Receive Date: 20150305
Handler Name: CLINTON IA - BRIDGE REALIGNMENT - JOHNSON WAREHOUSE DEMOLITION
Source Type: Notification
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 20140820
Handler Name: CLINTON IA - BRIDGE REALIGNMENT - JOHNSON WAREHOUSE DEMOLITION
Source Type: Notification
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20140821
Handler Name: CLINTON IA - BRIDGE REALIGNMENT - JOHNSON WAREHOUSE DEMOLITION
Source Type: Notification
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Waste Code Details

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY

VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: U051
Waste Code Description: CREOSOTE

Hazardous Waste Code: D005
Waste Code Description: BARIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Description History: The site is generally located on the southeast side of the intersection of Liberty Avenue and South 5th Street. The site historically contained various industrial developments including a lumberyard from approximately 1897 to 1902, an engineering company from 1925-1967, an automotive parts company from 1970 to 1980, a metal crafter business from 1985 to 1995 and a metal fabrication shop in 1999. Historical Sanborn maps and an interview with the property owner indicated the site had a foundry associated with the engine block manufacturers from approximately 1925 until 1980. Additionally, historical Sanborn maps indentify a railroad siding located on the property from 1897 to 1950. The site reconnaissance located the railroad siding but the property owner indicated it had not been used since he purchased the site around 1980. The site reconnaissance identified a large pit associated with the former foundry and numerous unlabeled 55-gallon drums throughout the facility, some of which were bulging.
Ready for Reuse Ind: No

NFA Certificate Sent:	2019-12-13 00:00:00	**Coordinator:**	Tammy Vander Bloemen
Legal Description:	See NFA certificate		
Technical Controls:	GROUNDWATER INGESTION--ORDINANCE: Soil or Groundwater contamination is present (or may be present in the future due to contaminant migration) at levels which if ingested by humans could present an unreasonable risk to health. The potential for exposure to this groundwater by installation of groundwater wells is being regulated by the following control: A city or county ordinance was in place at the time of issuance of this no further action certificate which regulates the installation of drinking and non-drinking water wells. The permitting authority has provided a non-binding certification that it is not likely to allow permitting of groundwater wells on this property because of the availability of a public water supply. If this ordinance is not maintained or is otherwise established to be ineffective, the 'no action required' classification may be rescinded.

St Tribal Prg ID No:	-
Description History:	Property operated as a Petroleum Bulk Storage and distribution facility from 1890s ~ 2003. The property was purchased by Troy Pucket at a tax sale and used as a pallet recycling facility and for automotive repairs. A July 2005 fire distroyed the building and contents. The fire department pushed in the building to prevent collapse. The property has remained unoccupied since that time and became an area dumping ground for tires, chemical containers and unwanted furniture.
Ready for Reuse Ind:	No

Description History:	The property was used for pallet manufacturing for ten years prior to its purchase by Mr. Puckett and prior to that it was a Skelly Oil Company bulk oil station with aboveground storage tanks for oil and diesel and oil storage inside the building in 55-gallon drums. The property has been vacant since July 29, 2005 due to a fire in the site building that resulted in an emergency demolition of the site building immediately thereafter.
Ready for Reuse Ind:	No

Legal Description: LOT SIX (6) IN BATHER'S SECOND SUBDIVISION OF OUTLOT ONE (1), IN IOWA LAND COMPANY'S WEST ADDITION TO THE CITY OF CLINTON, IOWA; AND LOT FIVE (5) AND THE NORTHEASTERLY SIX FEET (6') OF LOT FOUR (4) IN BATHER'S SECOND SUBDIVISION OF OUTLOT ONE (1), IN IOWA LAND COMPANY'S WEST ADDITION TO THE CITY OF CLINTON, IOWA.

Technical Controls: GROUNDWATER INGESTION--ORDINANCE: Soil or Groundwater contamination is present (or may be present in the future due to contaminant migration) at levels which if ingested by humans could present an unreasonable risk to health. The potential for exposure to this groundwater by installation of groundwater wells is being regulated by the following control:

A city or county ordinance was in place at the time of issuance of this no further action certificate which regulates the installation of drinking and non-drinking water wells. The permitting authority has provided a non-binding certification that it is not likely to allow permitting of groundwater wells on this property because of the availability of a public water supply. If this ordinance is not maintained or is otherwise established to be ineffective, the "no action required" classification may be rescinded.

NOTE: IF MONITORING WELLS MW-2A/B-2, MW-3/B-3, MW-6/B-6, MW-9/B-9, MW-10/B-10, OR MW-B ARE SUBSEQUENTLY LOCATED, THEY MUST BE PROPERLY ABANDONED IN ACCORDANCE WITH 567--39.8 OF THE IOWA ADMINISTRATIVE CODE.

Description History:	U.S. Post Office building was built circa 1902 and operated as post office until 1990. The property was sold in 1999 and has been used for storage since the post office closed. The roof has been leaking for years. The interior of the building has deteriorated and is considered blight. Property has high visibility and is located on a key corner of the downtown area. It is located in an Opportunity Zone. Once property is cleaned up and renovated it has the potential to be utilized for residential or commercial use.
Ready for Reuse Ind:	No

Description History: The property was previously an active and functioning YMCA with a pool and indoor exercise facility as well as offices. It was built in the early 1900s and then a significant addition was built in the 1960s. The YMCA is still an organization strictly because they own the property. The building is leased to the Victory Center for use as a men's shelter. They do not use the whole building, however, so a significant portion of the facility is vacant. The property has become blighted, with multiple nuisance complaints. It sits at a major intersection downtown and creates the perception of abandonment and blight. The city has identified the property as a historic restoration possibility, but the 1960's portion has dissuaded purchasers. The YMCA has offered this property at zero to no cost for an

interested local government or non-profit. Additional testing to confirm no impact on public health and for asbestos/lead is needed prior to redevelopment.

Description History: Residentially developed (c. 1897) with dwelling and automobile garage. Circa 1917, a coal storage structure was constructed along the south side of the property where the garage was previously occupied. An office for an adjacent coal company was located on the property in 1950. In 1967, an office, storage warehouse and metal contractor storage area was located on the property.

Description History:	This is the site of a 6-story office/commercial building, built in 1914. Located in downtown Clinton, the building has been underutilized, and mostly vacant, for the last 20 years. Costs for renovation, including asbestos inspection and abatement to facilitate remodeling, have hindered most purchasers. The non-profit "Rock Island Economic

Growth Corporation" seeks to acquire the building, renovate the interior, and market the building for lease as a 28-unit apartment building, with ground-floor commercial space. As pre-purchase environmental due diligence costs were a large undertaking to begin reviewing the feasibility of renovation investment, 128(a) funds were used to assist the non-profit applicant with this early stage of project review. The non-profit anticipates acquiring the site in late 2014, and upon investment of their own funds, and state and federal tax credit program awards, they will begin renovation in mid-2015.

Description of Events: DRIVER DEPARTED SHIPPER LOCATION 4/1 WITH A LOAD OF 46820 POUNDS OF SODIUM HYDROXIDE, 50%. AT DESTINATION 4/1, .3 MI AFTER CONSIGNEE WEIGHT SCALE AT CONSIGNEE LAB INSIDE CONSIGNEE PLANT, DRIVER NOTICED THAT A "FEW DRIPS" OF PRODUCT WERE VISIBLE COMING FROM THE HOSE ATTACHED TO THE AIR BLEED-OFF VALVE ON THE TANK TRAILER: "NOT A PUDDLE. DRIVER LOOKED BEHIND HIM, SAW NO PRODUCT ON THE GROUND/STREET OR ELSEWHERE. HOWEVER THE AIR BLEED-OFF VALVE WAS PARTIALLY OPEN. THE DRIVER COMPLETED CLOSURE OF THE AIR VALVE, COMPLETED DELIVERY. THE CONSIGNEE REPORTED THE SHIPPER ON APRIL 13 THAT PRODUCT WAS FOUND BY THE CONSIGNEE ON 4/1 ON THE GROUND WITHIN THE CONSIGNEE PLANT ON THE STREET BETWEEN THE WEIGHT SCALE AND THE LAB WHERE THE AIR VALVE WAS CLOSED. THIS AMOUNT WAS ESTIMATED BY THE CONSIGNEE TO BE TWENTY GALLONS. INVESTIGATION REVEALS THAT NET WEIGHT ON DEPARTURE FROM THE SHIPPER ON 4/1 WAS 46820 AND AT THE CONSIGNEE WEIGHT SCALE 4/1 WAS 46760. HUBOMETER DISTANCE WAS 4 MILES FROM SCALE TO SCALE. THE DIFFERENCE WAS 60 POUNDS, FUEL WAS ONE GALLON @ 7# PER GALLON, LADING WEIGHT 13# PER GALLON FOR A DIFFERENCE OF ABOUT FOUR GALLONS COULD BE LOST ON THE STREET FROM SHIPPER TO CONSIGNEE. AN INSPECTION OF THE ROUTE DID NOT REVEAL ANY EVIDENCE OF SUCH LOSS, BUT TIME ELAPSED WOULD BE A FACTOR. SINCE DISTANCE FROM WEIGHT SCALE INSIDE CONSIGNEE TO THE LAB WHERE VALVE WAS CLOSED WAS .3 MI IT SEEMS UNLIKELY THAT 20 GALLONS WERE LOST IN CONSIGNEE FACILITY. ALL VALVES ON THIS TRAILER WERE AREA PRESSURE TESTED ON APRIL 14 TO 50# AND FOUND TO BE WITHOUT LEAKS: 1) CAUSTIC LOADING PROCEDURES REVIEWED. THEY CONTAIN SPECIFIC INSTRUCTION TO CLOSING AIR BLEED-OFF AND AIR PRESSURE VALVES, AND AN ADDITIONAL SPECIFIC INSTRUCTION TO INSPECT AND VERIFY THAT ALL AIR VALVES ARE CLOSED. CHANGE: FORM BEING CHANGED TO INCLUDE A CHECK-OFF FORM WHICH LISTS ITEMS FOR CHECK-OFF BEFORE DEPARTURE, AND A SHIPPER SIGN-OFF WILL BE REQUIRED BEFORE TRUCK CAN LEAVE. 2) EXISTING TRAINING, WHICH SPECIFIES THAT ALL SPILLS OF ANY KIND ARE CLASSIFIED AS EMERGENCIES AT VERTEX CHEMICAL AND TO BE REPORTED IMMEDIATELY, HAS BEEN REPEATED IN PERSON BY PLANT MANAGER WITH ALL DRIVERS/CONTRACTORS. 3) VERTEX GAVE STEVE'S TRUCKING COUNSELING, WRITTEN WARNING THAT FUTURE INCIDENTS WILL DISQUALIFY THEM AS A CONTRACTOR TO VERTEX. 4) STEVE'S TRUCKING HAS GIVEN DRIVER COUNSELING, AND WRITTEN WARNING THAT FUTURE INCIDENTS WILL DISQUALIFY HIM AS A CONTRACTOR TO STEVE'S TRUCKING.

Description of Events: DURING OFF-LOADING, FREE LIQUID WAS OBSERVED ON THE TOP OF THE TOTE. SINCE THE MATERIAL WAS FLAMMABLE, OUR HAZARDOUS MATERIALS DEPARTMENT WAS CALLED WHO IN TURN

CONTACTED A LOCAL RESPONSE COMPANY TO ASSESS THE SITUATION. THE RESPONSE COMPANY FOUND THAT THE TOTE LID WAS LOOSE AND NOT PROPERLY SECURED BY THE ORIGINAL SHIPPER. THE LID WAS TIGHTENED AND FREE LIQUID CLEANED. THERE WAS NO FURTHER INCIDENT REGARDING THIS SHIPMENT.

Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19940616
Handler Name: MIDWEST UTILITY TRENCHING SERVICE
Source Type: Implementer
Federal Waste Generator Code: 3
Generator Code Description: Very Small Quantity Generator

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 19950731
Handler Name: MIDWEST UTILITY TRENCHING SERVICE
Source Type: Notification
Federal Waste Generator Code: N
Generator Code Description: Not a Generator, Verified

Waste Code Details

Hazardous Waste Code: F028
Waste Code Description: RESIDUES RESULTING FROM THE INCINERATION OR THERMAL TREATMENT OF SOIL CONTAMINATED WITH EPA HAZARDOUS WASTE NOS. F020, F021, F022, F023, F026, AND F027.

Hazardous Waste Code: F023
Waste Code Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OF MATERIALS ON EQUIPMENT PREVIOUSLY USED FOR THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- AND TETRACHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE WASTES FROM EQUIPMENT USED ONLY FOR THE PRODUCTION OR USE OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL.)

Hazardous Waste Code: F026
Waste Code Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OF MATERIALS ON EQUIPMENT PREVIOUSLY USED FOR THE MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TETRA-, PENTA-, OR HEXACHLOROBENZENE UNDER ALKALINE CONDITIONS.

Hazardous Waste Code: F027
Waste Code Description: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

Hazardous Waste Code: F020
Waste Code Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- OR TETRACHLOROPHENOL OR OF INTERMEDIATES USED TO PRODUCE THEIR PESTICIDE DERIVATIVES. (THIS LISTING DOES NOT INCLUDE WASTES FROM THE PRODUCTION OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL.)

Hazardous Waste Code: F022
Waste Code Description: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A

FORMULATING PROCESS) OF TETRA-, PENTA-, OR HEXACHLOROBENZENES UNDER ALKALINE CONDITIONS.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 30, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 30, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 30, 2022

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Apr 27, 2022

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Apr 27, 2022

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Apr 11, 2022

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Apr 11, 2022

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Apr 11, 2022

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Apr 11, 2022

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Apr 11, 2022

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Apr 11, 2022

RCRA Sites with Controls: RCRA CONTROLS

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Apr 11, 2022

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Dec 30, 2021

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Dec 30, 2021

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites: NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Mar 30, 2022

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Dec 31, 2021

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 20, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Delisted Facility Response Plans: DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 31, 2021

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Feb 4, 2022

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Feb 4, 2022

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Apr 27, 2022

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: May 3, 2022

State

Registry of Hazardous Waste or Hazardous Substance Disposal Sites: SHWS

The Iowa Department of Natural Resources (DNR) maintains a list of hazardous waste disposal sites in their Hazardous Substance Remedial Fund and Sites Registry. The hazardous disposal sites have been plotted using Township, Section and Range and display approximate locations. This database is state equivalent CERCLIS.

Government Publication Date: Dec 16, 2021

Removed from the Registry of Hazardous Waste or Hazardous Substance Disposal Sites: DEL SHWS

A list of sites that have been delisted or removed from the Registry of Hazardous Waste or Hazardous Substance Disposal Sites. This list was made available by the Department of Natural Resources (DNR). This database is state equivalent CERCLIS.

Government Publication Date: Dec 30, 2021

Delisted Registry of Hazardous Waste or Hazardous Substance Disposal Sites: DELISTED SHWS

List of sites which once appeared on - and have since been removed from - either the Hazardous Substance Remedial Fund and Sites Registry, or the list of sites removed from it, made available by the Iowa Department of Natural Resources (DNR). The hazardous disposal sites have been plotted using Township, Section and Range and display approximate locations.

Government Publication Date: May 9, 2022

Contaminated Sites in Iowa: CONT

The Contaminated Sites Section of the Iowa Department of Natural Resources (DNR) deals with a range of situations that involve contamination caused by a release of hazardous materials or hazardous waste products.

Government Publication Date: May 9, 2022

Solid Waste Management Facilities with Permits by the Iowa DNR: SWF/LF

The Iowa Department of Natural Resources (DNR) regulates the operation of facilities that manage, process and dispose solid waste. These facilities include sanitary landfills, appliance demanufacturing facilities, transfer stations, land application sites, incinerators, composting facilities, household hazardous materials sites, waste tire management and material recovery facilities. It includes all sites which are permitted or have had permits. It does not include non-permitted closed dumps.

Government Publication Date: Jan 15, 2021

Leaking Underground Storage Tank Sites in Iowa: LUST

A list of Leaking Underground Storage Tank (LUST) sites where petroleum contamination has been found. This list was made available by a joint venture of the Iowa Department of Natural Resources (DNR) and the Public Safety State Fire Marshal Office (SFM).

Government Publication Date: Mar 8, 2022

Leaking Aboveground Storage Tanks: LAST

A list of leaking aboveground storage tank (LAST) sites made available by the Iowa Department of Natural Resources (DNR).

Government Publication Date: May 9, 2022

Delisted Leaking Storage Tanks: DELISTED LST

List of sites removed from either the Leaking Underground Storage Tank (LUST) sites list or the Leaking Aboveground Storage Tank (LAST) sites list made available by the Iowa Department of Natural Resources (DNR).

Government Publication Date: May 9, 2022

Underground Storage Tanks in Iowa: UST

The Underground Storage Tanks (UST) Section of the Department of Natural Resources (DNR) is responsible for the regulation of underground storage tank systems used for the storage of regulated substances, primarily petroleum products.

Government Publication Date: Mar 8, 2022

Aboveground Storage Tanks: AST

A list of aboveground storage tanks (AST) that contain primarily the aboveground storage of combustible or flammable products. This list is maintained by a joint venture between the Iowa Department of Natural Resources (DNR) and the Public Safety State Fire Marshal Office (SFM).

Government Publication Date: Oct 26, 2017

Aboveground Storage Tanks (State Fire Marshal): SFM AST

A list of aboveground storage tanks (AST) that primarily store combustible or flammable liquids. Aboveground petroleum storage tanks that are greater than 1,100 gallons in capacity must be registered with the state fire marshal's office. This list is provided by the Iowa Department of Public Safety's State Fire Marshal Division (SFM).

Government Publication Date: Apr 1, 2022

Delisted Storage Tanks: DELISTED TANK

This database contains a list of storage tank sites that were removed by the Department of Natural Resources (DNR) from Storage Tanks Section.

Government Publication Date: Apr 1, 2022

Sites with Institutional Controls: INST

A list of sites in the Land Recycling Program (LRP) that have Institutional Controls in place. This list was made available by the Iowa Department of Natural Resources (DNR).

Government Publication Date: May 9, 2022

Land Recycling Program Sites: VCP

The Land Recycling Program (LRP) of the Iowa Department of Natural Resources (DNR) allows owners or other stakeholders of a property to voluntarily assess and implement remedial actions at a site that is contaminated or is perceived to be contaminated. The assessment of the property must address the severity of the contamination problems and the risks associated with the contamination.

Government Publication Date: May 9, 2022

Brownfields Sites Listing: BROWNFIELDS

Brownfields are abandoned, idled, or under-used industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. The Iowa Department of Natural Resources (DNR) tracks brownfield sites as well as targeted brownfields assessment sites.

Government Publication Date: May 9, 2022

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 7, which include Iowa. There are no LUST records in Iowa at this time.

Government Publication Date: Oct 12, 2017

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 7, which include Iowa.

Government Publication Date: Oct 12, 2021

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 12, 2021

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 13, 2021

County

No County standard environmental record sources available for this State.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Aug 24, 2021

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Aug 24, 2021

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Jan 11, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.
Government Publication Date: Jul 20, 2020

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations https://pfasproject.com/pfas-contamination-site-tr acker/
Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills: ERNS PFAS

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.
Government Publication Date: Feb 23, 2022

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.
Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.
Government Publication Date: Nov 22, 2021

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).
Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.
Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.
Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Mar 30, 2022

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Jan 15, 2022

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 5, 2021

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 5, 2021

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: May 26, 2021

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 2, 2021

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

Uranium Mill Tailings Radiation Control Act Sites: URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: May 16, 2022

Superfunds Consent Decrees: CONSENT DECREES

A list of Superfund consent decrees made available by the Department of Justice, Environment & Natural Resources Division (ENRD).

Government Publication Date: Sep 30, 2018

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers: PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Jan 20, 2022

State

Spill incidents reported to Iowa DNR and tracked in the Hazardous Substance Incident database: SPILLS

Spill incidents reported to the Iowa Department of Natural Resources (DNR) and tracked in the Hazardous Substance Incident database.

Government Publication Date: May 11, 2022

Dry Cleaning Facilities: DRYCLEANERS

A listing of drycleaners in Iowa. This is maintained by Iowa's Department of Natural Resources's Air Bureau Quality.

Government Publication Date: Mar 17, 2022

Delisted Drycleaners: DELISTED DRYCLEANERS

List of sites which onece appeared on - and have since been removed from - the list of drycleaners made available by Iowa's Department of Natural Resources Air Quality Bureau.

Government Publication Date: Mar 17, 2022

Air Permitted Facilities: AIR PERMITS

The Iowa Department of Natural Resources (DNR) maintains this list of facilities with operating permits for Title V of the Federal Clean Air Act, as well as facilities required to submit an air emissions inventory, and other facilities with air quality interest such as Feed Mills, Group 1 Grain Elevators, and Permit By Rule (PBR) Spray Booths.

Government Publication Date: Mar 1, 2022

Per- and Polyfluoroalkyl Substances (PFAS) Release: PFAS RELEASE

A list of potential PFAS users queried from the Iowa Department of Natural Resources EPCRA database (Emergency Planning and Community Right-to-Know Act of 1986).

Government Publication Date: Jan 13, 2021

Liens Filed Listing: LIENS

A listing of liens tracked by Aon Risk Solutions.

Government Publication Date: Mar 17, 2022

Tier 2 Report: TIER 2

A list of Tier 2 facilities - entities that store chemicals and are required to report them under the Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986. This list is made available by the Iowa Department of Natural Resources (DNR).

Government Publication Date: Mar 22, 2022

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental record sources available for this State.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX D

SUPPORTING DOCUMENTS

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

This questionnaire has been developed for the User of the Phase I Environmental Site Assessment. The "User" is generally the party seeking to use the Phase I ESA pursuant to the Practice E 1527-13 (ASTM E 1527-13) and may include, without limitation, a prospective purchaser or prospective tenant of the property, an owner of the property, a lender, or a property manager.

The User must provide information, if available, to the environmental professional performing the Phase I ESA in the form of responses to the following questions to qualify for Landowner Liability Protections (LLPS) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001. Failure to provide this information, if available, could result in a determination that "all appropriate inquiry" is not complete.

Interviewees are requested to answer the following questions in good faith and to the best of their actual knowledge. The property for which the Phase I ESA is being performed may be referred to as the property or site within this questionnaire.

QUESTIONS FOR THE USER (CLIENT)

Please write your answer indicating yes or no to the following questions, and provide additional detail for "yes" responses.

1) What is the reason why the Phase I ESA is required?

2) What is the current and propose future use of the property?

3) Have you engaged a title company or professional to review recorded land title records and lien records? If yes, also describe the review and the results.

4) Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

5) Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

6) As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

7) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

8) Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

(a.) Do you know the past uses of the *property*?

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

9) As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

QUESTIONS FOR THE USER (CLIENT)

Please write your answer indicating yes or no to the following questions, and provide additional detail for "yes" responses.

1) What is the reason why the Phase I ESA is required?

City of Clinton is looking to purchase portion of property however would like Phase I prior to determine if any environmental concern

2) What is the current and propose future use of the property?

Vacant - building located on 4th St to be abated and possibly demolished to make site ready for reuse

3) Have you engaged a title company or professional to review recorded land title records and lien records? If yes, also describe the review and the results.

no, city of Clinton would be responsible for this prior to purchase property

4) Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

no

5) Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

no

6) As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

no

7) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

unsure of purchase price

8) Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

(a.) Do you know the past uses of the *property*?

no

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

no

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

no

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

no

9) As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

possible asbestos containing material given age of structure; site may have had an underground storage tank according to prior assessment work

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

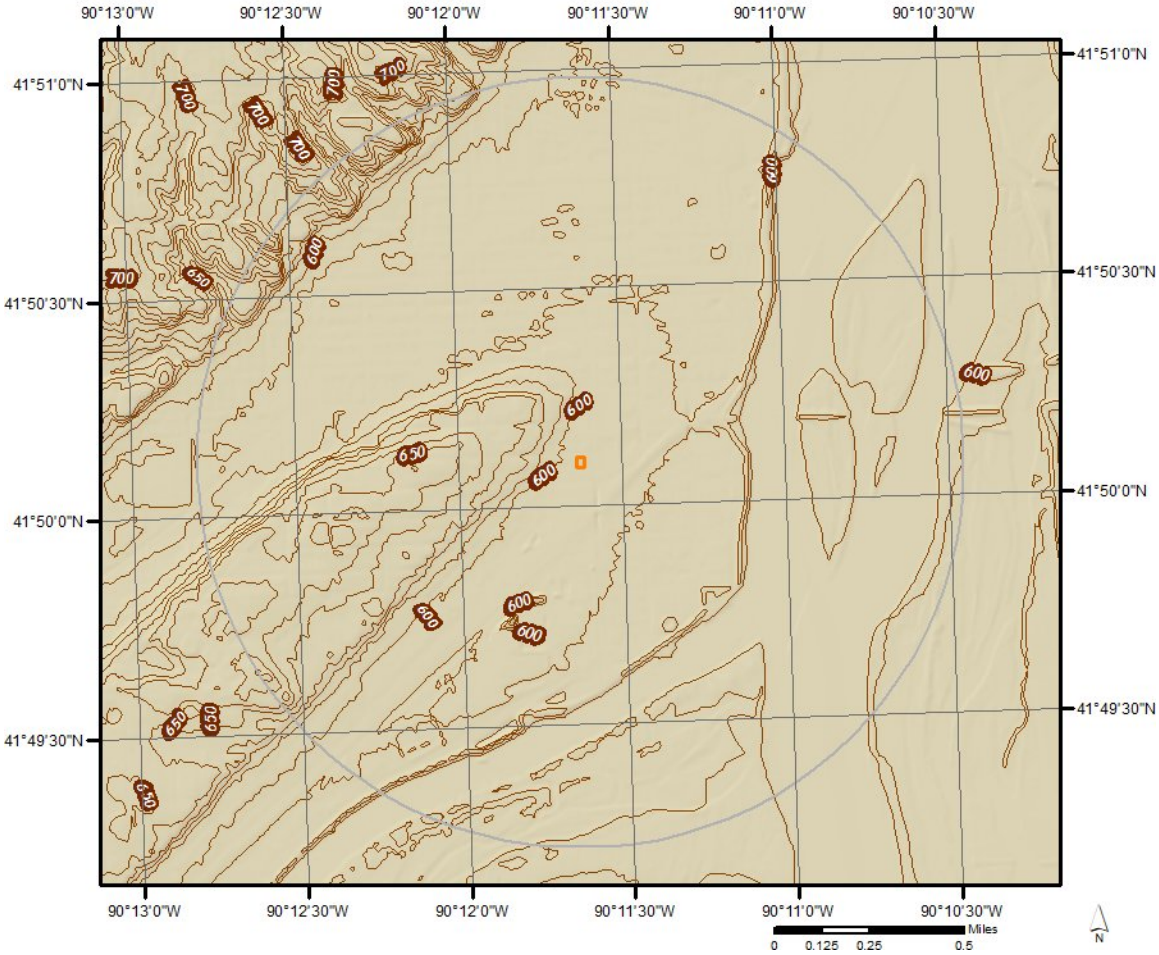
Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo (2015)

Quadrangle(s): Clinton, IA



Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

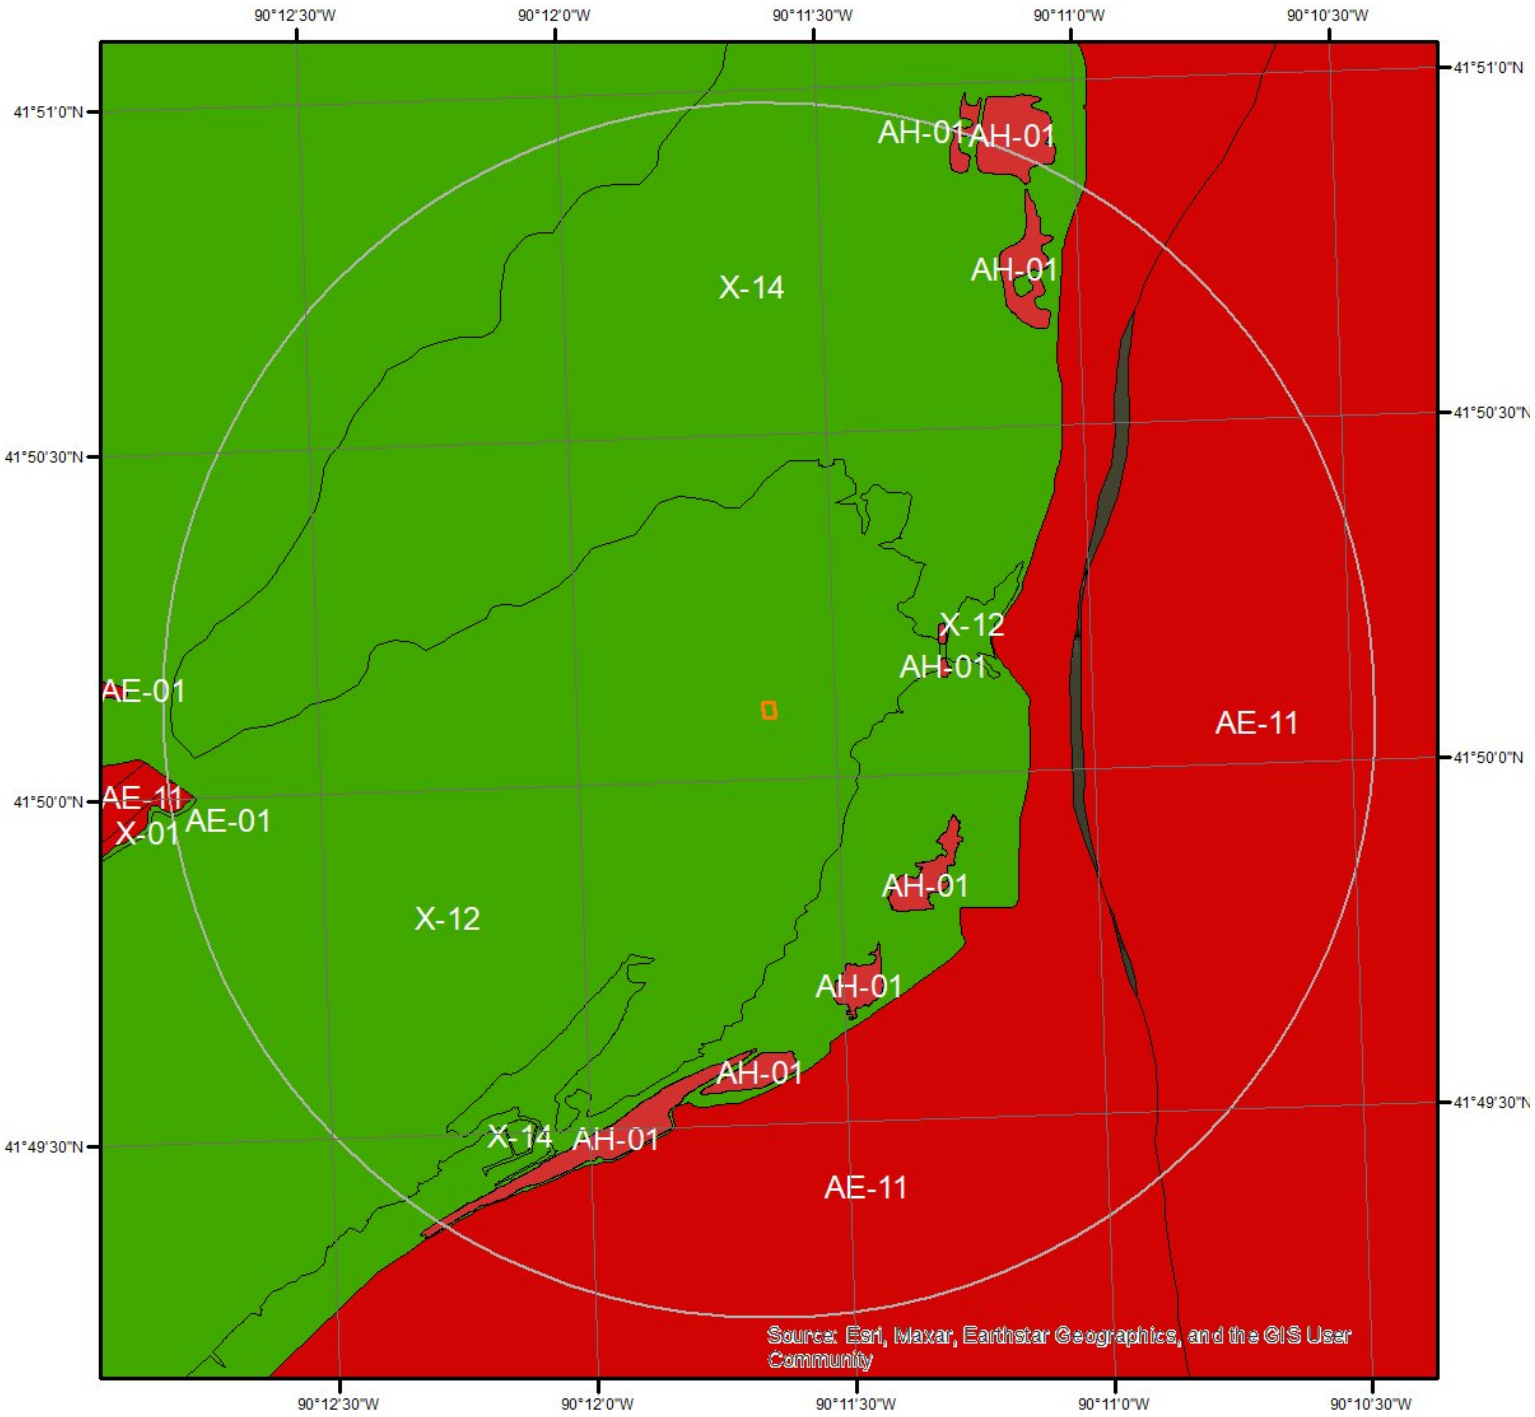
Topographic information at project property:

Elevation:	597.47 ft
Slope Direction:	ESE

Hydrologic Information

Wetland

0 0.075 0.15 0.3 Miles



N

This map shows wetland existence using data from US Fish & Wildlife.
Data coverage is shown to the right. Gray indicates no data available in the area.

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

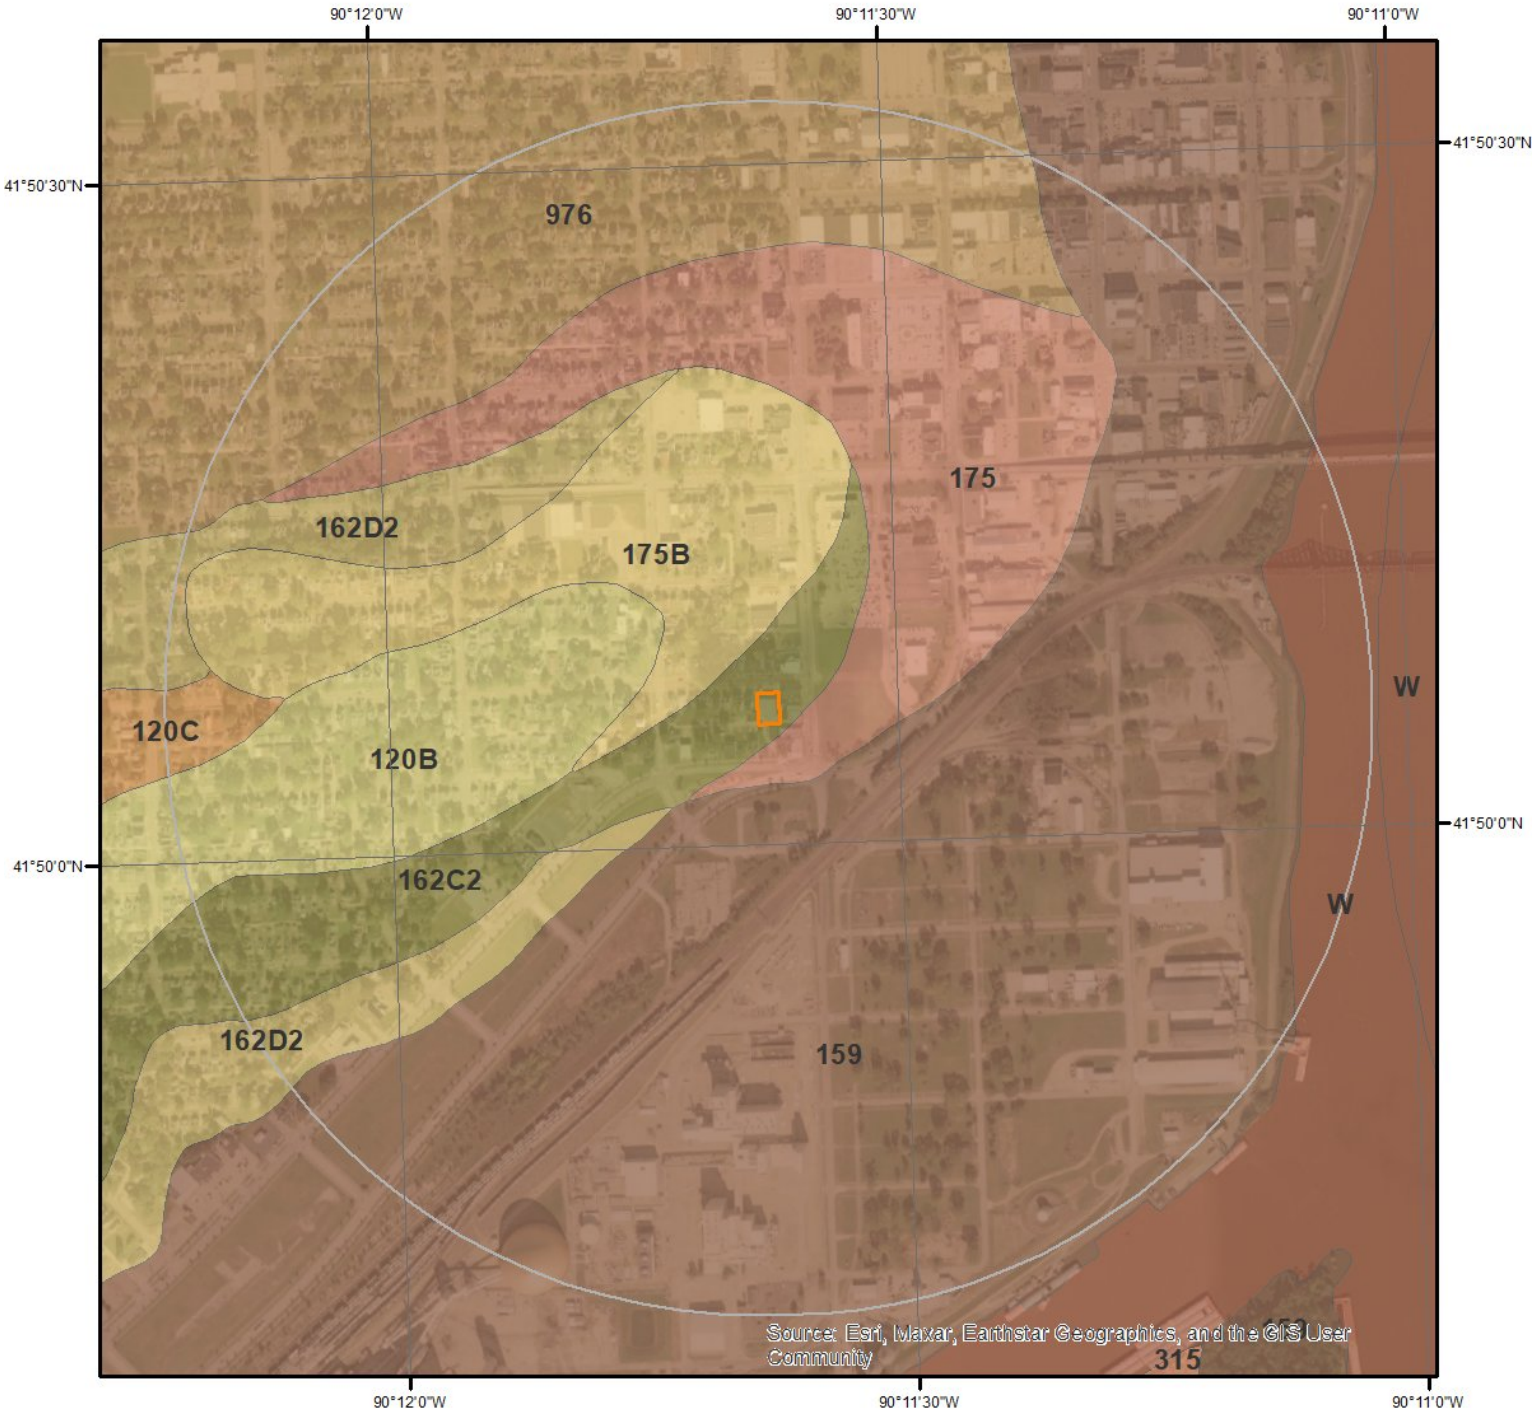
0 0.275 0.55 Miles

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Om

Unit Name:	Maquoketa Formation
Unit Age:	Phanerozoic | Paleozoic | Ordovician-Late [Cincinnatian]
Primary Rock Type:	shale
Secondary Rock Type:	dolostone (dolomite)
Unit Description:	Predominantly grayish-green shale in east-central area; predominantly brown dolomite and chert in the subsurface of north-central and western areas; red shale with limonite or hematite pellets (Neda) occurs locally at top.



Geologic Unit Sn

Unit Name:	Niagaran Series
Unit Age:	Phanerozoic | Paleozoic | Silurian
Primary Rock Type:	dolostone (dolomite)
Secondary Rock Type:	chert
Unit Description:	Gower Dolomite- LeClaire (reef phase) tough, greenish-blue dolomite; Anamosa (inner-reef) soft, yellowish-brown, thin-bedded dolomite. Hopkinton Dolomite- light colored dolomite with nodular chert.

Geologic Unit Sa

Unit Name:	Alexandrian Series
Unit Age:	Phanerozoic | Paleozoic | Silurian
Primary Rock Type:	dolostone (dolomite)
Secondary Rock Type:	chert
Unit Description:	Kankakee Formation- light colored dolomite; contains much interbedded chert. Approx thickness 155 ft. Englewood Dolomite- gray, sandy, silty, argillaceous dolomite. Approx thickness 55 ft

ERIS

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 120B (1.74%)

Map Unit Name:	Tama silt loam, 2 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Tama(95%)

horizon H1(0cm to 48cm)	Silt loam
horizon H2(48cm to 112cm)	Silty clay loam
horizon H3(112cm to 152cm)	Silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 121B - Tama silt loam, driftless, 2 to 6 percent slopes

Component: Tama (90%)
The Tama component makes up 90 percent of the map unit. Slopes are 2 to 6 percent. This component is on ridges on uplands. The parent material consists of loess. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 2e. This soil does not meet hydric criteria.

Component: Muscatine (5%)
Generated brief soil descriptions are created for major soil components. The Muscatine soil is a minor component.

Component: Dinsdale (5%)
Generated brief soil descriptions are created for major soil components. The Dinsdale soil is a minor component.

Map Unit 120C (0.56%)

Map Unit Name:	Tama silt loam, 5 to 9 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Tama(100%)

horizon H1(0cm to 48cm)	Silt loam
horizon H2(48cm to 112cm)	Silty clay loam
horizon H3(112cm to 152cm)	Silty clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 121C - Tama silt loam, driftless, 5 to 9 percent slopes

Soil Information

Component: Tama (90%)
The Tama component makes up 90 percent of the map unit. Slopes are 5 to 9 percent. This component is on ridges on uplands. The parent material consists of loess. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Dinsdale (5%)
Generated brief soil descriptions are created for major soil components. The Dinsdale soil is a minor component.

Component: Tama (5%)
Generated brief soil descriptions are created for major soil components. The Tama soil is a minor component.

Map Unit 159 (6.71%)

Map Unit Name:	Finchford loamy sand, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
Finchford(100%)	
horizon H1(0cm to 79cm)	Loamy sand
horizon H2(79cm to 152cm)	Loamy sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 159 - Finchford loamy sand, 0 to 2 percent slopes

Component: Finchford (100%)
The Finchford, rarely flooded component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces on river valleys. The parent material consists of sandy and gravelly alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4s. This soil does not meet hydric criteria.

Map Unit 162C2 (0.56%)

Map Unit Name:	Downs silt loam, 5 to 9 percent slopes, moderately eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.
Major components are printed below	
Downs(85%)	
horizon Ap(0cm to 20cm)	Silt loam
horizon BE(20cm to 43cm)	Silt loam
horizon Bt1, Bt2(43cm to 84cm)	Silty clay loam
horizon Bt3(84cm to 99cm)	Silt loam
horizon BC(99cm to 122cm)	Silt loam
horizon C(122cm to 200cm)	Silt loam

Soil Information

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 162C2 - Downs silt loam, 5 to 9 percent slopes, moderately eroded

Component: Downs (85%)
The Downs, moderately eroded component makes up 85 percent of the map unit. Slopes are 5 to 9 percent. This component is on hillslopes on uplands. The parent material consists of loess. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Newvienna (5%)
Generated brief soil descriptions are created for major components. The Newvienna soil is a minor component.

Component: Downs (5%)
Generated brief soil descriptions are created for major components. The Downs soil is a minor component.

Component: Nasset (5%)
Generated brief soil descriptions are created for major components. The Nasset soil is a minor component.

Map Unit 162D2 (0.69%)

Map Unit Name:	Downs silt loam, 9 to 14 percent slopes, moderately eroded
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Downs(80%)

horizon Ap(0cm to 20cm)	Silt loam
horizon BE(20cm to 43cm)	Silt loam
horizon Bt1, Bt2(43cm to 84cm)	Silty clay loam
horizon Bt3(84cm to 99cm)	Silt loam
horizon BC(99cm to 122cm)	Silt loam
horizon C(122cm to 200cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 162D2 - Downs silt loam, 9 to 14 percent slopes, moderately eroded

Component: Downs (80%)
The Downs, moderately eroded component makes up 80 percent of the map unit. Slopes are 9 to 14 percent. This component is on hillslopes on uplands. The parent material consists of loess. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria.

Component: Newvienna (5%)
Generated brief soil descriptions are created for major components. The Newvienna soil is a minor component.

Component: Downs (5%)
Generated brief soil descriptions are created for major components. The Downs soil is a minor component.

Component: Nasset (5%)

Soil Information

Generated brief soil descriptions are created for major components. The Nasset soil is a minor component.

Component: Downs (5%)
Generated brief soil descriptions are created for major components. The Downs soil is a minor component.

Map Unit 175 (0.59%)

Map Unit Name:	Dickinson fine sandy loam, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Dickinson(100%)

horizon Ap(0cm to 20cm)	Fine sandy loam
horizon A1, A2(20cm to 46cm)	Fine sandy loam
horizon Bw1, Bw2(46cm to 76cm)	Fine sandy loam
horizon BC(76cm to 91cm)	Loamy sand
horizon C(91cm to 152cm)	Sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 175 - Dickinson fine sandy loam, 0 to 2 percent slopes

Component: Dickinson (95%)
The Dickinson component makes up 95 percent of the map unit. Slopes are 0 to 2 percent. This component is on dunes on dissected till plains. The parent material consists of sandy eolian deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R108CY506IA Sandy Upland Prairie Schizachyrium Scoparium-oenothera Rhombipetala (little Bluestem-fourpoint Evening Primrose) ecological site. Nonirrigated land capability classification is 3s. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Sparta (5%)
Generated brief soil descriptions are created for major soil components. The Sparta soil is a minor component.

Map Unit 175B (0.41%)

Map Unit Name:	Dickinson fine sandy loam, 2 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Dickinson(95%)

horizon Ap(0cm to 20cm)	Fine sandy loam
horizon A1, A2(20cm to 46cm)	Fine sandy loam
horizon Bw1, Bw2(46cm to 76cm)	Fine sandy loam
horizon BC(76cm to 91cm)	Loamy sand
horizon C(91cm to 152cm)	Sand

Component Description:

Soil Information

Minor map unit components are excluded from this report.

Map Unit: 175B - Dickinson fine sandy loam, 2 to 5 percent slopes

Component: Dickinson (95%)
The Dickinson component makes up 95 percent of the map unit. Slopes are 2 to 5 percent. This component is on dunes on dissected till plains. The parent material consists of sandy eolian deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 2 percent. This component is in the R108CY506IA Sandy Upland Prairie Schizachyrium Scoparium-oenothera Rhombipetala (little Bluestem-fourpoint Evening Primrose) ecological site. Nonirrigated land capability classification is 3e. This soil does not meet hydric criteria. There are no saline horizons within 30 inches of the soil surface.

Component: Sparta (5%)
Generated brief soil descriptions are created for major soil components. The Sparta soil is a minor component.

Map Unit 976 (7.46%)

Map Unit Name:	Raddle silt loam, 0 to 2 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

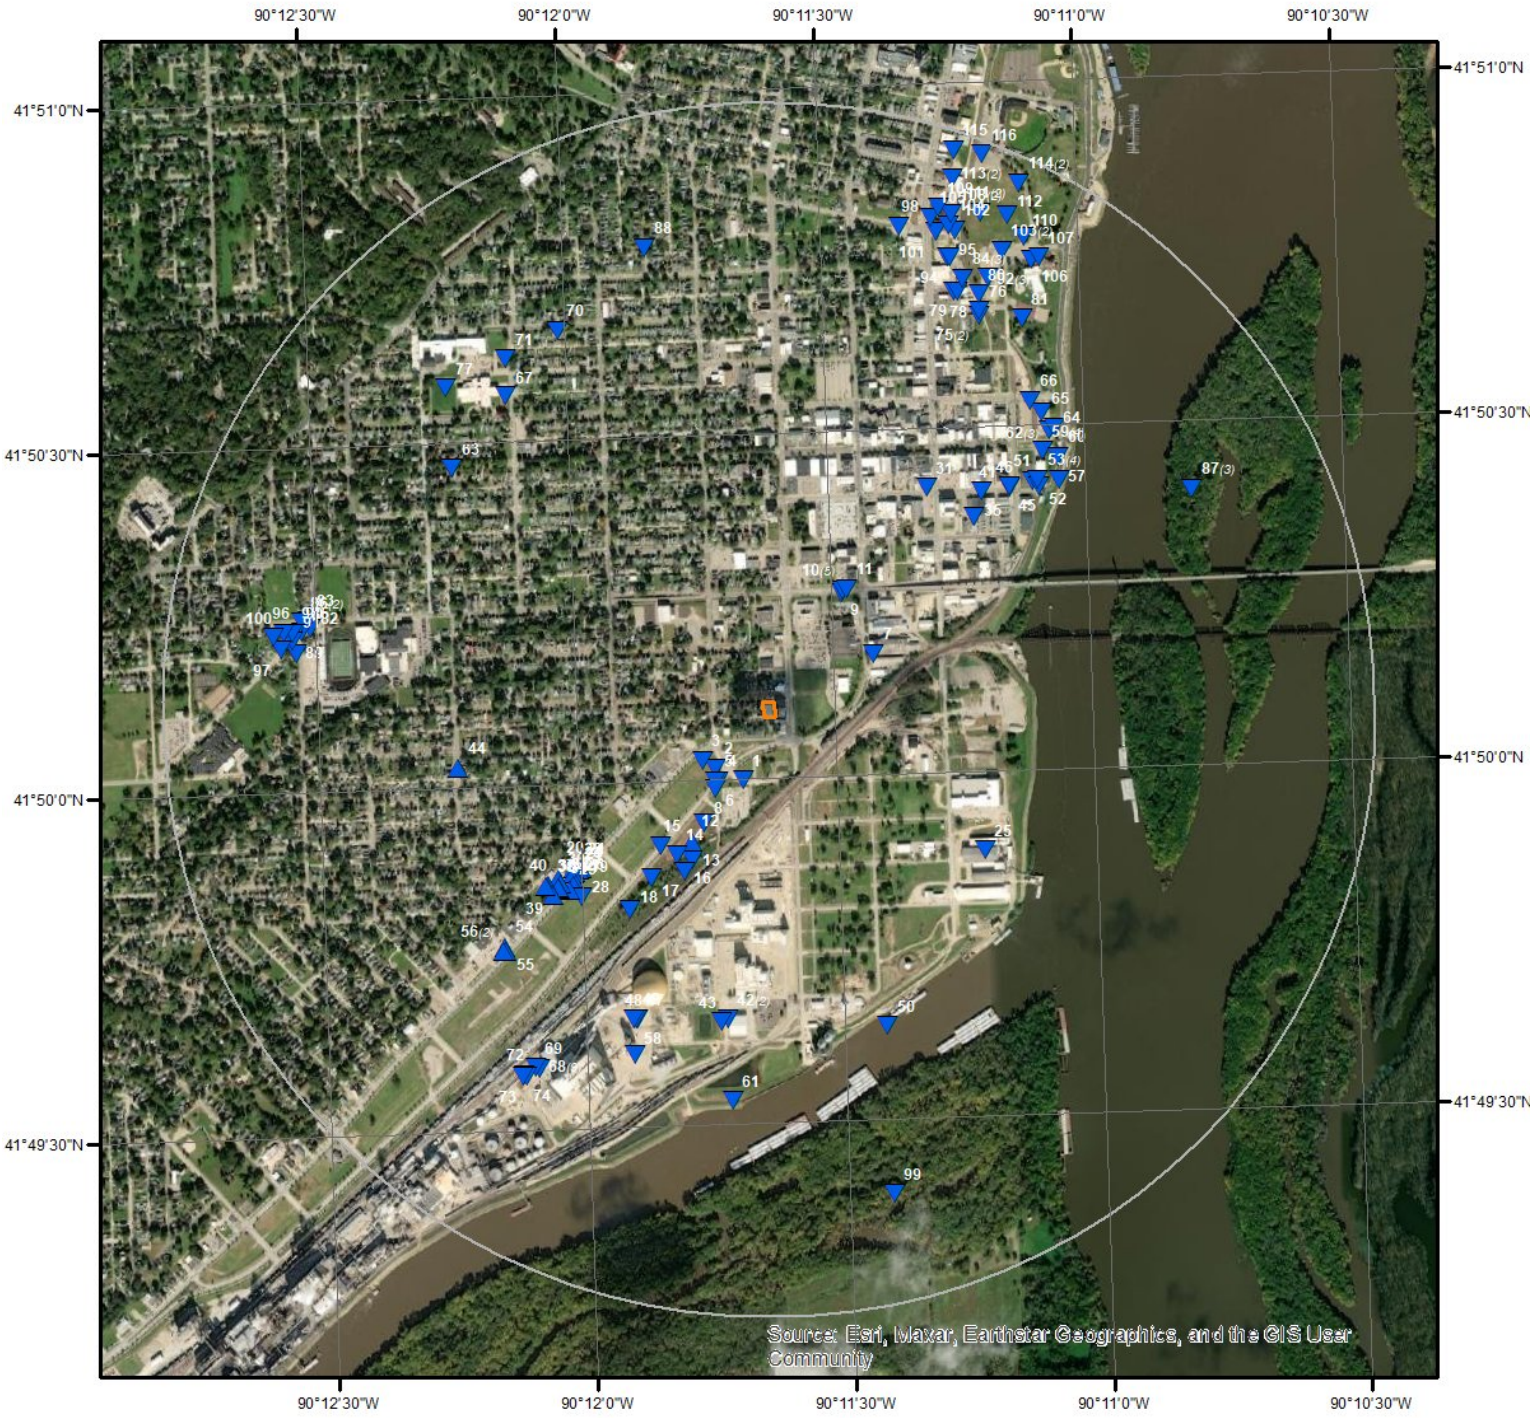
Raddle(100%)

horizon H1(0cm to 48cm)	Silt loam
horizon H2(48cm to 152cm)	Silt loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 976 - Raddle silt loam, 0 to 2 percent slopes



Component: Raddle (100%)
The Raddle component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on stream terraces on river valleys. The parent material consists of silty alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is very high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 1. This soil does not meet hydric criteria.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *CLINTON* County: **1**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L
Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L
Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *CLINTON* County

No Measures/Homes:	15
Geometric Mean:	3.9
Arithmetic Mean:	6.5
Median:	4.8
Standard Deviation:	6.2
Maximum:	22.9
% >4 pCi/L:	60
% >20 pCi/L:	7
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of Iowa conducted during 1988-89. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells — **OGW**

As of IA state regulatory agencies, FracTracker Alliance - state of Iowa confirmed not to have any active

(drilled but not plugged) oil and gas wells.

Public Water Supply Wells **PWSW**

The Public Water Supply Wells (PWSW) data consist of all the community water supply wells in Iowa. This data was made available by Iowa Department of Natural Resources.

Water Well Database **WATER WELLS**

List of water well locations made available by the Iowa Department of Natural Resources. This listing is a compilation of records from various well databases including the Geologic Sampling Points database, the Safe Drinking Water Information System (SDWIS) Wells database, and the Water Allocation Compliance and Online Permitting (WACOP) database.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

1.0 EXECUTIVE SUMMARY

1.1 Property Description

Impact7G, Inc. (Impact7G) was retained by City of Clinton (User) to conduct a Phase I Environmental Site Assessment (ESA), in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312)) for the property located at 1000-1004 S. 4th Street, Clinton, Clinton County, Iowa 52732 (Property). Any exceptions to, or deletions from, this practice are described in Sections 2.4, 6.1 and 12.0 of this report.

The Property is currently owned by Daniel and Margaret Keis (1000 S. 4th Street), JP Rental Development LLC (1002 S. 4th Street), and SAP Rentals LLC Series 1 (1004 S. 4th Street). The Property is located in a primarily residential/commercial area of Clinton, Iowa (Figure 2, Appendix A). The building at 1000 S. 4th St. consists of an approximate 4,140 square foot commercial building (calculated as two-story building) situated on approximately 0.12 acres of land. The existing structure was originally constructed circa 1864. The building at 1002 S. 4th St. consists of an approximate 5,130 square foot vacant/abandoned commercial building (calculated as two-story building) situated on approximately 0.06 acres of land. The existing structure was originally constructed circa 1868. The building at 1004 S. 4th St. consists of an approximate 4,676 square foot commercial building (calculated as three-story building) situated on approximately 0.05 acres of land. The existing structure was originally constructed circa 1900.

The Property is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' to POB	Commercial
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

The adjacent properties consist of the following:

Direction From Property	Description(s)
North	10th Ave. S. and commercial development
East	S 4th St. followed by undeveloped land
South	Unoccupied commercial building (1006 S. 4th St.) followed by alley, followed by commercial development
West	Alley followed by commercial development and residential development

1.2 Findings/Conclusions

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-13 as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment*."

- One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

- A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a REC to the Property.

- According to historic documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain place subject to the implementation of required controls*."

- Clinton Car Company, identified by Leak #9LTI80, is located 0.041 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2003. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- City of Clinton Property #2, identified by Leak #9LTL91, is located 0.076 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2007. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Public Works Street Division, identified by Leak #8LTB45, is located 0.096 miles east off the Property in a down-gradient location. The site has a regulatory status of "No Further Action" in 1990. Based on the regulatory status and down-gradient location, this LUST

site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hy-Vee Gas, identified by Leak #8LTA62, is located 0.112 miles east-northeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2014. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hair-Itage Designs & Raufsenberger Apartments LLC, identified by Leak #9LTL89, is located 0.118 miles south-southwest of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2016. According to the NFA Certificate, residual free product remains onsite. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-13 as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the [P]roperty and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the [P]roperty to any required controls*."

- No HRECs were identified as part of this Phase I ESA.

De Minimis Conditions are defined by the ASTM Standard Practice E1527-13 as "*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies*."

- No De Minimis Conditions were identified as part of this Phase I ESA

Non-Scope ASTM Considerations are described by the ASTM Standard Practice E1527-13 as "*environmental issues or conditions at a Property that parties may wish to assess in connection with commercial real estate that are outside the scope of [ASTM Standard Practice E1527-13].*"

- Two Non-Scope ASTM Considerations were included as part of this Phase I ESA. Impact7G believes, based on the 1864-1900 construction dates of the buildings located on the Property, the risk of Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) exposure is possible. Therefore, further ACM and LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

1.3 Professional Opinion

Based on data gathered during this Phase I ESA, Impact7G believes that further investigation is warranted for the Property at this time. Soil and/or groundwater sampling should be conducted to determine the presence of chemicals of concern, including but not limited to, volatile organic compounds (VOCs), Resource Conservation & Recovery Act (RCRA) Metals, semi-volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), and petroleum contaminates. Additionally, ACM and LBP sampling and testing should be conducted for the structures on the Property if renovation (ACM and LBP) or demolition (ACM) activities are

expected. Please refer to Figure 2 in Appendix A for the location of the identified RECs.

2.0 INTRODUCTION

Impact7G was retained by City of Clinton (User) to conduct a Phase I ESA, in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for AAI (40 CFR Part 312) for the Property located at 1000-1004 S. 4th Street, Clinton, Clinton County, Iowa 52732 (Property). Three addresses/buildings are associated with the Property.

According to the Clinton County Assessor's website, the Property's legal description is as follows:

(1000 S. 4th St) SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB

(1002 S. 4th St.) SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG

(1004 S. 4th St.) SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19

2.1 Scope of Services

The purpose of this assessment is to identify potential environmental liabilities in association with hazardous substances and/or petroleum products at or in the vicinity of the Property. The User contracted with Impact7G to conduct a Phase I ESA for the Property. Impact7G performed or attempted to perform the following services:

- Visual inspection of the Property and adjoining properties
- Interviews with past and present owners, operators, and occupants
- Reviews of historical sources
- Reviews of federal, state, tribal, and local government records
- Vapor Encroachment Screen of the Property

2.2 Significant Assumptions

The following assumption was used in the determination of potential RECs at the Property:

- The Mississippi River is located 0.42 miles east of the Property and flows to the south. Therefore, groundwater at the Property and adjacent properties is assumed to flow east-southeast in the general direction of the Mississippi River and topographically lower elevations.

2.3 Limitations and Exceptions

Any conclusions regarding potential environmental risks or particular events and practices are limited by the quality and quantity of information provided by available historical documents; the visual inspection; available government databases; and interviews with Property owners, Property operators, former Property owners and residents.

Pursuant to Section 13.1.5 of ASTM Standard Practice E1527-13, the following is a list of non-scope considerations that the User may want to assess in connection with commercial real estate transactions. No implication is intended as to the relative importance of inquiry into such non-scope considerations, and this list is not intended to be all-inclusive:

- Asbestos Containing Materials
- Industrial Hygiene

- Biological Agents
- Cultural and Historic Resources
- Ecological Resources
- Endangered Species
- Health and Safety
- Indoor Air Quality
- Property Condition Assessment
- Archeological Review
- Lead-Based Paint
- Lead in Drinking Water
- Mold

The information and conclusions presented in this report are based solely on the observations made during the site assessment evaluation and on data provided by others (individuals – entities). Thus, the accuracy of the resulting reporting and conclusions drawn from this information is inherently based on the accuracy of the information that was obtained and provided. The conclusions and opinions stated herein do not represent or warrant that the Property is free from contamination, pollution, or environmental problems. In summary, there is always a possibility that some contamination may be present on the Property of interest which was not discovered or noted during the Phase I ESA activities (walkover inspection, records review) conducted by Impact7G. Therefore, no guarantees or warranties as to the condition of the Property of interest or suitability of Property use for any particular purpose are made or implied by Impact7G.

2.4 Special Terms and Conditions

Contractual terms, conditions, and liability limitations are specified in the contract between the User and Impact7G.

Information used to prepare this report was provided by a number of parties including government agencies, third party vendors, and persons familiar with the site. All information reviewed was not independently verified unless actual knowledge of Property conditions or history indicated obvious inconsistencies or errors.

2.5 User Reliance

This report has been prepared on behalf of and for the exclusive use of City of Clinton (User) solely for use in evaluating the potential “recognized environmental conditions” and is not intended for any other purpose nor the benefit or use of any other person. This report and the findings contained herein shall not in whole or in part, be disseminated or conveyed to any other party, nor used by any other person, in whole or in part, without the prior written consent of Impact7G, except that the report may be conveyed to persons or groups of persons within the government of the City of Clinton.

3.0 PROPERTY DESCRIPTION

3.1 Location and Legal Description

The Property consists of three adjoining parcels with different addresses, legal locations, and ownership.

The parcel located at 1000 S. 4th St. is currently owned by Daniel and Margaret Keis. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 4,140 square foot commercial building (calculated as two-stories) situated on approximately 0.12 acres of land. The existing structure

located on the parcel was originally constructed circa 1864.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB	Commercial

The parcel is grouped with an adjacent property at 413 10th Avenue South by the Clinton County Assessor. The Property is on a distinct lot and the building does not physically connect to the building at 413 10th Avenue South

The parcel located at 1002 S. 4th St. is currently owned by JP Rental Development LLC. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 5,130 square foot commercial building (calculated as two-stories) situated on approximately 0.06 acres of land. The existing structure located on the parcel was originally constructed circa 1868.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential

The parcel located at 1004 S. 4th St. is currently owned by SAP Rentals LLC Series 1. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 4,676 square foot commercial building (calculated as two-stories) situated on approximately 0.05 acres of land. The existing structure located on the parcel was originally constructed circa 1900.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

The Property is located within the NE ¼ of the SW ¼ of Section 7, Township 81 North, Range 7 East in Clinton County, Iowa and is further located at approximately 41° 50' 6.30" North latitude and 90° 11' 36.66" West longitude. Refer to the Property Vicinity Map included in Figure 1, in Appendix A for Property location.

3.2 Current Description(s) of the Property

The Property consists of three commercial buildings (see Photograph 1 in Appendix B). Each building has its own interior character. The building at 1000 S. 4th St. is currently used for siding storage and has some debris and old equipment. The building at 1002 S. 4th St. could not be accessed during this investigation. The building at 1004 S. 4th St. is currently used as a construction company office, a storage area of construction supplies, and residential housing. The buildings have on-street parking to the east and north and a gravel alley to the west.

3.3 Current Description(s) of the Adjoining Properties

The adjacent properties consist of commercial buildings, roads, undeveloped grassland, an alley and residential development. The following table summarizes current uses of the parcels adjoining the Property.

Direction From Property	Description(s)
North	10th Ave. S. and commercial properties
East	S. 4th Street followed by undeveloped land
South	Vacant commercial property followed by an alley followed by commercial properties
West	Alley followed by commercial property followed by residential properties

According to Sanborn fire insurance maps and city directories, an auto body/auto dealership was located adjacent to the Property in a cross-gradient location at 413 10th Avenue South, approximately 70-feet west of the Property. This building currently houses Central Siding Supply. This auto body/auto dealership lasted from circa 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

4.0 USER PROVIDED AND REASONABLY ASCERTAINABLE INFORMATION

Information provided by City of Clinton (User) is reviewed as part of the Phase I ESA process to identify potential RECs associated with the Property. If such information is not provided by the User, Impact7G attempts to review all readily available and easily accessible information. The User Questionnaire is included in Appendix F.

4.1 Title Records

Copies of title documents for the Property were not provided by the User. An online search of the Iowa Land Record website produced a Warranty Deed, Quit Claim Deeds, and a Real Estate Transfer-Groundwater Hazard Statements for the Property which are included in Appendix H. Additional Property information was obtained from the Clinton County Assessor's Office website.

SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB

SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 0 BLK 19

4.2 Environmental Liens or Activity and Use Limitations

Environmental liens or activity and use limitations were not provided by the User. An online search of the Iowa Land Records website revealed no environmental liens or activity use limitations.

4.3 Specialized Knowledge

According to the User, no specialized knowledge of the Property or surrounding area was brought forward.

4.4 Valuation Reduction for Environmental Issues

The User is unaware of any valuation reductions for environmental issues, and none have been reported to Impact7G.

4.5 Owner, Property Manager, and Occupant Information

The Property is currently owned by Daniel and Margaret Keis, JP Rental Development LLC, and SAP Rentals LLC Series 1. The Property currently consists of three commercial buildings. These buildings have no managers. Two upstairs apartments at 1002 S. 4th St. are occupied by tenants.

4.6 Reason for Performing Phase I ESA

The User is currently involved in the U.S. EPA Brownfields Assessment Grant Program. This economic redevelopment initiative includes evaluation of abandoned, idle, or under-used commercial and industrial properties where real or perceived contamination is inhibiting the expansion of existing facilities or redevelopment of idle property. The User is evaluating the Property as part of the local need to address brownfields as well as the broader regional redevelopment initiative targeted by the City of Clinton.

4.7 Other

Impact7G reviewed correspondence and reports from the IDNR in regards to the Clinton Car Company LTANK site (also referred to as Time and Tricia Tague), Leak #9LTI80, located at 1100 S. 4th St. in Clinton, Iowa. According to a No Further Action letter dated June 20, 2003, the following was found and recommended:

- Contaminated soil was removed by soil over excavation.
- A “No Action Required” classification was recommended.

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to City of Clinton Property #2 LTANK site, Leak #9LTL91, located at 1101-1105 S 4th St., Clinton, Iowa. According to a No Further Action letter dated February 20, 1007, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports for the IDNR in regards to the Public Works Street Division LTANK site, Leak #8LTB45, located at 920 S. 3rd St. in Clinton, Iowa. According to a No Further Action letter dated December 12, 1990, the following was found and recommended:

- Concentrations of soil gas vapors were below action levels
- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to the Hari-Itage Designs & Raufsenerger Apartments LLC LTANK site, Leak #9LTL89, located at 412 12th Avenue S in Clinton, Iowa. According to a No Further Action letter dated April 25, 2016, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional Information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to the Hy-Vee Gas LTANK site, Leak #8LTA62, located at 901 S. 4th St. in Clinton, Iowa. According to a No Further Action letter dated September 19, 2014, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed a Phase I Environmental Site Assessment (ESA) for 1006 S. 4th St., Clinton, Iowa dated February 3, 2017 prepared by Impact7G on behalf of East Central Iowa Intergovernmental Association. According to this report, the following was found and recommended:

- There were four LUST sites located near the Property. These sites included the Clinton Car Company (Leak #9LTI80), Public Works Street Division (Leak #8LTB45), Hair-Itage Designs and Raufsenberger Apartments LLC (Leak #9LTL89), and Hy-Vee Gas (Leak #8LTA62). All four of these sites had recommendations of “No Further Action” and they were considered CRECs that represented no environmental risk to the Property.

- No additional investigations were recommended for the 1006 S. 4th St. property. It was noted, however, that there was potential for Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) given the age of the building.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

The purpose of the records search is to obtain and review data and information that would aid in identifying RECs, CRECs, HRECs, and/or De Minimis Conditions on or in the vicinity of the

Property. Federal, state, and tribal environmental record sources were obtained from Environmental Data Resources Inc (EDR) to at least the minimum search distances established in ASTM Standard Practice E1527-13. Impact7G has reviewed the information from the environmental record sources, and has summarized the information from the federal, state, and tribal environmental record sources search in the following sections. The complete environmental records report is included in Appendix D.

Environmental Records Report Summary						
DATABASE	**RADIUS** (Miles)	**PROPERTY LISTED**	**SITES**	**REC**	**VEC**	**FURTHER ACTION**
Federal Environmental Record Sources:

5.1.1 Federal NPL Sites

No National Priority List (NPL) sites were identified within the specified search radius.

5.1.2 Federal NPL Delisted Sites

No NPL Delisted sites were identified within the specified search radius.

5.1.3 Federal CERCLIS Sites

No Federal Comprehensive Environmental Response, Compensation, and Liability

Information System (CERCLIS) sites were identified within the specified search radius.

5.1.4 Federal NFRAP Sites

The Environmental Protection Agency (EPA) maintains the CERCLIS No Further Remedial Action Planned (NFRAP) archived sites. Sites identified as NFRAP indicate that, to the best of EPA's knowledge, assessment activities have been completed and no further steps will be taken to list these sites on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later date. This decision does not mean that there is no hazard associated with a given site, but based upon available information, the site is not judged to be a potential NPL site. EDR identified two (2) NFRAP sites within the specified search radius. However, due to insufficient address information, these sites were unable to be located. The NFRAP sites are discussed further in Section 5.1.22.

5.1.5 Federal RCRA COR ACT Sites

No Federal Resource Conservation and Recovery Act (RCRA) Corrective Action (COR ACT) sites were identified within the specified search radius.

5.1.6 Federal RCRA TSD Sites

No Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) sites were identified within the specified search radius.

5.1.7 Federal RCRA GEN Sites

The Environmental Protection Agency (EPA) maintains the Resource Conservation and Recovery Act (RCRA) Info systems, which provides access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HWSA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous wastes as defined by the RCRA. While sites listed within this database represent some form of hazardous waste activity, they have a higher associated risk if determined to be out of compliance or to have violations. Hazardous waste generating (GEN) facilities are categorized based on the quantity of waste they produce: Large Quantity Generator (LQG), Small Quantity Generator (SQG), and Conditionally Exempt Small Quantity Generator (CESQG). EDR identified one (1) GEN site within the specified search radius.

Automotive Finishes, identified by EPA ID IAR000007617, is located 0.08 miles south-southeast of the Property in a cross-gradient location. This site has a regulatory status of "no violations found". Based on the cross-gradient location and regulatory status, the listed GEN site is not considered an environmental concern to the Property at this time.

5.1.8 Federal IC/EC Sites

No Federal Institutional Control/Engineering Control (IC/EC) sites were identified within the specified search radius.

5.1.9 Federal ERNS Sites

No Emergency Response Notification System (ERNS) sites were identified within the specified search radius.

5.1.10 State/Tribal CERCLIS Sites

No State/Tribal CERCLIS sites were identified within the specified search radius.

5.1.11 State/Tribal SWL Sites

The Department of Natural Resources maintains an inventory of Solid Waste Landfill (SWL) sites within the State of Iowa. These sites may be active or inactive facilities, or open dumps that fail to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. Inventoried sites are categorized as: Permitted Solid Waste Disposal Facilities (SWF/LF), Closed Landfills Priority List (LCP), or Unpermitted Facilities (UNPERM LF). EDR identified two (2) SWL sites within the specified search radius.

City of Clinton HRLAP, identified by Facility ID: 23-SDP-06-90, is located 0.347 miles north-northeast of the Property in a cross-gradient location. Impact7G searched the Iowa Department of Natural Resources (IDNR) Contaminated Sites for additional information but no additional information was available. Based on cross-gradient location and distance from the Property, this SWL site is not considered an environmental concern to the Property at this time.

Hawkeye Disposal Services Transfer Station, identified by Facility ID: 23-SDP-09-93, is located 0.377 miles southwest of the Property in a cross-gradient location. The site has a regulatory status of “closed”. Impact7G searched the IDNR Contaminated Sites for additional information but no additional information was available. Based on cross-gradient location and distance from the Property, this SWL site is not considered an environmental concern to the Property at this time.

5.1.12 State/Tribal LTANKS Sites

The Department of Natural Resources maintains a database inventorying Leaking Tanks (LTANKS) sites. Review of this environmental record source includes Leaking Underground Storage Tank (LUST) records and any available records regarding Leaking Aboveground Storage Tanks (LAST). EDR identified fourteen (14) LUST and one (1) LAST sites within the specified search radius.

LTANKS Site Information						
Property Name	**Leak ID**	**Distance (Mi.)**	**Dir.**	**Elev. Diff.**	**Gradient**	**Status**
CLINTON CAR COMPANY	9LT180	0.041	SSE	-1	Cross	NAR

CASEY'S GENERAL STORE #2030	8LTG91	0.453	SW	9	Cross	NAR

NAR= No Action Required

Due to the proximity of sites to the Property, additional information was requested through the IDNR for Clinton Car Company, City of Clinton Property #2, Public Works Street Division, Hair-Itage Design & Raufsenberger Apartments LLC, and Hy-Vee Gas. Based on the additional records review, regulatory status, gradient location, and/or plume maps, these sites are considered to represent CRECs for the Property. These sites are discussed in Section 4.7.

Based on regulatory status, gradient location, and/or distance from the Property, the remaining LTANK sites are not considered an environmental concern to the Property at this time.

5.1.13 State/Tribal Tanks Sites

The Department of Natural Resources maintains a database of registered Underground Storage Tanks (Tanks). Tanks are regulated under RCRA Subtitle I and must be registered with the Department of Natural Resources. EDR identified eleven (11) Tanks sites within the specified search radius.

TANKS Site Information						
Property Name	**Registration ID**	**Distance (Mi.)**	**Dir.**	**Elev. Diff.**	**Gradient**	**Status**
DILLONS ONE STOP	198811393	0.015	NE	0	Cross	Removed (6)

GO-TANE SERVICE STATIONS INC	198608763	0.205	NNE	-3	Cross	Removed (4)

Clinton Car Company, Public Works Street Division, Hy-Vee Gas, ADM Corn Processing (Former Pillsbury Co Site), Former Clark and Former Wi North, Clinton Gas & Mart, and Go-Tane Service Stations Inc are all identified in Section 5.5.12 and are not considered to represent recognized environmental conditions for the property at this time.

Based on cross/down gradient location, regulatory status, no associated LUST listings, and/or distance from the Property, these Tanks sites are not considered an environmental concern to the Property at this time.

5.1.14 State/Tribal IC/EC Sites

No State/Tribal Institutional Control/Engineering Control (IC/EC) sites were identified within the specified search radius.

5.1.15 State/Tribal VCP Sites

The Iowa Department of Natural Resources (DNR) maintains a list of sites that are participating in a Voluntary Cleanup Program (VCP). EDR identified two (2) VCP sites within the specified search radius.

Benson Oil Company, Former, identified by Facility ID #1277, is located 0.346 miles southwest of the Property in a cross-gradient location. Based on the cross-gradient location and distance from the Property, this VCP site is not considered an environmental concern to the Property at this time.

Jetter Hauling Service/Hawkeye Disposal, identified by Facility ID #787, is located 0.428 miles southwest of the Property in a cross-gradient location. Based on cross-gradient location and distance, this VCP site is not considered an environmental concern to the Property at this time.

5.1.16 State/Tribal Brownfields Sites

The Iowa Department of Natural Resources (DNR) maintains a list of those sites considered to be State/Tribal Brownfields. These sites include properties believed to have contamination, which is hindering their purchase, expansion, or redevelopment. The status of these sites is tracked according to their involvement within the program through assessment, cleanup, or redevelopment. EDR identified one (1) State/Tribal Brownfields site within the specified search radius.

Leland Thompson Properties, identified by EPA ID #803, is located 0.127 miles south-southwest of the Property in a cross-gradient location. Based on the regulatory status of “closed” and cross-gradient location, this State/Tribal Brownfields site is not considered an environmental concern to the Property at this time.

5.1.17 US Brownfields Sites

The Environmental Protection Agency (EPA) maintains a database of EPA Brownfields grant recipients (US Brownfields). The Assessment, Cleanup and Redevelopment Exchange System (ACRES) database tracks information regarding US Brownfields sites and their assessment and cleanup. EDR identified twenty-nine (29) US Brownfields sites within the specified search radius.

Based on cross-gradient location, regulatory status of “assessment”, and/or distance

from the Property, these US Brownfields sites are not considered an environmental concern to the property at this time.

5.1.18 Other Haz Sites

No Other Hazardous sites were identified within the specified search radius.

5.1.19 Local Land Records

No Local land records sites were identified within the specified search radius.

5.1.20 Spills Sites

No Spills sites were identified within the specified search radius.

5.1.21 Other Sites

The Environmental Protection Agency (EPA) maintains 15 additional databases, which are consolidated within the Other sites environmental record. A comprehensive list of these databases is included within the EDR report in Appendix D. EDR identified two (2) Other sites within the specified search radius.

Clinton IA – Bridge Realignment – Johnson Warehouse, identified as EDR ID #IAR000519553, is a RCRA Non-GEN site located 0.105 miles west-southwest of the Property in a cross-gradient location. Based on the regulatory status and cross-gradient location, the listed site is not considered an environmental concern to the Property at this time.

National Petroleum Inc, identified at EDR #IAR000001388, is a RCRA Non-GEN site located 0.202 miles west-southwest of the Property in a cross-gradient location. Based on the regulatory status and cross-gradient location, the listed site is not considered an environmental concern to the Property at this time.

5.1.22 Unmapped Sites

EDR found two (2) sites within the designated radial distance recommended for investigation under ASTM Standard Practice E1527-13 that were non-geocoded (unmapped). The unmapped sites consists of two (2) SEMS/PRP sites. Further investigation by Impact7G indentified the approximate locations of the sties and respective distances from the Property.

SCHICK (EX) GENERAL HOSPITAL was identified in the SEMS-ARCHIVE database as ID 0703371. This site is positioned approximately 2.75 miles north of the Property in a cross-gradient locaiton. The status of this property is unknown.

AGRICO CHEMICAL COMPANY was identified in the SEMS-ARCHIVE database as ID 0500378. This site is positioned approximately 2.25 miles northeast of the Property in a cross-gradient location. The status of this property is unknown.

Both of the unmmaped sites are located outside the radial distance recommended for investigation under ASTM Standard Practice E1527-13; therefore, given the distance and cross-gradient location, the unmapped sites are not considered an environmental concern to the Property at this time.

5.2 Additional Environmental Record Sources

Additional environmental record sources are potentially used to enhance and supplement the

standard environmental record sources. The following summarizes information obtained from additional sources.

5.2.1 Other Information Reviewed

- Iowa Department of Natural Resources records department
- NRCS Web Soil Survey
- Iowa Department of Natural Resources County Well Index
- Clinton County Assessor's website
- Clinton County Emergency Management records

5.2.2 Public Well Information

The Iowa Department of Natural Resources database was searched by Impact7G. Seven (7) private wells were identified within the 1,000-foot radius of the Property in the Private Well Tracking System. Location accuracy is unknown, but locations are assumed to be ± 55.77 feet. Additional information on the well search is included in Appendix H.

Private Well Site Information					
Well Number	**Distance (Mi.)**	**Dir.**	**Well Depth (ft)**	**Gradient**	**Status**
266339	0.160	SW	19	Cross	Plugged
266340	0.151	SW	16	Cross	Plugged
266342	0.176	SW	16	Cross	Plugged
359720	0.178	WNW	90	Cross	Active
266336	0.165	SW	16	Cross	Plugged
266337	0.162	SW	16	Cross	Plugged
266338	0.138	SW	12	Cross	Plugged

No previously documented wells are present on the Property. Based on the cross-gradient locations and/or distances from the Property, these wells are not considered an environmental concern to the Property at this time.

5.3 Historical Use of Property and Surrounding Area

Historical information for the Property and surrounding area was based on review of reasonably ascertainable historic records. Available historic documentation is included in Appendix C. This information is summarized in the following table:

Approximate Date(s)	Property Description(s)	Surrounding Area Description(s)
1885-1897	Fire insurance maps, USGS topographic maps	**Property:** Commercial **North:** 10th Ave. S. followed by commercial development **East:** S. 4th St. followed by residential development **South:** Commercial development **West:** Residential development
1902-1925	Fire insurance maps, USGS topographic maps	**Property:** Same as above **North:** Same as above **East:** Same as above **South:** Same as above **West:** Mixed commercial and residential development

Approximate Date(s)	Property Description(s)	Surrounding Area Description(s)
1950 -1972	Historic aerial photographs, fire insurance maps, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Same as above **North:** Same as above **East:** S. 4th St. followed by commercial/residential development **South:** Same as above **West:** Residential development
1977-1987	Historic aerial photographs, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Commercial property **North:** Same as above **East:** Same as above **South:** Same as above **West:** Mixed commercial and residential development
1992-2014	Historic aerial photographs, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Unknown **North:** Same as above **East:** S. 4th St. followed by mixed commercial and residential development **South:** Same as above **West:** Same as above

Based on the review of the above historical records and assessor data, it appears the existing structure located on the Property was constructed circa 1868. According to Sanborn fire insurance maps and city directories, an auto body/auto dealership was located adjacent to the Property in a cross-gradient location at 413 10th Avenue South, approximately 70-feet west of the Property. This auto body/auto dealership lasted from circa 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

5.3.1 Aerial Photographs Information

Impact7G reviewed the following available aerial photographs of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1937 1939 1956 1966 1976 1983	Commercial development	**North:** 10th Ave. S. followed by mixed residential/commercial development **East:** S. 4th St. followed by residential development **South:** Commercial development followed by alley followed by commercial development **West:** Residential development
1994 2005 2008 2011 2015	Same as above	**North:** Same as above **East:** S. 4th St. followed by vacant grass-covered land **South:** Same as above **West:** Commercial development followed by residential development

5.3.2 Fire Insurance Maps Information

A search for fire insurance maps was completed of The Sanborn Library's collection, which includes records from the Library of Congress, University Publications of America, and EDR's Private Collection. Impact7G reviewed the following available fire insurance maps of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1885	Grocer, hardware store, dry goods store	**North:** 10th Ave. S. followed by commercial **East:** S. 4th St. followed by residential **South:** Vacant commercial followed by alley followed by commercial **West:** Alley followed by residential
1890	Grover, warehouse, dry goods store	**North:** Same as above **East:** Same as above **South:** Hardware store/Stauber Mfg. Co. Clothing Factory followed by alley followed by commercial **West:** Same as above
1897	Grocer, hardware store and tin shop, grocery storage	**North:** Same as above **East:** Same as above **South:** Vacant, followed by hardware store and tin shop followed by alley followed by commercial property **West:** Alley followed by vacant parcel followed by residential property
1902	Grocer, hardware store and tin shop, meat market	**North:** Same as above **East:** Same as above **South:** Harness/leather works, followed by hardware store, followed by alley and commercial property **West:** Alley followed by grocer followed by residential property
1909	Saloon, hardware store and tin shop, barber	**North:** Same as above **East:** Same as above **South**: Restaurant followed by hardware store followed by alley and commercial property **West:** Alley followed by hardware store followed by residential property
1917	Grocer/warehouse, hardware store and tin shop, vacant	**North:** Same as above **East:** Same as above **South:** Restaurant and button sorting company followed by alley followed by commercial property **West:** Same as above
1925	Warehouse, commercial and tin shop, commercial	**North:** Same as above **East:** Same as above **South:** Commercial property followed by alley and commercial property **West:** Same as above
1950	Same as above	**North:** Same as above **East:** S. 4th St. followed by filling station **South:** Commercial property followed by alley followed by commercial with

Date(s)	Property Description(s)	Surrounding Area Description(s)
		filling station **West:** Vacant property followed by residential property
1967	Same as above	**North:** Same as above **East:** Same as above **South:** Furniture store/storage followed by commercial property followed by alley followed by commercial with car repair **West:** Same as above

5.3.3 USGS Topographic Maps Information

Impact7G reviewed the following available topographic maps of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1891 1894	Developed land	**North:** Developed land followed by railroad tracks (potential mapping error) **East:** Developed land **South:** Developed land **West:** Developed land followed by railroad tracks (potential mapping error)
1899 1976 1991 2013	Same as above	**North:** Developed land **East:** Developed land followed by railroad tracks **South:** Developed land followed by railroad tracks **West:** Developed land

5.3.4 City Directories Information

Impact7G reviewed the following available city directories of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1957	Vacant, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Commercial and residential **East:** Phil's Conoco Service Station, insufficient data **South:** Commercial and residential property **West:** Residential property
1961	Easy Wash Laundromat, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Phil's Sinclair Service Station, commercial and residential property **East:** Vacant, insufficient data **South:** Arlo's Friendly Service Gas Station, commercial **West:** Same as above
1967	Easy Wash Laundromat, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Sinclair gas station, commercial and residential **East:** Western Oil and Fuel Gas Station, followed by residential property **South:** Commercial property **West:** Same as above
1972	Easy Wash Laundromat,	**North:** Randy's Body Shop, commercial and

Date(s)	Property Description(s)	Surrounding Area Description(s)
	vacant, Unknown	residential property **East:** Western Oil and Fuel Gas Station **South:** Commercial and residential property **West:** Same as above
1977	Easy Wash Laundromat, Calnan and Son Hardware, vacant	**North:** Same as above **East:** Western Division of Continental Oil Gas Station **South:** Same as above **West:** Commercial and residential property
1982	Easy Wash Laundromat, Insufficient data, Turner's Barber Shop	**North:** Same as above **East:** Restaurant **South:** Same as above **West:** Same as above
1987	Insufficient data, apartment above, vacant with apartments above	**North:** Marty's Auto Clinic Auto Repair, commercial and residential **East:** Same as above **South:** Same as above **West:** R & R Limited Auto Sales followed by commercial and residential property
1992	Insufficient data, 123 FixIt Shop and Gary's Barber Shop	**North:** 4th Street Auto Sales, commercial and residential **East:** Restaurant and residential property **South:** Same as above **West:** Quality Auto Body and Sales and residential property
1995	Insufficient data	**North:** Classic Auto Sales and commercial/ residential property **East:** Insufficient data **South:** Commercial property **West:** Commercial and residential property
2000	Insufficient data	**North:** Residential property **East:** Insufficient data **South:** Same as above **West:** Residential property
2005	Insufficient data, Clinton Fellowship Club and Open Door Mission	**North:** Commercial and residential property **East:** Same as above **South:** Same as above **West:** Commercial and residential property
2010	Insufficient data, Tony's Pawn Shop	**North:** Same as above **East:** Same as above **South:** Same as above **West:** Same as above
2014	Insufficient data, apartments above	**North:** Residential property **East:** Same as above **South:** Commercial and residential property **West:** Same as above

According to historical documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. This property was known as R & R Limited Auto Sales and Quality Auto Body and Sales. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and

solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

According to historical documents including Sanborn fire insurance maps and City Directories, an auto repair/gas station/auto sales shop was located approximately 500-feet north of the Property in a cross-gradient location at 927 S. 4th Street from 1961-1995. This property was known as Phil's Sinclair Service, Sinclair Gas Station, Randy's Body Shop, Marty's Auto Clinic Auto Repair, 4th Street Auto Sales, and Classic Auto Sales. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. The site is reported in the LUST database as Hy-Vee Gas, identified by Leak #8LTA62 and is further discussed in Section 1.2.

According to historical documents including Sanborn fire insurance maps and City Directories, an auto service station shop was located approximately 150-feet northeast of the Property in a down-gradient location at 1001 S. 4th Street from 1950-1977. This property was known as Phil's Conoco Service Station, Western Oil Fuel Gas Station, and Western Division of Continental Oil Gas Station. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. The site is also reported in the LUST database as Hy-Vee Gas, identified by Leak #8LTA62 and is further discussed in Section 1.2.

5.3.5 Assessors' Information

The Property is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' to POB	Commercial
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

6.0 PROPERTY RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The Property reconnaissance was performed on February 14, 2018 by Impact7G. Based on the developed nature of the Property with three commercial buildings on the parcels, the reconnaissance consisted of a room-by-room inspection. Permission to enter 1002 South 4th Street was not granted, and the interior of the building was not inspected. Buildings and an alley covered the property. These factors, and the presence of snow cover, limited observations of the ground. Investigators also had no access to the roof. There were no additional limiting conditions for the Property or surrounding area during the visit.

6.2 General and Physical Source(s) Setting

Physical setting sources provide information about the geologic, hydrogeologic, hydrologic, and topographic characteristics of the Property. Impact7G reviewed a current *USGS 7.5 Minute Topographic Map* of the Property to assess the approximate migration of any potential RECs, CRECs, or HRECs. Based on observations made during reconnaissance, the Property is generally flat (1-2% slope) with the Property gently sloping to the east-southeast. The Property is located at an approximate elevation of 598 feet above msl. Information on the topographic gradient is also included in Figure 1 of Appendix A.

The Mississippi River is located 0.42 miles east of the Property and flows to the south. Therefore, groundwater at the Property and adjacent properties is assumed to flow east-southeast in the general direction of the Mississippi River and topographically lower elevations.

Impact7G also reviewed web soil survey information through the Natural Resources Conservation Service to obtain a depiction of soil at the Property. The survey indicated the majority of the Property is underlain by Downs silt loam, 5 to 9 percent slopes. The Property consists of three existing commercial buildings on approximately 0.23 acres of land.

The current use of the surrounding area was also observed.

Direction From Property	Description(s)
North	10th Avenue South followed by commercial development
East	South 4th Street followed by undeveloped land
South	Vacant commercial building followed by an alley followed by commercial development
West	Alley followed by a commercial building followed by residential development

Impact7G did not identify any evidence of the Property's or surrounding areas past use(s) during the reconnaissance. Historic city directories indicate that the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. This property was known as R & R Limited Auto Sales and Quality Auto Body and Sales. Currently, it is Central Siding Supply.

6.3 Descriptions of Structures, Roads, Other Improvements on the Property

6.3.1 Descriptions of Structures

The Property is improved with a two-story commercial building that totals approximately 4,140 square feet at 1000 South 4th Street, a two-story commercial building that totals approximately 5,130 square feet at 1002 South 4th Street, and a three-story commercial building that totals 4,676 square feet at 1004 South 4th Street. Both 1000 and 1004 South 4th Street have basements. County Assessor data indicate that 1002 South 4th Street has a basement. Assessor records indicate the buildings were constructed circa 1864, 1868, and 1900 (from north to south). Historic Sanborn maps indicate buildings at this location as early as 1885.

6.3.2 Descriptions of Roads

South 4th Street is located east of the Property. 10th Avenue South is positioned north of the Property. A gravel alley is present west of the Property.

6.3.3 Heating/Cooling System

The building located at 1000 South 4th Street appears to have been heated with a gas heating system, and because of exposed piping, a fuel oil system in the past. The building was not heated at the time of investigation.

The building located at 1002 South 4th Street was not entered due to an inability to get permission to access the building. Therefore, the heating/cooling system is unknown at this building.

The building located at 1004 South 4th Street is heated primarily with a forced air heating system fed by natural gas. Some apartments have electric baseboard heat as well. No cooling systems were identified.

6.3.4 Sewage Disposal

Based on its urban location, the Property is/was assumed to be connected to the city sanitation system. Sewer is connected at 1004 South 4th Street. Sewer is disconnected at 1000 South 4th Street. The status of 1002 South 4th Street is unknown.

6.3.5 Source of Potable Water

Based on its urban location, the Property is/was assumed to be connected to the city potable water system. Water is connected at 1004 South 4th Street. Water is disconnected at 1000 South 4th Street. The status at 1002 South 4th Street is unknown.

6.3.6 Additional Utilities

Based on its urban location, the Property is assumed to be connected to utility systems including electric, city water, city sewer, and natural gas. Gas and water utility access points are located on the west side of the buildings. Electricity is delivered overhead on the west side of the building. Utility connections are adjacent to the buildings.

6.4 Interior and/or Exterior Observations at Property

6.4.1 Hazardous Substances or Petroleum Products In Connection With Identified Uses

No hazardous substances or petroleum products were identified at 1000 South 4th Street during reconnaissance, and no additional information was provided by the User or current owner.

One (1) 5-gallon metal container of mineral spirits was identified in the basement of 1004 South 4th Street. The container is rusting, but no evidence of spills or releases was observed. Based on the nature of the product and the small quality observed, the presence of this chemical is not expected to represent an environmental concern to the Property.

Two (2) 5-gallon plastic containers of floor adhesive was observed in the basement of 1004 South 4th Street. No evidence of spills or releases was observed. Based on the nature of the product and the small quantity observed, the presence of this chemical is not expected to represent an environmental concern to the Property.

Various 1-gallon or less metal and plastic containers of adhesive, paint thinner, lacquer, and epoxy floor coating was observed on the first floor at 1004 South 4th Street. No evidence of spills or releases was observed. Based on the nature of the product and the

small quantity observed, the presences of these chemicals is not expected to represent an environmental concern to the Property.

No other hazardous substances or petroleum products were observed on the Property.

6.4.2 Storage Tanks

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property use, the UST was presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a recognized environmental condition (REC).

6.4.3 Odors

No unusual odors were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.4 Pools of Liquid

No pools of liquid, not attributed to a recent rain event, were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.5 Drums

One (1) 55-gallon metal drum was identified in the basement at 1004 South 4th Street. The drum was empty and in good condition. Because it was empty and in good condition, the drum poses no environmental concerns to the property at this time. No additional information was provided by the User or current owners.

6.4.6 Hazardous Substances or Petroleum Products Containers (Not Necessarily in Connection With Identified Uses)

No hazardous substances or petroleum product containers were observed on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.7 Unidentified Substance Containers

No unidentified substance containers were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.8 Polychlorinated Biphenyls (PCBs)

Impact7G identified numerous fluorescent light ballasts throughout 1004 South 4th Street. Observed ballasts show no evidence of corrosion, damage, or leaks. Therefore, the fluorescent light ballasts are not considered an environmental concern to the Property at this time. No other evidence of equipment likely to contain PCBs, including pole or pad-mounted transformers were observed on the Property or adjacent properties during reconnaissance and no additional information was provided by the User or current owners.

6.4.9 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.10 Stained Soil or Pavement

No stained soil or pavement was observed on the Property during reconnaissance, and no additional information was provided by the User or current owners. Snow cover limited surface examinations of areas around the buildings at the Property.

6.4.11 Stressed Vegetation

No stressed vegetation was found on the Property during reconnaissance, and no additional information was provided by the User or current owners. Snow cover limited surface examinations of areas around the buildings at the Property.

6.4.12 Solid Waste

Dumpsters and trash receptacles for solid waste management were observed on the Property. Dumpsters were located on the west side of the property and consisted of one (1) 4-cubic yard dumpster. Solid waste consisting of metal and general trash was identified at the west side of 1002 South 4th Street during reconnaissance. The specific types of refuse were indeterminate because of snow cover. The observed materials are not considered to represent evidence of a recognized environmental condition. However, the materials outside of dumpsters represent a housekeeping concern and should be removed from the property. No other solid waste was identified on the Property during reconnaissance and no additional information was provided by the User or current owners.

6.4.13 Waste Water

No evidence of waste water was identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.14 Wells

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a recognized environmental concern (REC) to the Property.

Impact7G recommends that any on-site wells be properly decommissioned. No other wells were observed on the Property.

6.4.15 Septic Systems

No evidence of septic systems was identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.16 Stains and Corrosion

No areas of stains or corrosion were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.17 Drains and Sumps

A sump pump was observed along the north wall in the basement of 1004 South 4th Street. It is unclear when the sump pump was installed. According to Mr. Steines, the property owner, this sump pump discharges into the city sewer system. No hazardous substances or petroleum products were noted in the vicinity of the sump pump. Based on the use of the sump pump for storm water runoff, the presence of this sump is not expected to represent a significant environmental concern to the property at this time.

No other drains or sumps were observed at the Property during reconnaissance and no additional information was provided by the User or current owners.

7.0 VAPOR ENCROACHMENT SCREEN

The goal of conducting a Vapor Encroachment Screen (VES) is to determine if a Vapor Encroachment Condition (VEC) on the Property caused by a release of vapors from contaminated soil or groundwater either on or near the Property. A VES is conducted in general conformance with the scope and limitations of ASTM Standard Practice E2600-10. A VES is not a Vapor Intrusion Assessment, which evaluates whether vapors are intruding into and accumulating in buildings and structures, posing a potential risk to human health. A VES evaluates the potential for vapors to encroach upon the Property. A VES is used to determine whether a vapor intrusion assessment is warranted.

7.1 Vapor Encroachment Screen Process

A VES is conducted in two Tiers. A Tier 1 Screening is used to determine if a VEC exists on the Property using information gathered during this Phase I ESA. If the Tier 1 Screen cannot rule out the possibility of a VEC on the Property, then a Tier 2 Screen can be conducted. A Tier 2 Screen reviews reasonably ascertainable soil, soil gas, and/or groundwater data from previously conducted Phase I, Phase II, and other reports to determine whether a VEC on the Property can be ruled out.

7.2 Vapor Encroachment Screening Decision Models

The VES Decision Model (Appendix E) is a tool used by Impact7G to assist in investigating the likelihood a VEC exists on the Property. In addition to the step-by-step process for both a Tier 1 and a Tier 2 Screen, definitions and typical chemicals of concern are listed. The VES Decision Models are provided in Appendix E.

7.3 Vapor Encroachment Screen Conclusions

In conjunction with Practice E1527-13, Impact7G conducted the Vapor Encroachment Screen in accordance with ASTM Standard Practice E2600-10 for the Property located at 1000-1004 South 4th Street, Clinton, Clinton County, Iowa 52732.

This VES has revealed that a Vapor Encroachment Condition (VEC) can be ruled out because a VEC does not or is not likely to exist on the Property.

8.0 INTERVIEWS

8.1 Interviews with Owner

Impact7G spoke with Mr. Dan Keis and Mrs. Margaret (Peg) Keis, owners of 1000 South 4th Street, for additional information regarding the Property. Mr. and Mrs. Keis were unaware of any

environmental concerns with the Property at this time. Contact information for Mr. and Mrs. Keis is available in Appendix F.

The building at 1002 South 4th Street is owned by JP Rental Development LLC. Impact7G was unable to make contact with the property owner. According to the City Engineer, Jason Craft, access to the building was not granted.

Impact7G spoke with Mr. Paul Steines, owner of 1004 South 4th Street, for additional information regarding the Property. Mr. Steines indicated that the sump pump in the basement is connected to the City sewer. Additionally, Mr. Steines indicated that he is unaware of fuel oil tanks existing on the property and found only one potential pipe associated with fuel oil heating during renovations. Mr. Steines is unaware of any environmental concerns with the Property at this time. Contact information for Mr. Steines is available in Appendix F.

8.2 Interviews with Previous Owners
Contact information for previous owners was not reasonably ascertainable by Impact7G.

8.3 Interviews with Managers
There were no managers associated with the Property.

8.4 Interviews with Occupants
No occupants were interviewed at this Property.

8.5 Interviews with State and Local Government Officials
Impact7G contacted Mr. Chance Kness with Clinton County Emergency Management for additional information regarding the Property. Mr. Kness stated that Clinton County Emergency Management is unaware of any pollution, hazardous waste generating activities, violations, remediation efforts, soil/water sampling efforts, well permits, septic tank permits, or septic system and leach field discharges on the Property. Additionally, Mr. Kness found no records of emergency responses within the Clinton County Emergency Management Office. Contact information for Mr. Kness is included in Appendix F.

Impact7G attempted to contact Battalion Chief Jeff Chapman of the Clinton Fire Department to obtain additional information regarding the Property. At the time of this report's completion, a response from the city fire department has not been received. Upon receipt of information that might weigh on this report's findings, Impact7G will issue an addendum. Contact information for Mr. Chapman is included in Appendix F.

8.6 Interviews with Others
There were no other interviews associated with the Property.

9.0 FINDINGS
Based on the available information obtained and reviewed, the findings of this report are as follows:

The following RECs were identified as part of this Phase I ESA:

- One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property uses, the UST was

presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

- A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a REC to the Property.

- According to historic documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

The following CRECs were identified as part of this Phase I ESA:

- Clinton Car Company, identified by Leak #9LTI80, is located 0.041 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2003. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- City of Clinton Property #2, identified by Leak #9LTL91, is located 0.076 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2007. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Public Works Street Division, identified by Leak #8LTB45, is located 0.096 miles east off the Property in a down-gradient location. The site has a regulatory status of “No Further Action” in 1990. Based on the regulatory status and down-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hy-Vee Gas, identified by Leak #8LTA62, is located 0.112 miles east-northeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2014. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hair-Itage Designs & Raufsenberger Apartments LLC, identified by Leak #9LTL89, is located 0.118 miles south-southwest of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2016. According to the NFA Certificate, residual free product remains onsite. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- No HRECs were identified as part of this Phase I ESA.

- No De Minimis Conditions were identified as part of this Phase I ESA.

The following Non-Scope ASTM Considerations were included as part of this Phase I ESA:

- Two Non-Scope ASTM Considerations were included as part of this Phase I ESA. Impact7G believes, based on the circa 1884-1900 construction dates of the structures located on the Property, the risk of Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) exposure is possible. Therefore, further ACM and LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

10.0 OPINION

It is the opinion of the environmental professionals that information obtained from the historic research of the Property and surrounding Property uses, government databases, the Property reconnaissance, and interviews indicates that presently there are three (3) RECs associated with the property. RECs include the presence of a well/cistern and potential underground storage tank in the basement of 1000 South 4th Street and the use of an adjacent property for an auto body/repair shop and auto sales location. There are two (2) Non-Scope ASTM Considerations associated with the property, including potential for asbestos containing materials (ACMs) and Lead-Based Paint (LBP). The scope, type, and/or extent of these RECs represent an environmental impact and/or potential risk to the Property, which warrants additional investigation to detect the potential presence of hazardous substances or petroleum products.

11.0 CONCLUSIONS

Impact7G has performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 of 1000-1004 South 4th Street, Clinton, Clinton County, Iowa 52732, also identified as Local Parcel Numbers 80-59700000, 80-59730000, and 80-59740000, the Property. Any exceptions to, or deletions from, this practice are described in Sections 2.4, 6.1 and 12.0 of this report. This assessment has revealed evidence of the following RECs in connection with the Property:

- Three (3) RECs at the Property
- Five (5) CREC's near the Property
- Two (2) Non-Scope Considerations were identified on the Property

Based on data gathered during this Phase I ESA, Impact7G believes that further investigation is warranted for the Property at this time. Soil and/or groundwater sampling should be conducted to determine the presence of chemicals of concern, including but not limited to, volatile organic compounds (VOCs), Resource Conservation and Recovery Act (RCRA) Metals, semi-volatile

organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), and petroleum contaminants. Additionally, ACM and LBP testing should be conducted for the buildings on the Property if renovation (ACM and LBP) or demolition (ACM) are expected.

12.0 DEVIATIONS

12.1 Data Failure

As defined by the ASTM Standard Practice E1527-13, a data failure is "*a failure to achieve the historical research objectives…even after reviewing the standard historical sources…that are reasonably ascertainable and likely to be useful."* Impact7G encountered the following data failures while completing this Phase I ESA:

- Not able to acquire historical records prior to 1885 or first developed use.
- Greater than 5-year interval between historical records between years 1925-1950.

12.2 Data Gap

As defined by the ASTM Standard Practice E1527-13, a data gap is "*a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information."* Impact7G encountered the following data gaps while completing this Phase I ESA:

- Access was not granted to the interior of the building located at 1002 South 4th Street at the time this report was completed.
- Roof was inaccessible during site reconnaissance.
- Snow cover inhibited surface visibility surrounding the Property.
- Impact7G was unable to obtain contact information for JP Rental Development LLC regarding the 1002 South 4th Street property. Upon receipt of any pertinent information, Impact7G will issue an addendum.

Overall, the above data failure, data gaps, and deviations are not expected to alter the opinion of this report.

13.0 NON-SCOPE CONSIDERATIONS

As part of the agreed upon Scope of Work with the User, Impact7G completed the following Non-Scope ASTM Considerations:

Consideration:	Y	N	Consideration:	Y	N
Asbestos Containing Materials	X		Lead-Based Paint	X	

13.1 Lead Based Paint

This information is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to lead-containing paints. Structures constructed after 1979 are unlikely to have LBP present. Structures built after 1979, while not expected to, may still contain LBP.

As part of a non-scope ASTM service, Impact7G believes, based on the circa 1864-1900 construction date of the buildings located on the Property, the risk of LBP exposure is

possible. Therefore, further LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

13.2 Asbestos

The information below is for general purposes and does not constitute an asbestos containing materials (ACM) survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM. Although the cutoff date of 1981 is generally accepted for estimating the likelihood that a building contains ACMs, building materials manufactured after 1981, while not expected to, may still contain asbestos.

As part of a non-scope ASTM service, Impact7G believes, based on the circa 1864-1900 construction date of the buildings located on the Property, the presence of ACM is likely. Therefore, further ACM investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

Property Description: The property contained both industrial and residential development from approximately 1897 to 1909. The industrial use included a coal shed and a wood storage yard. A railroad constructed a passanger rail depot in 1915. Use of the structure as a depot continuted until approximately 1970. Subsequent owners have used the building for commercial-retail purposes since 1970. Melvin L. Liphardt currently owns the property.

Property Description: The site is generally located on the southeast side of the intersection of Liberty Avenue and South 5th Street. The site historically contained various industrial developments including a lumberyard from approximately 1897 to 1902, an engineering company from 1925-1967, an automotive parts company from 1970 to 1980, a metal crafter business from 1985 to 1995 and a metal fabrication shop in 1999. Historical Sanborn maps and an interview with the property owner

indicated the site had a foundry associated with the engine block manufacturers from approximately 1925 until 1980. Additionally, historical Sanborn maps indentify a railroad siding located on the property from 1897 to 1950. The site reconnaissance located the railroad siding but the property owner indicated it had not been used since he purchased the site around 1980. The site reconnaissance identified a large pit associated with the former foundry and numerous unlabeled 55-gallon drums throughout the facility, some of which were bulging.

Property Description: The parcel totals approximately 0.42 acres with one commercial structure and a parking lot. The structure is used as office space for New Age Builders, Inc., a general contractor, and Mel Foster Company, a realty agency. The structure was previously a Kentucky Fried Chicken (KFC) restaurant. The property was first identified as a residence from circa 1909 through circa 1956. Circa 1960 a restaurant identified as the Golden Point Drive-In occupied the site. The KFC restaurant

Property Description: Property operated as a Petroleum Bulk Storage and distribution facility from 1890s ~ 2003. The property was purchased by Troy Pucket at a tax sale and used as a pallet recycling facility and for automotive repairs. A July 2005 fire distroyed the building and contents. The fire department pushed in the building to prevent collapse. The property has remained unoccupied since that time and became an area dumping ground for tires, chemical containers and

Property Description: Property operated as a Petroleum Bulk Storage and distribution facility from 1890s ~ 2003. The property was purchased by Troy Pucket at a tax sale and used as a pallet recycling facility and for automotive repairs. A July 2005 fire distroyed the building and contents. The fire department pushed in the building to prevent collapse. The property has remained unoccupied since that time and became an area dumping ground for tires, chemical containers and unwanted furniture.

Property Description: The property was used for pallet manufacturing for ten years prior to its purchase by Mr. Puckett and prior to that it was a Skelly Oil Company bulk oil station with aboveground storage tanks for oil and diesel and oil storage inside the building in 55-gallon drums. The property has been vacant since July 29, 2005 due to a fire in the site building that resulted in an emergency demolition of the site building immediately thereafter.

building, with ground-floor commercial space. As pre-purchase environmental due diligence costs were a large undertaking to begin reviewing the feasibility of renovation investment, 128(a) funds were used to assist the non-profit applicant with this early stage of project review. The non-profit anticipates acquiring the site in late 2014, and upon investment of their own funds, and state and federal tax credit program awards, they will begin renovation in mid-2015.

Property Description: Residentially developed (c. 1897) with dwelling and automobile garage.
Circa 1917, a coal storage structure was constructed along the south side of the property where the garage was previously occupied. An office for an adjacent coal company was located on the property in 1950. In 1967, an office, storage warehouse and metal contractor storage area was located on the property.

Unknown media cleaned up: Not reported
Past Use: Multistory Not reported
Property Description: Residentially developed (c. 1897) with dwelling and automobile garage. Circa 1917, a coal storage structure was constructed along the south side of the property where the garage was previously occupied. An office for an adjacent coal company was located on the property in 1950. In 1967, an office, storage warehouse and metal contractor storage area was located on the property.

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

CERCLIS: SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

NFRAP: SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-CESQG - RCRA - Conditionally Exempt Small Quantity Generators.

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROL - Sites with Institutional Controls.

Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal CERCLIS: SHWS State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state. SHWS - Registry of Hazardous Waste or Hazardous Substance Disposal Sites

State/Tribal SWL: SWF/LF Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF - Permitted Solid Waste Management Facilities

State/Tribal LTANKS: LUST LAST - Leaking Aboveground Storage Tank Sites. A listing of leaking aboveground storage tank sites. LAST - Leaking Aboveground Storage Tank Sites INDIAN LUST R8 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R10 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R6 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R9 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R4 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R7 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R5 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R1 - Leaking Underground Storage Tanks on Indian Land.

State/Tribal Tanks: UST Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. UST - Underground Storage Tank Data AST - Aboveground Storage Tank Sites. INDIAN UST R5 - Underground Storage Tanks on Indian Land. INDIAN UST R9 - Underground Storage Tanks on Indian Land. INDIAN UST R10 - Underground Storage Tanks on Indian Land. INDIAN UST R4 - Underground Storage Tanks on Indian Land. INDIAN UST R8 - Underground Storage Tanks on Indian Land. INDIAN UST R6 - Underground Storage Tanks on Indian Land. INDIAN UST R1 - Underground Storage Tanks on Indian Land. INDIAN UST R7 - Underground Storage Tanks on Indian Land.

State/Tribal IC / EC: INST CONTROL Sites currently enrolled in the Land Recycling Program that have Institutional Controls. INST CONTROL - Sites with Institutional Controls

State/Tribal VCP: VCP Sites currently enrolled in the Land Recycling Program. VCP - Land Recycling Program Sites

ST/Tribal Brownfields: BROWNFIELDS Brownfields are abandoned, idled, or under-used industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. BROWNFIELDS - Brownfields Site Listing

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Other Haz Sites: US CDL A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. US CDL - Clandestine Drug Labs

Database Descriptions

Local Land Records: LIENS A listing of liens filed with the Iowa Comprehensive Petroleum Underground Storage Tank Fund. LIENS - Liens Filed Listing

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System SPILLS - Spills Database. SPILLS 90 - SPILLS90 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. TRIS - Toxic Chemical Release Inventory System. SSTS - Section 7 Tracking Systems. RAATS - RCRA Administrative Action Tracking System. PRP - Potentially Responsible Parties. PADS - PCB Activity Database System. ICIS - Integrated Compliance Information System. FTTS - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). FTTS INSP - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). MLTS - Material Licensing Tracking System. RADINFO - Radiation Information Database. BRS - Biennial Reporting System. INDIAN RESERV - Indian Reservations. US AIRS (AFS) - Aerometric Information Retrieval System Facility Subsystem (AFS). US AIRS MINOR - Air Facility System Data. FINDS - Facility Index System/Facility Registry System.

APPENDIX E

VAPOR ENCROACHMENT SCREEN MODEL WORKSHEETS

Vapor Encroachment Decision Model

Tier 1

Examples of Mitigating Factors

Soil Characteristics = Silty-Clay low permeability soil

Hydraulic barrier = River, wetlands, lake, clean water lens

Physical barriers = Perched water table, impermeable soil layer

Building design = Utility corridor, fractured bedrock, fractured clay

Definitions

TP – Target Property

VEC – Vapor Encroachment Condition – the presence or likely presence of vapors from chemicals of concern (COC) in the surface of the Target Property caused by the release of vapors on or near the Target Property.

AOC – Area of Concern - Petroleum Hydrocarbons = 0.10 or 1/10 of a mile or All other COCs = 0.33 or 1/3 of a mile

COC - Chemical of Concern – chemical that is present in the subsurface environment that can potentially migrate as a vapor into the subsurface of the Target Property.

Vapor Encroachment Decision Model

Tier 2

START

A VEC can be ruled out because a VEC does not or is not likely to exist on the TP.

The release was down-gradient of the Target Property. | The release was cross-gradient of the Target Property. | The release was up-gradient of the Target Property.

YES → A VEC can NOT be ruled out on the TP. **Additional Investigation Warranted**

NO

YES YES

Are any sites within the Critical Distance of the TP?

YES

Conduct an Invasive screening with data collection.

The potential for contamination exists on the Target Property and is considered a REC.

Phase II is Warranted.

NO ← Is there evidence (**previous reports and/or regulatory records**) to indicate the status, size and movement of the contaminant plume and amount of COC concentrations present?

YES

Conduct Non-Invasive data collection
Perform Plume Test

Is the number equal to or greater than the critical distance?

YES → A VEC can be ruled out because a VEC does not or is not likely to exist on the TP.

NO → A VEC can **NOT** be ruled out on the TP. **Additional Investigation Warranted**

Plume Test

Calculate the **lineal distance** from the nearest edge of the plume to the Target Property line.

Lineal distance $= X^2 + Y^2$

X = depth to groundwater
Y = distance from sampling location to the Target Property line.

Critical Distance Calculations

Petroleum Hydrocarbons

Gasoline, Diesel, Oil, or Jet Fuel

30 feet – for dissolved petroleum hydrocarbons.

100 feet – for free product = LNAPL (Light non-aqueous phase liquids)

All other COC's

Chlorinated Solvents, PCB's, or Fuel Oxygenates

100 feet

X6. Typical COC for the Vapor Encroachment Screen

Acenaphthene	Carbon tetrachloride	Dichlorodifluoromethane	Hexane	N-Nitroso-di-n-butlyamine	Trichloroethylene
Acetaldehyde	Chlordane	1,1-Dichloroethane	Hydrogen cuanide	n-Propylbenzene	Trichlorofluromethane
Acetone	2-Chloro-1,3 butadiene(chloroprene)	1,2-Dichloroethane	Isobutanol	o-Nitrotoluene	1,2,3-Trichloropropane
Acetonitrile	Chlorobenzene	1,1-Dichlorethylene	Mercury (elemental)	o-Xylene	1,2,4-Trimetheylbenzene
Acetophenone	Chlorodibromomethane	1,2-Dichloropropane	Methylacylonitrile	p-Xylene	1,3,5-Trimethylbenzene
Acrolein	Clorodifluoromethane	1,3-Dichloropropane	Methoxychlor	Polychloroinated biphenyls (PCB's)	Vinyl acetate
Acrylonitrile	Chloroethane (ethyl chloride)	Dieldrin	Methyl acetate	Pyrene	Vinyl chloride (chloroethene)
Aldrin	Chloroform	Endosulfan	Methyl acrylate	sec-Butlybenzene	
Alpha-HCH (alphaBCH	2-Chlorophenol	Epichlorohydrin	Methyl bromide	Styrene	
Benzaldahyde	2-Chloropropane	Ethyl ether	Methyl chloride (chloromethane)	tert-Butylbenzene	
Benzene	Chrysene	Ethylacetate	Mehtylcyclohexane	1,1,1,2-Tetrachloroethane	
Benzo(b)fluoranthene	Cis-1,2-Dichloroethylene	Ethylbenzene	Methylene bromide	1,1,2,2-Tetrachloroethane	
Benzylchloride	Crotonaldehyde (2-butenal_	Ethylene oxide	Methylene chloride	Tetrachloroethylene (perchloroethylene)	
Beta-Chloronaphthale	Cumene	Ethylmethacrylate	Methylethylketone (2-butanane)	Toluene	
Biphenyl	DDE	Fluorene	Methylisobutylketone	Trans-1,2-Dichloroethylene	
Bis(2-chloroethyl)ether	Dibenzofuran	Furan	Methylmethacrylate	1,1,2-Trichloro-1,2,2,-trifluoroethane	
Bis(2-chloroisopropyl)ether	1,2-Dibromo-3-chloropropane	Gamma-HCH (Lindane)	MTBE	1,2,4-Trichlorobenzene	
Bis(chloromethyl)ether	1,2-Dibromoethane (ethylene	Heptachlor	m-Xylene	1,1,2-Trichloroethane	
Bromodichloromethane	dibromide	Hexachloro-1,3-butadiene	Maphthalene	trifluoroethane	
Bromoform	1,3-Dichlorobenzene	Hexachlorobenzene	n-Butylbenzene	1,2,4-Trichlorobenzene	
1,3-Butadiene	1,2-Dichlorobenzene	Hexachlorocyclopentadiene	Nitrobenzene	1,1,2-Trichloroethane	
Carbon disulfide	1,4-Dichlorobenzene	Hexachloroethane	2-Nitropropane	1,1,1,-Trichloroethane	

APPENDIX F

INTERVIEW DOCUMENTATION

Interview Documentation —1000-1004 South 4th Street, Clinton, IA

Mr. Dan Keis and Mrs. Margaret (Peg) Keis — Owners, 1000 South 4th Street
Phone — (563) 243-4402
Contacted by telephone on February 13, 2018 by Mr. Branden Scott.

Mr. Paul Steines — Owner, 1004 South 4th Street
Phone — (563) 249-3243
Contacted by telephone on February 13, 2018 by Mr. Branden Scott.

Mr. Jeff Chapman, Battalion Chief — Clinton Fire Department
Phone — (563) 242-0125
Email — jchapman@clintonfd.us
Attempted to contact by email on February 9, 2018 by Mr. Branden Scott. Attempted to contact by email again on February 19, 2018 by Mr. Branden Scott. Attempted to contact by telephone on February 20, 2018 by Mr. Branden Scott and left a voice message. Mr. Chapman responded on February 20, 2018 indicating that he would look into the properties. Mr. Scott again contacted Mr. Chapman on February 26, 2018. At the time of this report's completion, a response from the city fire department has not been received. Upon receipt of information that might weigh on this report's findings, Impact7G will issue an addendum.

Mr. Chance Kness, Coordinator — Clinton County Emergency Management
Phone — (563) 242-5712
Email — kness@clintoncounty-ia.gov
Contacted by email on February 9, 2018 by Mr. Branden Scott; response received on February 9, 2018.

JP Rental Development LLC — Owner, 1002 South 4th Street
Contact information for this property owner could not be located. According to the City Engineer, Jason Craft, access to the building could not be arranged.

Phase I Environmental Site Assessment
User Questionnaire
(From Appendix X.3 of ASTM E 1527-13)

In order to qualify for one of the *Landowner Liability Protections (LLP)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries:

Please include any lengthy responses on a separate sheet and refer to the number or letter of the item from this page.

1. Did a search of *recorded land title records* (or judicial records where appropriate) identify any type of environmental liens filed or recorded against the Property under federal, tribal, state or local law? (*Environmental cleanup liens that are filed or recorded against the Property [40 CFR 312.25]*)

   No

2. Did a search of *recorded land title records* (or judicial records where appropriate) identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the Property and/or have been filed or recorded against the Property under federal, tribal, state or local law? (*Activity and use limitations that are in place on the Property or that have been filed or recorded against the Property [40 CFR 312.26(a)(1)(v) and (vi)]*)

   No

3. As the User of this Environmental Site Assessment (ESA), do you have any specialized knowledge or experience related to the Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Property or adjoining properties so that you would have specialized knowledge of the chemicals and processes used by this type of business? (*Specialized knowledge or experience of the person seeking to qualify for the LLP [40 CFR 312.28]*)

   No

4. Does the purchase price being paid for this Property reasonably reflect the fair market value of the Property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Property? (*Relationship of the purchase price to the fair market value of the Property if it were not contaminated [40 CFR 312.29]*)

   No

5. Are you aware of commonly known or reasonably ascertainable information about the Property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

   (a.) Do you know the past uses of the Property? Yes

   (b.) Do you know of specific chemicals that are present or once were present at the Property? No

   (c.) Do you know of spills or other chemicals that have taken place at the Property? No

   (d.) Do you know of any environmental cleanups that have taken place at the Property? No

   (*Commonly known or reasonably ascertainable information about the Property [40 CFR 312.30]*)

6. As the User of this ESA, based on your knowledge and experience related to the Property, are there any obvious indicators that point to the presence or likely presence of contamination at the Property? (*The degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation [40 CFR 312.31]*)

   No

APPENDIX G

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Branden Scott – Environmental Specialist

Mr. Branden Scott is an Environmental Scientist with experience with environmental permitting, Section 106 compliance projects, environmental permitting, and Phase I environmental site assessments in accordance with ASTM 1527-13 standards. Mr. Scott has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, completed interviews, and prepared Phase I ESA reports. He also has significant experience in archaeological/architectural documentation, historic property research, and utilizing surveying equipment including GPS and total stations for field mapping.

Eric Lindeen – Environmental Specialist

Mr. Eric Lindeen is an Environmental Specialist with experience on a variety of environmental projects involving the National Environmental Policy Act (NEPA) process, environmental permitting, wetland delineations, and Phase I environmental site assessments in accordance with ASTM 1527-13 standards. Mr. Lindeen has experience completing site inspection; local, state, and federal environmental database review; historical information review; and conducting interviews. Mr. Lindeen holds a B.A. in Geography from the University of Northern Iowa.

Michael Fisher, REM – Vice Presient/Principal

As Vice President of Impact7G, Mike is responsible for business development, client management, project management, contracts review, and working with the other principals to facilitate change as Impact7G grows in service offerings and client base in the coming years. Mike has 25 years of consulting experience including environmental and energy business line management as well as Board of Director responsibilities at an Engineering News Record (ENR) top 200 engineering design firm. Mike also applies his long-running technical expertise in the renewable energy, brownfields redevelopment, and environmental planning market areas. His environmental experience includes extensive experience with the National Environmental Policy Act (NEPA) and brownfields redevelopment. He is also a multi-media environmental compliance expert. Mike spent much of the last decade continuing to work on environmental projects while also facilitating development of multi-megawatts of distributed wind and solar projects. Consistent with Impact7G's mission, Mike's objective is to foster utilization of our natural resources in a manner that supports a sustainable future for generations ahead.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Clinton County, Iowa
Survey Area Data: Version 23, Sep 26, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 3, 2011—Jul 20, 2016

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
162C2	Downs silt loam, 5 to 9 percent slopes, moderately eroded	0.3	100.0%
Totals for Area of Interest		**0.3**	**100.0%**

Clinton County, Iowa

162C2—Downs silt loam, 5 to 9 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2tc4v
Elevation: 560 to 1,740 feet
Mean annual precipitation: 31 to 39 inches
Mean annual air temperature: 41 to 50 degrees F
Frost-free period: 120 to 190 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Downs, moderately eroded, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Downs, Moderately Eroded

Setting

Landform: Hillslopes
Landform position (two-dimensional): Shoulder, backslope, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Loess

Typical profile

Ap - 0 to 8 inches: silt loam
BE - 8 to 17 inches: silt loam
Bt1, Bt2 - 17 to 33 inches: silty clay loam
Bt3 - 33 to 39 inches: silt loam
BC - 39 to 48 inches: silt loam
C - 48 to 79 inches: silt loam

Properties and qualities

Slope: 5 to 9 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.14 to 1.42 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 11.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Nasset, moderately eroded

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Newvienna, moderately eroded

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Downs

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

RE: Certificate of No Further Action for a Leaking Underground Storage Tank (LUST) Remediation
Registration Number: 199017193
[redacted]

Dear Mr & Mrs Tague:

Attached to this letter is your No Further Action certificate applicable to the above-referenced underground storage tank (UST) site.

This certificate is valid only for the site referenced on the face of the certificate. This certificate may be filed with the Recorder of the county in which the USTs are located as provided in Iowa Code Section 455B.474(1)(h).

The issuance of this certificate does not prevent the Department from requiring further corrective action at the site if a new petroleum release occurs or if a previously unknown or unforeseen risk condition should arise. The Department is prevented by law from requiring a property owner or responsible party from conducting further corrective action if the only reason is a change in action levels. See Iowa Code section 455B.474 (1)(h)(3).

Property owners who are not owners of USTs at the site and have not been responsible for a new release or aggravation of the historical contamination would not generally be considered responsible for taking corrective action if regulation of the site is reopened in the future. In addition, a state fund has been created which provides discretionary funds for the Department to use if further corrective action is required at the site in the future. See Iowa Code 455G.9(1)(k), as amended by 2000 Iowa Acts, S.F. 2433, Section 15.

This certificate should not be relied upon as a warranty or representation the site is for all purposes and under all circumstances environmentally clean. Residual concentrations of soil or groundwater contamination may remain at the site. Public files are available which better describes the contaminated conditions documented at the site.

If you have any additional questions concerning this certification, please contact the Underground Storage Tank Section of the Iowa Department of Natural Resources at the address given below or you may call 515/281-8941.

Sincerely,

JAMES R. HUMESTON, SUPERVISOR
UNDERGROUND STORAGE TANK SECTION

IOWA DEPARTMENT OF NATURAL RESOURCES

CERTIFICATE OF NO FURTHER ACTION

This document certifies that the referenced underground storage tank site has been classified by the Iowa Department of Natural Resources (IDNR) as "no further action" as provided in 1995 Iowa Code Section 455B.474(1)(h), as amended by 1995 Iowa Acts, H F 508 Section 10. This certificate may be recorded as provided by law.

Owner/Operator of Tank(s):	TIM AND TRICIA TAGUE	
Date of Issuance:	June 20, 2003	
IDNR File References:	Registration Number	199017193
	LUST Number	9LTI80

Legal Description of Underground Storage Tank Site

LOT 8 AND THE NORTH 46 FEET AND 8 INCHES OF LOTS 9 AND 10 IN BLOCK 20 IN SOUTH CLINTON, WITHIN CLINTON, IOWA LOT 8, BLOCK 20, SOUTH CLINTON, WITHIN THE CITY OF CLINTON, IOWA LOTS 7 AND 8 AND THE NORTH 114-2/3RDS' OF LOTS 9 AND 10, IN BLOCK 20 (EXCEPT A PIECE IN THE NE CORNER OF BLOCK 20), IN SOUTH CLINTON WITHIN CLINTON, IOWA

Issuance of this certificate does not preclude the IDNR from requiring further corrective action due to new releases or releases from unknown sources and is based on the information available to date. The department is precluded from requiring additional corrective action solely because government action standards are changed. See Iowa Code Section 455B.474(1)(h), as amended by Iowa Acts, H F 508 Section 10.

This certificate does not constitute a warranty or representation of any kind to any person as to the environmental condition, marketability or value of the above referenced property other than that certification required by 1995 Iowa Acts, H F 508 Section 10.

1.0 EXECUTIVE SUMMARY

The East Central Intergovernmental Association (ECIA) contracted with Impact7G to perform a Phase II Environmental Site Assessment (Phase II ESA) for 1000-1006 South 4th Street in Clinton, Iowa (Property). The objective of this Phase II ESA was to evaluate recognized environmental conditions identified in the February 28, 2018 Phase I Environmental Site Assessment (ESA) completed by Impact7G in conformance with the scope and limitations of ASTM Practice E 1527-13. Recognized Environmental Conditions (RECs) identified in the Phase I ESA requiring additional assessment included:

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port was capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or the date of removal use of the UST was found. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil.. Based on the lack of information regarding the UST removal, a release of heating oil from the UST that has resulted in an impact to the subsurface of the Property cannot be ruled out. Furthermore, it is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site.

According to city directories, an auto repair/auto sales shop was located approximately 70-feet west on the adjacent property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals.. Therefore, the historic use of this property as an auto sales and body shop represent a REC to the Property.

Impact7G's conclusions are rendered in accordance with generally accepted professional standards but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

2.0 INTRODUCTION

2.1 Purpose

The ECIA contracted with Impact7G to perform a Phase II ESA for the Property located at 1000-1006 South 4th Street in Clinton, Iowa (Property). The objective of this Phase II ESA was to evaluate recognized environmental conditions identified in the February 28, 2018 Phase I ESA completed by Impact7G in conformance with the scope and limitations of ASTM Practice E 1527-13. RECs were identified in the Phase I ESA requiring additional assessment. The data gathered during this limited investigation has been compared to the risk-based standards outlined in Iowa Administrative Code (IAC) 567 *Chapter 137: Iowa Land Recycling Program (ILRP) and Response Action Standards.*

2.2 Problem Statement

The RECs identified in the Phase I ESA requiring additional assessment included:

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port was capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or the date of removal use of the UST was found. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil. Based on the lack of information regarding the UST removal, a release of heating oil from the UST that has resulted in an impact to the subsurface of the Property cannot be ruled out. Furthermore, it is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site.

According to city directories, an auto repair/auto sales shop was located approximately 70-feet west on the adjacent property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. Therefore, the historic use of this property as an auto sales and body shop represent a REC to the Property.

3.0 BACKGROUND

The Property is located within the SE ¼, NW ¼, SW ¼ Section 6, Township 81 North, Range 7 East and is further located at approximately 41º 50’ 06” North latitude and 90º11’ 36.36” West longitude (see Figure 1, Appendix B).

3.1 Site Characteristics

The Property is located at 1000-1006 South 4th Street in Clinton, Iowa. The Property parcel number, owners, location and description are presented on the following Table 1.

Table 1 – Site Characteristics

Parcel # & Owner	Location	Description(s)
80-59700000, Keis Daniel H & Margaret	413 10 Ave. South	2,160 square ft^2 brick warehouse structure constructed in 1864 (0.05 acres)
80-59730000 JP Rental Development LLC	1002 South 4th Street	2,808 ft^2 two-story brick structure constructed in 1868 (0.064 acres)
80-59740000 Sap Rentals LLC	1004 South 4th Street	5,028 ft^2 three-story brick structure constructed in 1900 (0.052 acres)
8059750000 Series 1 and Widener Donald G	1006 South 4th Street	11,700 ft^2 three-story brick warehouse constructed in 1900 (0.116 acres)

3.2 Principal User

The principal end user of project information is ECIA. Further reliance by others is beyond the scope of this project.

4.0 INVESTIGATION ACTIVITIES

The intent of this Phase II ESA is to evaluate RECs identified in the February 28, 2018 Phase I ESA for the Property. The sampling plan was detailed in a proposal provided to ECIA on October 1, 2018. The proposal recommended advancing three (3) soil borings on the Property for the collection of soil and groundwater samples. Given the site constraints, including a concrete basement floor and sump pit located in the basement 1000 South 4th Street, soil samples were not collected from the area of the fuel oil UST and sump pit. On October 29, 2018, five (5) soil borings SB-1, SB-2, SB-3, SB-4 and SB-5 were advanced to a maximum dept of 12-feetbgs using a track mounted, direct push Geoprobe® drill rig. SB-1 was advanced near the Property boundary; SB-3 was advanced on the southwest corner of the Property; SB-3 was advanced on the southwest corner of the Property; SB-4 was advanced on the east side of the Property; and SB-5 was advanced near the northeast corner of the Property (See Figure 2 in Appendix B).

Soil samples were collected using a direct-push Geoprobe® with acetate liners. Soil samples were collected, bagged and screened in two-foot intervals for volatile organic compounds (VOCs) using a photoionization detector (PID). PID readings were used to select the sample intervals to be submitted for laboratory analysis. The interval with the highest PID reading was sampled and submitted for laboratory analysis. For VOCs analyses, if there are no PID readings above ppm, or there are no obvious visual indicators of contamination, the soil samples were collected just above the perceived groundwater table. Surface soil samples from each soil boring location were collected from 0 to 2-feet bgs and submitted for laboratory analysis of Resource Conservation and Recovery Act

(RCRA) metals using EPA Methods 6010C and 7471B/6020A and 7470A. Soil samples were collected at the depth of the perceived groundwater table from 7 to 9-feet bgs from soil boring locations SB-2 through SB-5 for analysis of VOCs by EPA Method 8260C, semi-volatile organic compounds (SVOCs) by EPA Method 8270D and total extractable hydrocarbons (TEHs) by Iowa Method OA-2. Groundwater was not detected in SB-1 and therefore a soil sample from the 7 to 9-feet bgs interval was not collected.

Following the completion of soil sampling, each soil boring was converted into temporary monitoring wells utilizing 1-inch diameter polyvinyl chloride (PVC) screen and riser. Enough volumes of groundwater for collection did not recharge into any of the temporary groundwater monitoring wells constructed at the Property during the October 29, 2018 investigation, thus groundwater was collected as part of this assessment. Each of the well casings were removed from each soil boring location and were then subsequently backfilled with granular bentonite.

4.1 Soil Assessment

Subsurface conditions generally consisted of fine to course alluvial sand with silt underlain with dolomitic limestone between 10 and 12-feet bgs. Groundwater was detected in fine to course sand and gravel alluvial deposits located between 7 and 8-feet bgs. No petroleum odors were detected, and no visible petroleum staining was observed in any of the soil borings. In addition, all PID measurements registered 0.0 ppmv by volume. Soil boring logs are included in Appendix D. The following table summarizes those analytical constituents detected above their respective laboratory reporting limits. The detected concentrations were below the most restrictive ILRP SWS for soil. Complete laboratory analytical reports are included in Appendix C.

Table 2 – Soil – RCRA Metals (mg/Kg)

Constituent	SB-1 0-2-feet	SB-2 0-2-feet	SB-3 0-2-feet	SB-4 0-2-feet	SB-5 0-2-feet	Protected Statewide Standard For Soil
RCRA Metals						
Arsenic	<11.3	**13.3**	<3.48	<7.98	<3.46	**17**
Barium	**54.6**	**149**	**52.5**	**28**	**59.8**	**15,000**
Cadmium	<2.81	2.27	<0.871	<1.99	<0.864	**70**
Chromium	**9.46**	**13.8**	**11.8**	**8.25**	**12.7**	**190**
Lead	**89.2**	**242**	**5.20**	<9.97	**26.6**	**400**
Mercury	**0.165**	**0.843**	<0.0186	0.0593	**0.158**	**23**

Bold results indicate analytical results greater than laboratory's method of detection and/or reporting limit.
Shaded results indicate analytical results that exceed the Protected Statewide Standard
NE = Not Established
NT=Not Tested

4.2 Groundwater Assessment

Upon completion of soil sampling activities, each soil boring was converted into temporary groundwater monitoring wells completed with a 1-inch inside diameter (ID) PVC riser and 1" ID 0.01" slotted PVC pipe screen. Moist sand with silt was encountered between 7 and 8-feet below grade; however, enough volumes of groundwater for collection did not recharge into any of the temporary groundwater monitoring wells constructed at the

Property during the October 29, 2018 investigation, thus groundwater was collected as part of this assessment.

5.0 DEVIATIONS FROM SCOPE

Site constraints including a concrete basement floor and sump pit located in the basement 1000 South 4th Street, soil samples were not collected from the area of the fuel oil AST and sump pit.

6.0 FINDINGS AND CONCLUSIONS

The detected RCRA metals concentrations from soil samples collected at the Property were below the most restrictive DNR ILRP SWS for soil or below laboratory reporting limits.

7.0 RECOMMENDATIONS

Based on the findings and conclusions resultant of data collected during this Phase II ESA, no further action is recommended apart from additional investigation in the Property basement to further evaluate the presence of a suspected UST. Impact7G's conclusions are rendered in accordance with generally accepted professional standard but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

Signatures of the environmental professionals responsible for this report:

James Goodrich, Report Preparer

Amber Haukedahl, Environmental Specialist II, Quality Control / Quality Assurance

Mike Fisher, Project Manager, VP

APPENDIX A

Qualifications

Project Qualifications

Michael Fisher, REM – *Principal*

As Vice President of Impact7G, Mike is responsible for business development, client management, project management, contracts review, and working with the other principals to facilitate change as Impact7G grows in service offerings and client base in the coming years. Mike has 25 years of consulting experience including environmental and energy business line management as well as Board of Director responsibilities at an Engineering News Record (ENR) top 200 engineering design firm. Mike also applies his long-running technical expertise in the renewable energy, brownfields redevelopment, and environmental planning market areas. His environmental experience includes extensive experience with the National Environmental Policy Act (NEPA) and brownfields redevelopment. He is also a multi-media environmental compliance expert. Mike spent much of the last decade continuing to work on environmental projects while also facilitating development of multi-megawatts of distributed wind and solar projects. Consistent with Impact7G's mission, Mike's objective is to foster utilization of our natural resources in a manner that supports a sustainable future for generations ahead.

Amber Haukedahl – *Environmental Specialist*

Amber is an Environmental Specialist with experience on a variety of environmental projects including, but not limited to, Phase 1 Environmental Site Assessments, assisting in sampling for Phase II projects, wetland delineations, cultural surveys, and conducting avian and plant surveys. Mrs. Haukedahl holds an M.S. degree in Conservation Biology with many years of extensive field experience. Mrs. Haukedahl has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, and completed interviews. Mrs. Haukedahl is certified as a Lead Risk Assessor in Minnesota and Iowa.

James Goodrich - Senior Environmental Specialist

Mr. Goodrich has 18 years of consulting experience in the environmental industry and has worked on a variety of projects including Phase I Environmental Site Assessments, Phase II Environmental Site Assessments, asbestos inspections and reporting, lead based paint inspections, wetland delineation and mitigation planning, threatened and endangered species assessments, contaminant risk based corrective action assessments, environmental reconnaissance and permitting, and petroleum spill mitigation management services. Mr. Goodrich has facilitated multiple remedial investigations and environmental permitting projects, with specific responsibilities in budget preparation and review, project reporting, acting as liaison between regulatory agencies and the client, and conducting quality review and assurance.

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Impact7G, Inc
Project/Site: 1000-1006 South 4th Street

TestAmerica Job ID: 310-142789-1

Client Sample ID: SB-5 7-9 — Lab Sample ID: 310-142789-14

No Detections.

Client Sample ID: Duplicate — Lab Sample ID: 310-142789-15

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	98.9		2.03		mg/Kg	2	☼	6010C	Total/NA
Cadmium	2.85		2.03		mg/Kg	2	☼	6010C	Total/NA
Chromium	10.7		2.03		mg/Kg	2	☼	6010C	Total/NA
Lead	157		10.1		mg/Kg	2	☼	6010C	Total/NA

This Detection Summary does not include radiochemical test results.

Client Sample Results

Client: Impact7G, Inc
Project/Site: 1000-1006 South 4th Street

TestAmerica Job ID: 310-142789-1

Client Sample ID: SB-1 0-2
Date Collected: 10/29/18 13:20
Date Received: 10/30/18 14:10

Lab Sample ID: 310-142789-1
Matrix: Soil
Percent Solids: 92.5

Method: 6010C - Metals (ICP)

Analyte	Result	Qualifier	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: Impact TG

City/State: Coralville, IA | Project: 1000-1006 South 4th St

Receipt Information

Date/Time Received: 1/03/18 1410 | Received By: TO

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee ☐ TA Courier ☐ TA Field Services ☑ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID: 35016

Multiple Coolers? ☐ Yes ☑ No *If yes:* Cooler # ____ of ____

Cooler Custody Seals Present? ☑ Yes ☐ No *If yes:* Cooler custody seals intact? ☑ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☑ No

Trip Blank Present? ☐ Yes ☒ No *If yes:* Which VOA samples are in cooler? ↓

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: N | Correction Factor (°C): 0.0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 1.4 | Corrected Temp (°C): 1.4

• **Sample Container Temperature**

Container type(s) used:

Uncorrected Temp (°C): | Corrected Temp (°C):

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding. If no, proceed with login

Additional Comments

* Sample ID SB-3 0-2, SB-4 0-2, SB-5 0-2 does not match COC. All samples are labled SB-3 1-2 SB-4 1-2 SB-5 1-2

Document: CF-LG-WI-002
Revision: 23
Date: 12/31/2017

TestAmerica-Cedar Falls

General temperature criteria is 0 to 6°C

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

APPENDIX E

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS AND ENVIRONMENTAL PROFESSIONAL STATEMENT

ENVIRONMENTAL PROFESSIONAL STATEMENT

I, Krista A. Brodersen, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Krista A. Brodersen
Senior Project Manager

Krista Brodersen

EDUCATION
B.S. Environmental Science, Southern Illinois University, 1996

CERTIFICATIONS
- 40-HR HAZWOPER
- 8-HR HAZWOPER Supervisor
- CPR and First Aid

WORK HISTORY
Blackstone Environmental, Senior Project Manager, October 2019 – present

Terracon Consultants, Senior Project Manager, 2013 – 2019

Union Bank, Assistant Vice President, 2010 – 2013

Ninyo & Moore, Senior Project Manager, 2003 – 2010

ATC Associates, Senior Staff Scientist, 2001 – January 2003

American Integrated Services, Assistant Project Manager, March 2001 – July 2001

Ceres Associates, Environmental Specialist, 1999 – 2001

PROFESSIONAL EXPERIENCE

Ms. Brodersen has more than 20 years of environmental consulting experience including Phase I ESAs, Phase II Investigations, environmental cleanups, remediation system installation and monitoring, indoor air quality investigations, NEPA compliance, underground storage tank closures, and RBCA assessments. She has conducted work under the Illinois Environmental Protection Agency (IEPA), Iowa Department of Natural Resources (IDNR), California Underground Storage Tank (UST) Cleanup Fund, the California Regional Water Quality Control Board (CRWQCB), California Department of Toxics and Substances Control (DTSC), the California Integrated Waste Management Board (CIWMB), and various voluntary remediation programs and brownfield programs. She manages and supports projects for public, private, and industrial sector clients.

PROJECT EXPERIENCE

Phase I Environmental Site Assessments: Ms. Brodersen has been responsible for performing and reviewing Phase I ESAs on multiple sites throughout the United States under the provisions of ASTM E-1527-05 and ASTM E-1527-13. The Phase I ESA reports were conducted for various financial institutions, government agencies, land developers, and private buyers. Sites have included residential, commercial, and industrial properties. Ms. Brodersen has completed over 300 hundred Phase I ESAs in Iowa since 2013.

Phase II Investigations: Ms. Brodersen has managed and conducted Phase II subsurface investigations for industrial, commercial, and residential properties utilizing various technologies including hand-auger, hollow-stem and direct-push drilling methods. She has experience pertaining to soil and groundwater impacted by various contaminants including petroleum hydrocarbons, chlorinated and non-chlorinated solvents, pesticides, polychlorinated bi-phenyls (PCBs), and Resource Conservation and Recovery Act (RCRA) metals. The investigations have included sampling and profiling of excavated contaminated soil for off-site disposal at licensed facilities. Ms. Brodersen has completed over a hundred Phase II Investigations in Iowa since 2013.

Phase II Investigation, Davenport, IA: A Phase II investigation was conducted to assess a former manufacturing/gasoline station property in Davenport, Iowa. The Phase II included conducting a geophysical survey and collection of soil, groundwater, and soil vapor samples from in and outside of the site buildings. The investigation identified lead and semi-volatile organics in soil and volatile organics in the soil vapor. The overall proposed remedial alternatives included excavation of impacted soil and vapor mitigation at the site buildings.

Voluntary Cleanup Programs: Ms. Brodersen has worked on several Site Remediation Program (SRP) projects for private clients In Illinois. These projects have included all aspects of the SRP program including preparing applications, completing Phase I ESAs, preparing work plans, completing site investigation field activities and reporting, contaminant modeling, preparing risk-based corrective action reports, and IEPA coordination.

Risk-based Clean Up: Managed the investigation and remediation of a former gasoline station property in Moline, Illinois. The site was impacted by petroleum hydrocarbons and metals from the former gasoline station and buried garbage found on the site. Excavated and removed approximately 700 tons of impacted soil and buried garbage, sampling of clean import backfill to 25 feet, and soil confirmation sampling. Prepared Site Investigation Report, Remedial Action Report, Remedial Action Plan, and Remedial Action Completion Report that were approved by the IEPA. Obtained site closure from the IEPA.

Environmental Site Closure and Remediation: Managed oversight of Remedial Action Plan (RAP) implementation at a six-acre property identified by the Los Angeles Unified School District as a potential future school site. The site was impacted with elevated levels of tetrachloroethene (PCE) in soil vapor. The project consisted of oversight and monitoring of the excavation of approximately 75,000 tons of impacted soil, sampling of excavated material, sampling of clean import backfill to 25 feet, soil and soil vapor confirmation sampling, dust monitoring, risk assessment, installation of sixteen vapor cutoff wells between the school and the upgradient adjacent PCE source, and appropriate waste characterization based on sample results. During RAP implementation, three USTs, two pressure vessels, a buried 55-gallon drum, clarifier, hydraulic hoist, sump, and soil impacted by organochlorine pesticides were discovered and removed. The property was granted regulatory closure and a school was constructed onsite.

Environmental Remediation: Oversaw soil sampling, soil vapor sampling, the installation and development of numerous groundwater monitoring wells, conducting quarterly groundwater monitoring, and installation and maintenance of a remediation system for a commercial property formerly occupied by two separate gasoline stations. Ms. Brodersen also managing staff during quarterly monitoring of the property, reviewed quarterly reports, and interacted with the State regulatory agencies. The site was under the oversight of the CRWQCB and was included in the in the California UST Cleanup Fund.

Superfund Site: Assisted with the management of the remediation of a pesticide contaminated Superfund Site in Riverside, California. Her duties at the Superfund site included health and safety monitoring, collecting soil samples, preparation of analytical data, coordination of construction workers, client interface, preparation of hazardous waste manifests, coordination of vendors, and preparation of site maps and data tables.

Environmental Assessments (EAs)/HUD Checklists: Performed EAs/HUD Checklists on several properties throughout Iowa. These assessments included determining the effect of additions and new structures on the environment utilizing information from available sources such as, endangered species reports, wetlands determination, FCC regulations, and listed tribal and regulatory databases, State and Federal regulatory agencies.

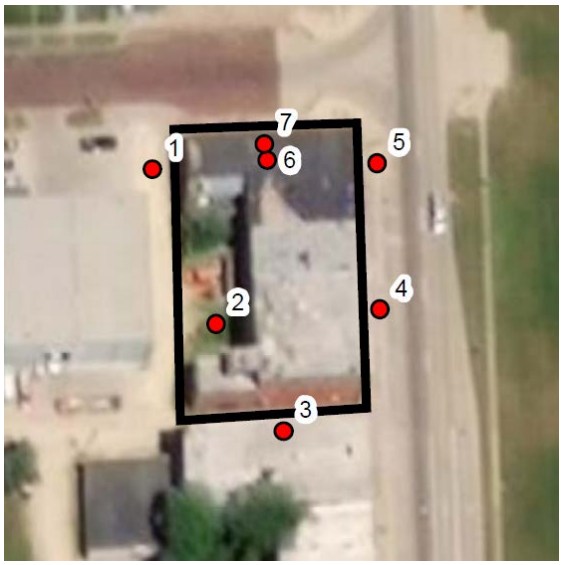
PROFESSIONAL EXPERIENCE

Ms. Ferguson is a professional geologist with over 20 years of experience throughout the Midwest working for private and public clients on environmental, engineering, and compliance related projects. She graduated from the Missouri University of Science and Technology in 1998 with a Bachelor of Science degree in Geological Engineering. The majority of her experience lies in management and completion of environmental site assessments, risk based corrective action (RBCA) and risk evaluation site investigations, construction management and oversight, and remedial actions.

PROJECT EXPERIENCE

Retail Petroleum, Underground Storage Tank (UST) Program Management, Kansas and Missouri: Acted as project manager and technical lead at over 40 sites in Kansas and Missouri for five large petroleum retail companies. Projects encompassed various stages of site investigation, risk assessment, and remedial action. Specific responsibilities included supervision of UST closure and reporting, removal and containment of contaminated soil, groundwater, and hazardous waste, site characterization, groundwater monitoring, technical oversight of field activities, development of remedial action plans, risk assessment evaluation, and preparation of technical reports.

Air National Guard, Kansas and Nebraska: Acted as project manager, technical lead and field manager for the completion of site assessment and risk assessment activities at two Air National Guard bases in Kansas and Nebraska. Provided technical evaluation and project management for multiple facilities within each installation including oil water separator, bulk fuel, and chemical storage facilities and current and former equipment and aircraft maintenance facilities.



Spill Prevention, Control, and Countermeasures (SPCC) Plan and Storm Water Pollution Prevention Plan (SWPPP), Kansas and Missouri: Acted as local lead and contact for the completion of SPCC Plans and SWPPPs for various facilities including agricultural, maintenance, chemical storage, and transportation facilities.

Army Corps of Engineers, Air Force Civil Engineer Center, Scott Air Force Base, Illinois: Task manager and field manager at multiple hazardous waste sites located at Scott Air Force Base in Illinois. Sites included former gasoline stations, bulk fuel facilities, fire training facilities, housing developments, oil water separators, landfills, shooting ranges, and ammunition depots

Kansas City Power and Light Entertainment District and Sprint Arena, Kansas City, Missouri: Field manager for various activities during demolition and construction of multiple city blocks within a large planned entertainment district that included state Brownfields redevelopment.

2. Parcel Numbers: 80-59700000, 80-59730000, 80-59740000, and 8059750000
3. Common Address: 1000-1006 South 4th Street, Clinton, Iowa 52732
4. ACRES Property ID Number: 227105 (1006-1008 S 4th Street), 227104 (1004 S 4th Street), 227103 (1002 S 4th Street), 227102 (1000 S 4th Street)
5. Access Agreement Signed By Owner(s) and Attached: __No __Pending _X_ Yes (for 1002 S. 4th Street)
6. Have Property Conditions changed since Phase I and II ESA? __X____No __Yes

V. PURPOSE OF ACTIVITIES

On February 3rd and February 28th, 2018, Impact7G completed Phase I Environmental Site Assessments (ESAs) on the Subject Property in Clinton, Iowa (Property), in conformance with the scope and limitations of ASTM Practice E 1527-13. Recognized Environmental Conditions (RECs) identified in the Phase I ESA requiring additional assessment included:

- One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

- A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a REC to the Property.

- According to historic documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent a REC to the Property.

The above conditions will be further assessed through this work scope.

VI. PROPERTY SPECIFIC SAMPLING DESIGNS

Soil and groundwater sample locations are based upon the environmental conditions identified in the February 3rd and February 28th, 2018 Phase I ESAs. All sampling is considered point-source sampling. Soil and groundwater sampling locations are shown on Figure 2 – Sample Location Map in Attachment 1. Sampling locations may be adjusted based on field observations or as necessary to avoid obstructions or utilities. The Sampling Plan table references the soil and groundwater sampling parameters to be collected at each location. Impact7G typically uses a 3-day/72-hour laboratory turnaround time.

Soil Data Collection Locations

Seven (7) soil boring locations will be placed on the target property parcel (See Figure 2 – Sample Location Map in Attachment 1).

Soil samples will be collected using a direct-push geoprobe with acetate liners. Soil samples will be collected and bagged to be screened in two-foot intervals for volatile organic compounds (VOCs) using a photoionization detector (PID). PID readings will be used to select the sample intervals to be submitted for laboratory analysis. The interval with the highest PID reading will be sampled and submitted for laboratory analysis. The PID sampling procedure/method will be according to manufacturer's recommendations. For VOCs and SVOCs analyses, if there are no PID readings above 10 ppm, or there are no obvious visual indicators of contamination, a soil sample will be collected just above the perceived water table. In addition, surface soil samples will be collected for Resource Conservation and Recovery Act (RCRA) metals and total extractable hydrocarbons hydrocarbons (TEHs) from 0 to 2 and 2 to 4 feet below ground surface (bgs). The 2 to 4 feet bgs samples will be held pending analytical results from the 0 to 2 foot bgs samples and will only be analyzed if the 0 to 2 foot sample results exceed applicable Iowa Department of Natural Resources Statewide Standards.

Groundwater Data Sample Locations

If groundwater is encountered, samples will be collected from soil borings SB1, SB2, and SB3 using a 1-inch diameter, 4-foot stainless steel screen-point sampler. The screen-point sampler will be driven to the desired depth (just below the soil/groundwater interface) and the groundwater will be purged and sampled using a peristaltic pump with disposable polyethylene tubing. Proposed groundwater sampling locations will occur at the boring locations shown on Figure 2 - Sample Location Map in Attachment 1. The following tables reference the sampling parameters to be collected.

Soil/Groundwater Sampling Locations & Rationale

REC/Rationale	Boring(s)/ Monitoring Well(s)	Substance Identification/Characterization
Vent pipe and fill port in basement of Target Property; brick-lined well/cistern in basement of Target Property; Adjacent historic auto repair/sales (See Section V for additional information)	SB1, SB2, SB3	VOCs, SVOCs, RCRA Metals**, TEHs

**The groundwater samples will be field filtered and reported as dissolved RCRA metals.

Soil and Groundwater Sampling Plan

Sampling Location	Sample Depth	VOCs		SVOCs		TEHs		RCRA Metals	
		Soil	GW	Soil	GW	Soil	GW	Soil	GW
SB1	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
SB2	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	

Sampling Location	Sample Depth	VOCs		SVOCs		TEHs		RCRA Metals	
		Soil	GW	Soil	GW	Soil	GW	Soil	GW
	2-4'	--		--		1(H)**		1(H)**	
SB3	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
SB4	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
SB5	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**

	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
SB7	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
Dup	TBD*	1	1	1	1	--	1	--	1
	0-2'	--		--		1		1	
	2-4'	--		--		1(H)**		1(H)**	
QA/QC	Field Blank	0	1	0	0	0	0	0	0
	Trip Blank	0	1	0	0	0	0	0	0
Number to Analyze		8	8	8	8	16**	8	16**	8

*Soil sample depths for VOCs and SVOCs will be determined based on field screening results.
**Soil samples to be analyzed for RCRA metals and TEHs will be collected from the 0-2' and 2-4' intervals, with the 2-4' samples to be held pending lab analytical results from the 0-2' samples.

Asbestos and Lead Containing Material Data Collection Locations

A complete ACM and LBP survey for the referenced building will be completed per Section XII GENERAL ASBESTOS AND LBP INSPECTION PROCEDURES. A State of Iowa licensed asbestos inspector will perform the survey using sampling methods in accordance with OSHA Regulation 1926.1101 and EPA 40 CFR Part 763 (AHERA). The inspector will collect samples throughout the building of all suspect materials. The sampling strategy will be consistent with appropriate regulations listed in Section XII. The samples collected will then be analyzed in a laboratory for asbestos content via the polarized light microscopy method. According to the above-mentioned standards and regulations, any building material or product that contains more than 1 percent (%) asbestos is considered to be an ACM. Should any sample need further analysis, due to insufficient sample size or inconclusive analysis results, to determine a more precise concentration of asbestos, either the Point Count (PC) method or Transmission Electron Microscopy (TEM) method will be used based on the building material type.

A complete LBP survey for the referenced building will be completed. A State of Iowa licensed LBP inspector will perform the survey of the building per the Iowa Administrative Code, Chapter 70 (Attachment 5) methodology. These guidelines, and additional EPA guidelines, specify using an X-Ray Fluorescence (XRF)

analyzer to detect LBP on coated surfaces within the structure. The inspector will collect samples of all suspect materials and painted surfaces utilizing a sampling strategy that is consistent with appropriate OSHA and for State regulations. The suspected lead containing materials will be analyzed using an X-Ray Fluorescence (XRF) Spectrometer to determine the presence and relative concentration of lead in various locations throughout the building with confirmation samples will be sent to a certified laboratory for analysis by flame atomic absorption spectrometry (AAS). Any confirmation samples will be sent in 2x4" bags. The LBP inspection/analysis base method/procedure to be utilized will be according to Chapter 70 of the Iowa Administrative Code for the Public Health Department (Attachment 5).

Lead-Based Paint (LBP) is defined and evaluated as paint or other surface coatings that contain lead greater than or equal to 1.0 milligram per square centimeter (mg/cm2) or greater than 0.5 percent (%) by weight. LBP is present on any surface that is tested and found to contain lead above these levels, and on any like surface tested in the same room equivalent that has a similar painting history and that is found to be LBP. If any samples require further analysis due to inconclusive analytical results, the sample will be retested with the above-mentioned methods and criteria.

Proposed sampling will include building materials located in the interior and exterior of the building. The number of samples will vary and be further determined as the investigation ensues. Sampling locations will be determined as the survey is being completed but a general overview of the building is included on the General Building Layout Map in Attachment 1.

Proposed Asbestos Sampling Locations

Sample Summary Location	Matrix	# of Samples	Analysis
Interior and exterior of building	Building Materials	Variable	Asbestos
	Painted surfaces	Variable	Lead

VII. CHEMICAL ANALYSES NEEDED

The following tables summarize the number of samples to be collected.

Soil and Groundwater

NUMBER TO ANALYZE		CHEMICAL GROUP	LAB METHOD
Soil	GW		
4	6	VOCs	8260
4	4	SVOCs	8270D
8*	4	TEHs	OA-2
8*	4	RCRA Metals	6010/6020/7471/7470

*Soil samples to be analyzed for RCRA metals and TEHs will be collected from the 0-2' and 2-4' intervals, with the 2-4' samples to be held pending lab analytical results from the 0-2' samples.

Asbestos

NUMBER TO ANALYZE	CHEMICAL GROUP	LAB METHOD	Holding Time/ Preservation	Sampling Containers
Variable	Asbestos	EPA 600/R-93/116	N/A	Sealed 2x4 Bags

Lead-Based Paint

NUMBER TO ANALYZE	CHEMICAL GROUP	LAB METHOD	Holding Time/ Preservation	Sampling Containers
Variable	LBP	AAS	N/A	N/A

VIII. EQUIPMENT LIST

The following table summarizes equipment needed for this project.

EQUIPMENT	REQUIRED FOR THE PROJECT
PID METER	X
BAILERS	
WATER LEVEL METER	X
PRODUCT INTERFACE PROBE	
HAND-HELD GPS	
PERISTALTIC PUMP	X
NITRILE GLOVES	X
PPE	X
HAND AUGER	X
DECON SUPPLIES	driller
DI - WATER	X
ZIP-LOCKS	X
SAMPLE JARS	X
ASBESTOS SAMPLING EQUIPMENT	Certified Asbestos Inspector
XRF SPECTROMETER AND LBP SAMPLING EQUIPMENT	Certified LBP Inspector

IX. HEALTH AND SAFETY (Default Approval Limited to D & D Modified Levels)

Impact7G's Health and Safety Plan will be utilized during on-site activities.

A Site-Specific Health and Safety

___Level D Personal Protective Equipment (PPE): equip., monitor and record accordingly.
_X_Level D Modified PPE: equip., monitor and record accordingly.
___ Level C PPE: equip., monitor and record accordingly.

X. UNANTICIPATED DEVIATIONS FROM DQO/QAPP REFERENCED

Variance: In some instances, asbestos and/or lead based paint (LBP) inspections are needed for properties where redevelopment would likely include building demolition and/or renovation. The general asbestos and LBP inspection sampling protocols and quality assurance information is presented in this Phase II ESA Work Plan and is not generally included in the generic QAPP. All inspections will be completed by a State of Iowa Certified asbestos and LBP inspector while any samples will be submitted to a National Voluntary Laboratory Accreditation Program (NVLAP) certified laboratory with an appropriate chain of custody form.

Necessity To Brownfields Study: The proposed efforts are consistent with the approved Data Quality Objectives and Quality Assurance Project Plan (DQO/QAPP) objectives to evaluate the risk and feasibility of redevelopment options for the target site.

XI. PHASE II FIELD OPERATIONS

1. Procedure for Soil and Solid Media Sampling (QAPP Appendix F)
2. Procedure for Groundwater Sampling (QAPP Appendix F)

XII. GENERAL ASBESTOS and LBP INSPECTION PROCEDURE

The purpose of an asbestos containing materials (ACM) survey is to inspect a property and determine

the type, location, and quantity of any ACM. Property specific survey and sampling strategies are developed in accordance with the American Society for Testing and Materials International (ASTM) E-2356 standard, Occupational Health and Safety Administration (OSHA) Regulation 1926.1101, Iowa Department of Natural Resources (IDNR), National Emissions Standards for Hazardous Air Pollutants (NESHAP) regulations as adopted by the U.S. Environmental Protect Agency (EPA), and Asbestos Hazard and Emergency Response Act of 1986 (AHERA) protocols.

Prior to the collection of samples from suspected ACM, Impact7G or the asbestos subcontractor will research available documentation for information that might indicate that asbestos containing materials (ACM) have been used in the construction and/or maintenance of the building. This document review will familiarize Personnel with the design, construction, and layout of the Building, and will help to identify potential ACM that have been used. A list of documents reviewed will be included in the final report and will include the following:

- All available construction, asbestos-related and lead paint maintenance, and renovation documents (drawings, specifications, plans, blueprints, diagrams, sketches, etc.);
- All available relevant construction or renovation product submittals correspondence;
- On-site inspections and interviews with available building representatives;
- All available prior asbestos surveys, operation and maintenance management plans, asbestos management programs, abatement plans and specifications, and asbestos abatement project records; and
- All available asbestos bulk sampling analytical results.

All locations will be visually inspected, homogeneous area-by homogeneous area, to determine the presence of ACM. All suspect material identified will be categorized by homogeneous area prior to bulk sampling. In addition, random sampling will be conducted. Inaccessible locations that cannot be inspected will be documented and the reason for the inaccessibility will be noted on the Asbestos Field Survey Data Sheet. If obstructions or safety reasons prevent sampling, then the material must be assumed to be asbestos-containing. The certified asbestos inspector will accomplish all tasks necessary to identify all ACM, which will include, but is not necessarily limited to, the following:

- Conduct thorough on-site visual inspections of all accessible areas of the building. During the inspection, the certified asbestos inspector will identify and document the condition of the suspected material, the activity level and potential for disturbance based on usage, and other factors deemed appropriate;
- Indicate all areas of homogeneous material, without regard to the results of subsequent laboratory bulk analysis, either on a set of floor plans, on schematic drawings, or in tabular form;
- Identify all locations where ACM may be present but cannot be sampled, including the reason it cannot be sampled;
- Complete the Field Survey Data Sheet for each homogeneous material, listing all homogeneous areas where ACM with similar physical conditions are identified;
- The certified asbestos inspector will conduct bulk sampling of all friable and non-friable suspected ACM. Sampled locations will be clearly identified on copies of the schematic diagrams (drawings or floor plans), if available, and will be marked with an identification number corresponding to the respective sample number. Each sample will be listed on the Chain of Custody record that will accompany the samples to the laboratory.

The certified asbestos inspector will be responsible for transmittal of the samples to the laboratory and for assuring that the laboratory analyzes each sample identifying the type and amount of asbestos and other components present. The collected samples will be submitted to a National Voluntary Laboratory Accreditation Program (NVLAP) certified laboratory with an appropriate chain of custody form. This lab

will initially analyze each sample according to EPA Method 600/R-93/116 using Polarized Light Microscopy (PLM) analysis. According to the above-mentioned standards and regulations, any building material or product that contains more than 1 percent (%) asbestos is considered to be an ACM. Should any sample need further analysis, due to insufficient sample size or inconclusive analysis results, to determine a more precise concentration of asbestos, either the Point Count (PC) method or Transmission Electron Microscopy (TEM) method will be used based on the building material type. Prior to any renovation or demolition activities on the property, any positively identified ACM will require abatement.

A final report will be completed upon receipt of laboratory results. The report will consist of methods, condition of identified hazardous materials, laboratory results, photographic documentation and sample locations. Laboratory quality assurance information is included in EMLab P&K's Outline of the Laboratory Quality Assurance Program (Attachment 3).

Procedure for LBP Inspections

The purpose of the LBP inspection is to identify sources of LBP within the interior of the site structure. The LBP inspection will consist of collecting paint chip samples from all visible painted surfaces and components within the structure. The procedure for LBP inspections is outlined in Chapter 70 of the Iowa Administrative Code for the Public Health Department (Attachment 5).

SCHEDULE OF ACTIVITIES

SCHEDULE OF ACTIVITIES

The following schedule is proposed to implement the site investigation for this property in accordance with the Generic DQO/QAPP and services of contract for this EPA Brownfields Assessment Grant. Factors such as in clement weather, slow response by public service, slow response by regulatory agencies or other logistics out of Impact7G's control may extend the project milestones by equivalent days.

WEEK NUMBER 1: Submit Phase II Work Plan to EPA Brownfields Project Manager for review & approval

WEEK NUMBER 3: Receive EPA Phase II Work Plan approval

WEEK NUMBER 4: Commence on-property field activities

WEEK NUMBER 5: Complete on-property/area data collection

WEEK NUMBER 7: Receive written laboratory reports

WEEK NUMBER 8: Submit Final Phase II ESA Report to City, DNR and EPA Region 7

1.0 INTRODUCTION

1.1 Quality Assurance Manual Description

1.1.1. This document describes EMLab P&K, LLC's Quality Assurance Program (QAP) for all laboratories and reporting services. EMLab P&K, LLC is a TestAmerica Company operating under joint ownership with TestAmerica Environmental Laboratories. EMLab P&K, LLC's Organizational Chart (Section 19.5) shows the relationship of EMLab P&K, LLC's General Manager to the TestAmerica Inc. CEO. This document is applicable to all EMLab P&K, LLC laboratories. Standard Operating Procedures (SOP's) that describe the execution of the principles outlined in this document can be found within the LabServe Document Control database. EMLab P&K, LLC is a contract laboratory that provides analytical microbiology, indoor air quality, and asbestos testing services for Indoor Air Quality (IAQ) specialists, Industrial Hygienists, and other clients.

1.1.2. The Quality Assurance Manual describes the operating and quality assurance programs in all of the applicable EMLab P&K, LLC laboratories. The criteria for EMLab P&K, LLC's Quality Assurance Manual are defined and outlined in ISO/IEC 17025, 2005 and guidelines established by our accrediting bodies.

1.1.3. The purpose of this manual is to provide a plan to assure the reliability of all laboratory and support services, and to establish administrative, statistical, investigative, preventive, and corrective techniques used to maintain and maximize reliability.

1.1.4. The document is reviewed and all the policies and procedures included in the manual are endorsed and wholly supported by the General Managers, Regional Directors, Quality Assurance Managers, Technical Managers and the EMLab P&K, LLC management team. The manual is reviewed and approved on an annual basis and updated accordingly.

1.2 Analytical Techniques

1.2.1. Analytical techniques include, but are not limited to: (Additional information may be found on the EMLab P&K, LLC website.

- Culturable Air Analysis for fungi and bacteria
- Non-culturable Analysis-Spore Traps for fungal analysis and direct examination for fungal analysis
- Bulk Sample analysis for fungal and bacterial analysis
- Environmental water analysis
- Quantitative culturable analysis for bulks, dusts, swabs, and other samples
- Coliform screening, Sewage clearance, and Sewage Assessment
- Identification of Molds, Bacteria, Legionella, and Yeasts
- Microbiological analysis for Drinking Water
- Materials Testing
- Analysis of machining fluids for microbial organisms
- Asbestos analysis of bulk and air samples
- Allergen testing for cat, dog, dust mites, cockroach, rat, mouse and mold allergens.
- Pollen Identification and Differentiation.

2.0 QUALITY MANAGEMENT SYSTEM

2.1 Quality Management System Objectives

2.1.1. EMLab P&K, LLC laboratories adhere to the international standard ISO Standard 17025:2005. It is the policy of EMLab P&K, LLC to comply with acceptable quality assurance and quality control guidelines for laboratories, such as those required by our accrediting bodies, as well as state specific requirements where applicable (i.e. for CA-ELAP, TCEQ, etc.).

2.1.2. The primary goal of the Quality Assurance program at the laboratory is to provide EMLab P&K, LLC's clients with the highest quality services. The objective of the laboratory is best summarized in the Mission Statement: When IAQ professionals ask, "Who is the best industrial indoor air quality lab in the nation?" the answer should be "EMLab P&K, LLC". In pursuit of this goal, we strive to be an effective, motivated team that:

- Is recognized as the industry leader and reference in analytical expertise, quality, service and integrity
- Provides clients with unmatched value and absolute confidence
- Faithfully represents the interests of employees, clients and the public

2.1.3. Test results must be reported accurately, clearly, unambiguously and objectively in accordance with the test method and the requirements of the client.

2.1.4. The objective of the EMLab P&K, LLC Quality Manual is to detail the policies and criteria of the management systems required to establish and maintain the highest possible standards of performance when analyzing samples. The laboratory maintains documentation and performs annual internal audits to guarantee the management systems are functioning according to specifications. The management systems meet the requirements of our accreditation agencies.

2.1.5. All personnel are informed of the quality goals of the laboratory and receive documented training in the required quality control systems.

2.1.6. All personnel are required to familiarize themselves with the quality policies and procedures that directly influence their work. All work should be carried out in accordance with stated methods and the requirements of clients.

2.1.7. All personnel are allowed direct access to senior management for any quality, safety or ethical question or concern.

2.1.8. All personnel have authorization to stop work where deemed necessary by quality and analytical requirements.

2.1.9. EMLab P&K, LLC will provide a workplace that is free from any commercial, financial or other pressures which might adversely affect the quality of the employees' work. If personnel feel undue pressure that might diminish confidence in operational integrity, then the management team should be notified.

2.2 Quality Management System Policy Statement

2.2.1. The management of TestAmerica and EMLab P&K, LLC is committed to good professional practice, providing data of known quality to its clients by adhering to approved methodologies, regulatory requirements and the QA/QC protocols described in this manual.

2.2.2. In all aspects of the laboratory and business operations, management is dedicated to maintaining the highest ethical standards. Training on ethical and

legal responsibilities is provided annually and each employee signs off annually on the policy as a condition of employment.

2.2.3. It is EMLab P&K, LLC's policy to continually improve systems and provide support to quality improvement efforts in laboratory, administrative and managerial activities. The Company recognizes that the implementation of a quality assurance program requires management's commitment and support as well as the involvement of the entire staff. (ISO/IEC 17025:2005, 4.2.3)

2.2.4. EMLab P&K, LLC strives to provide clients with the highest level of professionalism and the best service practices in the industry.

2.2.5. Every staff member at EMLab P&K, LLC's facilities plays an integral part in quality assurance and is held responsible and accountable for the quality of their work. It is, therefore, required that all laboratory personnel be trained and agree to comply with applicable procedures and requirements established by this document. All personnel concerned with testing activities within the laboratory must familiarize themselves with the quality documentation and implement the policies and procedures in their work. (ISO/IEC 17025:2005, 4.1.5.k, 4.2.2.d, 4.2.4)

2.3 Quality Management System Policies

2.3.1. Laboratory records will include documentation in sufficient detail to reconstruct all significant events associated with all analyses. Documentation is to include original observations including raw data, technical records, computer data and test reports that contain sufficient information to establish an audit trail and identify possible factors affecting the uncertainty of the test results. All data entry devices and computer functions used to expedite data entry shall be used according to Company policy to ensure that data entered is an accurate reflection of actual measurements.

2.3.2. All newly hired personnel receive documented training in the performance of specific sample Log-in, sample preparation, analysis, and reporting tasks as necessary for their job descriptions. All newly hired personnel must also receive training in the Corporate Ethics Policy (CA-L-P-004) as well as yearly (at minimum) refresher training thereafter. All employees actively participate in the Company's Safety Program.

2.3.3. The primary focal point of the EMLab P&K, LLC Quality Assurance Program is on systems and/or processes. Systems and processes are developed by analyzing the procedure and assessing the quality control procedures best suited to produce results that "meet the defined standard of quality." It is the responsibility of the laboratory employees to adhere to the guidelines prescribed in the system procedural documentation. The goal is to set a defined set of standards and maintain quality "within a stated level of confidence". The Quality Assurance Program is designed to reduce the number of errors generated. The laboratory personnel must be conscious of the need to support their conclusions if called upon to do so. Therefore, it is the objective of the quality assurance plan to ensure that the data produced are of the highest quality and can be supported by documented evidence.

2.3.4. The results of internal audits, and all other quality issues, are shared with the laboratory staff. If any employee believes that the Quality Assurance Department is not adhering to any of the objectives and/or policies described in this document, then the laboratory management must be notified.

2.3.5. No one understands the operation of a particular task better than the person performing the task. It will be the responsibility of each individual performing a task to give feedback to their Supervisor and/or their Quality Assurance Manager regarding ways that processes can be improved to ensure or, ideally, improve quality. If an individual believes that the inherent quality in a process can be improved, then the Quality Assurance Manager should be alerted to determine if it is feasible to implement a quality control step.

2.3.6. It is a policy of the Quality Assurance Department to develop an open atmosphere of mutual give and take on quality issues with the laboratory staff. If any member of the laboratory has any concerns regarding quality issues then they should feel comfortable discussing them with the Quality Assurance Department.

2.3.7. The Quality Assurance team annually coordinates a review of the management system with laboratory management. The purpose of the review of management systems is to ensure their effectiveness and introduce necessary changes or improvements. The review will assist in determining that an established management system is operating in a manner that potential vulnerabilities or errors may be detected, prevented, and resolved.

2.4 Ethics and Integrity Program

2.4.1. EMLab P&K, LLC is committed to ensuring the integrity of its data and meeting the quality needs of its clients. The elements of EMLab P&K, LLC's Ethics and Data Integrity Program include:

- **a.** An Ethics Policy (Corporate Policy No. CW-L-P-004) and Employee Ethics Statements.
  - **i.** Policies regarding Individual Conduct with regard to Data Integrity, Conflicts of Interest, and Gifts and Gratuities.
- **b.** Corporate Ethics and Compliance Officers (ECOs).
- **c.** An internal Training Program.
- **d.** Self-governance through disciplinary action for violations.
- **e.** A Confidential mechanism for anonymously reporting alleged misconduct and a means for conducting internal investigations of all alleged misconduct. (Corporate SOP No. CW-L-P-004.)
- **f.** Procedures and guidance for recalling data if necessary (Corporate SOP No. CW-L-S-002).
- **g.** Effective external and internal monitoring system that includes procedures for internal audits.
- **h.** Produce results, which are accurate and include QA/QC information that meets clients' pre-defined Data Quality Objectives (DQOs).
- **i.** Present services in a confidential, honest and forthright manner.
- **j.** Provide employees with guidelines and an understanding of the Ethical and Quality Standards of our Industry.
- **k.** Operate our facilities in a manner that protects the environment and the health and safety of employees and the public.
- **l.** Obey all pertinent federal, state and local laws and regulations and encourage other members of our industry to do the same.
- **m.** Educate clients as to the extent and kinds of services available.
- **n.** Assert competency only for work for which adequate personnel and equipment are available and for which adequate preparation has been made.

o. Promote the status of environmental laboratories, their employees, and the value of services rendered by them.

3.0 PERSONNEL RESPONSIBILITIES AND QUALIFICATIONS

Records for the qualifications, education, experience and training for relevant personnel are in the Laboratory Personnel folders kept regionally by the Quality Assurance Manager. Training records for personnel, along with authorization dates for performing the various analysis types, are stored electronically and maintained by the Quality Assurance department. Complete and current job descriptions are maintained by the Human Resource Department.

3.1 Regional Director

3.1.1. Job Summary

The Regional Directors are responsible for overseeing the analytical operations of the EMLab P&K, LLC laboratories in their region. EMLab P&K, LLC's laboratories are grouped by geographical regions (see cover page). These positions represent the analytical departments in corporate planning and implementation of policies. This includes assuring the quality of all processes through training and placement of departmental personnel in key roles and coordination of department activities with other corporate departments and assuring the smooth flow of work on a daily basis. The Regional Director directly or indirectly manages their client service personnel who are the contacts for clients regarding analytical services and advice. The Regional Director will work closely with the General Manager in monitoring, reviewing and directing laboratory personnel through the individual Regional Managers and Supervisors. The Regional Directors are also responsible for implementing the safety policies for their facilities.

Specific Job Responsibilities

a. Overall responsibility for the operation of the analytical laboratories in their region
b. Coordinates and supervises all activities related to EMLab P&K, LLC analytical processes
c. Implements any Corrective Actions in the laboratory regarding analytical procedures or processes
d. Represents analytical services in corporate planning and vision
e. Develops new and alternate analytical services
f. Oversees training programs
g. Performs periodic reviews of their direct staff and oversees evaluation of analyst and/or laboratory technician performance and provides written feedback regarding performance
h. Reviews analytical methods on an biennial basis
i. Ensures that the EHS program is enforced and the EHS Manual is implemented in the facilities under their control (ref. EHSM Section 2.4).
j. Responsible for training and support issues in region
k. Responsible for ensuring adherence to written SOPs and company policies
l. Can act as the AIHA Technical Manager or NVLAP Approval Signatory if approved by respective regulatory agency.

3.1.2. Departmental Relations

a. Reports directly to the General Manager.

b. Works directly with the Quality Assurance Manager to ensure accuracy and precision of all analytical results
c. Works with managers to coordinate implementation of corporate policies
d. Works with departmental staff to implement departmental policies

3.1.3. Qualifications (Minimum)

a. An earned life science degree, minimally at the baccalaureate level and a minimum of two years of full time equivalent documented relevant environmental microbiological work experience (mycological and/or bacteriological) and/or an earned physical or biological science degree, minimally at the baccalaureate level.
b. The individual must be familiar with indoor air quality, bacteriological sampling and analytical methodology.

3.2 Quality Assurance Manager

3.2.1. Job Summary

The Quality Assurance Managers are responsible for establishing and maintaining the integrity of the EMLab P&K, LLC Quality Assurance program. The Quality Assurance Managers work with all other management and supervisory staff to research and maintain all required accreditations and certifications and to provide leadership to analytical and support staff. The Quality Assurance Managers are responsible for disseminating the information contained in the Quality Assurance Manual to all laboratory employees. The Quality Assurance Managers are responsible for keeping current on all issues regarding quality control procedures and literature. Quality Assurance Managers may act as signatory for technical documents and quality assurance programs.

3.2.2. Specific Job Responsibilities

a. Implements and oversees the EMLab P&K, LLC Quality Assurance program for the main laboratories and satellite laboratories (microlabs).
b. Maintains and updates the Quality Assurance Manual.
c. Maintains all quality control statistical data and other quality control documentation.
d. Annually audits the Quality Assurance program, reporting procedures, and other documentation at each laboratory in their region.
e. Serves as the AIHA-LAP, LLC Quality Assurance Manager.
f. Works with supervisors to review, develop, and implement appropriate QA steps throughout process flow to ensure high quality of work and reasonable documentation.
g. Assesses and implements requirements for current ISO 17025, AIHA EMLAP, IHLAP and NVLAP accreditation, along with any other accreditations, such as state specific accreditations/certifications (i.e. CA-ELAP, NY-ELAP, etc.).
h. Responsible for ensuring that the laboratory is compliant to the current ISO 17025 standard, the AIHA-LAP, LLC, the NVLAP accreditation policies, and additional accreditations as they apply.
i. Produces the monthly quality assurance report
j. Responsible for training in Quality Assurance department.
k. Maintains and controls all Quality Assurance documents and records.
l. Researches and obtains new accreditations/licensing as required.
m. Maintains regional facility accreditations/licensing and proficiency testing programs.

3.2.3. Departmental Relations

- **a.** Has a dual reporting relationship with the Regional Director and Corporate Quality Assurance.
- **b.** Works with managers and supervisors to implement QA policies
- **c.** QA representative at company meetings
- **d.** Coordinates with supervisors and Regional Director to develop QA procedures
- **e.** Works with laboratory personnel to develop an open atmosphere regarding quality control issues

3.2.4. Qualifications (Minimum)

- **i.** A baccalaureate degree in an applicable basic or applied science and have at least one year of non-academic analytical experience.
- **ii.** Quality Assurance Manager shall have documented training in statistics or laboratory quality assurance/quality control.
- **iii.** Experience with applicable QA\QC procedures

3.3 Regional Manager

3.3.1. Job Summary

The Regional Manager is responsible for overseeing the analytical operations of one or more of the different EMLab P&K, LLC main laboratories and satellite laboratories (microlabs). They are also responsible for the coordination of department activities with other corporate departments and assuring the smooth flow of work on a daily basis. The Regional Manager will work closely with the Regional Director in monitoring, reviewing and directing laboratory work and analytical quality.

3.3.2. Specific Job Responsibilities

- **a.** Overall responsibility for the operation of the analytical laboratory
- **b.** Coordinates and supervises all activities related to EMLab P&K, LLC analytical processes
- **c.** Implements any Corrective Actions in the laboratory regarding analytical procedures or processes.
- **d.** Oversees training programs, if applicable
- **e.** Reviews analytical methods on an annual basis and keeps track of current revisions to procedures to ensure the laboratory is compliant with the current operating protocols
- **f.** Responsible for ensuring that the laboratory is compliant to the ISO 17025 standard, the AIHA-LAP, LLC accreditation policies, and the NVLAP accreditation policies, and additional accreditations as they apply.
- **g.** Can act as the AIHA Technical Manager or NVLAP Approval Signatory if approved by respective regulatory agency.

3.3.3. Departmental Relations

- **a.** Reports directly to the Regional Director.
- **b.** Works directly with the Quality Assurance Manager to ensure accuracy and precision of all analytical results.
- **c.** Works with managers to coordinate implementation of corporate policies.
- **d.** Works with departmental staff to implement departmental policies.

3.3.4. Qualifications (Minimum)

- **a.** An earned life science degree, minimally at the baccalaureate level and a minimum of two years of full time equivalent documented relevant environmental microbiological work experience (mycological and/or

bacteriological) and/or an earned physical or biological science degree, minimally at the baccalaureate level.

b. The individual must be familiar with indoor air quality, bacteriological sampling and analytical methodology.

3.4 Senior Systems Analysts

3.4.1. Job Summary

The Laboratory Information Management Systems Manager is responsible for the development and implementation of the laboratory data information system. Overall responsibility for the operation of the database system, including day to day operations and validation of software functioning. Works with the Computer Systems Operation Manager to ensure that the laboratory has the proper hardware for the maintenance of laboratory information and data.

3.4.2. Specific Job Responsibilities

a. Develops the EMLab P&K, LLC information system and database so that it meets the needs of the laboratory personnel and clients

b. Maintains the information system at an acceptable level of performance

c. Provides support service for laboratory personnel regarding database issues

d. Trains personnel on the operation and maintenance of the EMLab P&K, LLC database system

e. Develops and maintains the security and integrity of the database

f. Develops a written manual on the operation of the database system

g. Responsible for training and support issues in department

3.4.3. Departmental Relations

a. Reports directly to the Special Projects/Products and Services Manager

b. Works with managers and supervisors to implement and maintain the database

c. Coordinates with the QA Manager to ensure that the database meets accreditation requirements

d. Works with laboratory personnel to train and answer questions regarding the operation of the database

3.4.4. Qualifications

a. Should have a baccalaureate degree in Computer Science and/or applicable computer experience.

b. Laboratory or science experience preferred

3.5 Project Manager

3.5.1. Job Summary

Project Managers are a liaison between the laboratories clients and the laboratory staff. Project Managers are responsible for all client communication and maintaining client satisfaction. They should be knowledgeable, responsive, and proactive in communicating with non-conformities on any level for all non-conformity service needs.

3.5.2. Specific Job Responsibilities

a. Manages and provides a timely response to client inquires and complaints related to the management of projects and status of work in progress.

b. Ensures resolution of the issues or complaints in the timeframe expected by the client.

c. Works with Sales Team Members, Laboratory Support, and Operations staffs to meet client requirements and resolve service and technical issues during every phase of the project.
d. As part of project setup, defines project requirements to ensure all contract requirements are met and communicates these requirements to appropriate personnel. The PM may be responsible for facilitating kick-off meetings, as appropriate, for new projects and ongoing projects.
e. Responsible for oversight of the supply order process whether completed personally or delegated to other appropriate personnel, such as Lab Support or a member of the EMLab P&K, LLC Products Department. Ensures that orders are completed accurately and submitted in a timely manner.
f. Works closely with internal sample receiving personnel to ensure proper receipt and login of samples. Verifies receipt and login information as quickly as possible and always within 24 hours from receipt of samples to ensure accuracy and completeness. Verification of login information includes all information required to accurately bill client for services and ensure ultimate collection of invoices.
g. Prioritizes client requests based on due dates and complexity of response required.
h. Manages task orders, projects, reports work orders, change orders, and contracts for existing work.
i. Develops business relationships with clients to further enhance client service and sales.
j. Participates in the overall sales process through direct discussions with clients and in coordination with the Sales Team. Ensures client setup is completed including appropriate terms and credit limits. Facilitates internal and client discussions as needed to eliminate issues after samples are received as they relate to terms and credit status.
k. Works with the Regional Director and the Sales Team in order to support the tracking and determination of wins/losses or pending for bids and quotes.
l. Responsible for the generation and review of Client Delivery Preferences whether completed personally or delegated to Project Management Assistants or a Report Generation Group. Reviews and ensures that the Client Delivery Preferences meet the client's requirements and the EMLab P&K, LLC standard for completeness, accuracy, and overall quality.
m. Develops the ability to prepare and/or approve invoices to clients.
n. Develops the ability to perform proactive collection related tasks in relation to status of client accounts receivables. This can range from ensuring receipt and approval of invoices by client to resolving issues related to unpaid invoices.

3.5.3. Departmental Relations

a. Reports directly to the Regional Directors, Regional Managers or Client Service Managers.
b. Works with the Regional Directors, Regional Managers and Sales/Marketing Director to support generation of sales, manage client service, and resolve client and lab operations issues.
c. Works with the Quality Assurance Managers to ensure compliance with our QAM.

d. Works with Lean Manager to ensure continuous improvement in all areas of operations.
e. Works with Corporate Finance and the Sales Department to facilitate appropriate client setup including terms and credit limits.
f. Works with other Products and Services General Managers to promote cross selling

3.5.4. Qualifications (Minimum)

a. Bachelors' degree in microbiology, biology or related science degree or combination of appropriate education/experience
b. General computer skills Microsoft Windows Operating Systems and Microsoft Office software abilities (i.e. Outlook, Word, Excel)
c. Strong interpersonal, communication and problem-solving skills.
d. Effective time management and organizational skills as demonstrated by successful and timely completion of projects.
e. Leadership skills.
f. Ability to establish rapport with others and interface with a helpful, professional demeanor.
g. Ability to successfully handle multiple tasks.
h. Ability to maintain organized files, prioritize assignments, and maintains a steady workflow.

3.6 Senior Analyst

3.6.1. Job Summary

Senior analysts may oversee other departmental analyses, such as mycology and/or bacteriology. Senior Analysts will provide leadership to analytical and support staff. A Senior Analyst is responsible for providing high quality analyses and excellent client service. Senior analysts may also oversee asbestos, allergen and other analytical testing done in the laboratory.

3.6.2. Specific Job Responsibilities

a. May supervise and coordinate laboratory work flow and analyses
b. Performs analysis
c. May train new analysts
d. Maintains client relations and technical support when applicable
e. Assists in research and development of new analytical services as required
f. Assists the QA manager in development, implementation and data collection of QA processes for analytical services
g. Performs independent data reviews for other analyst's work

3.6.3. Departmental Relations

a. Reports to the Regional Director or Regional Manager.
b. Implements and performs mycological, bacteriological, asbestos and other analytical training as required by the Regional Director
c. Supports other Supervisors, Regional Managers or Regional Directors when necessary
d. Can act as the AIHA Technical Manager or NVLAP Approval Signatory if approved by respective regulatory agency.

3.6.4. Qualifications (Minimum)

a. Environmental Microbiology Laboratory Program (Fungi and Bacteria)
i. An earned science degree, minimally at the baccalaureate level and a minimum of three years of full time equivalent documented environmental microbiological work experience (mycological and/or bacteriological).

b. Industrial Hygiene Laboratory Accreditation Program (PCM Asbestos)
- **i.** An earned physical or biological science degree, minimally at the baccalaureate level and a minimum of three years relevant nonacademic analytical chemistry experience. A minimum of two years experience must be in asbestos analyses. The remaining one year can be substituted for work experience.
- **ii.** Completion of NIOSH 582 (or equivalent) training course for PCM analyses.

c. National Voluntary Accreditation Program Institute (PLM Asbestos)
Understand polarized light microscopy and its application to crystalline materials sufficiently to conduct analyses. That they understand what the various optical properties are, how they are measured or observed in the microscope, and how the data are used to form a conclusion about the identity of the component, (e.g., an analyst using central and/or annular focal screening (dispersion staining) to measure refractive index must be able to explain what produces the observed color and how that color is used to determine refractive index) Analysts are competent with the polarized light microscope, Can properly align the microscope and identify all of the crucial parts.
- **i.** Completion of McCrone (or equivalent) training course for PLM analyses if deemed necessary.

3.7 Analyst

3.7.1. Job Summary

Analysts perform a range of analyses based upon specific area of responsibility, including but not limited to, aerobiological, environmental, asbestos and drinking water samples. Analysts are responsible for high quality analyses and excellent client service.

3.7.2. Specific Job Responsibilities May Include

a. Analyzes samples for fungal and/or bacterial parameters
b. Identify macrofungi and microfungi
c. Analyzes samples for bacterial parameters, including drinking waters for coliforms and *E. coli*
d. Process and prepare samples for analysis
e. Analyze samples for asbestos
f. Analyze samples for allergens
g. Accurately records and reports analytical data
h. Performs specific tasks related to Quality Control
i. Maintains analytical quality control records
j. Performs regular analysis of reference materials and other quality control samples
k. Performs independent data reviews for other analysts' work

3.7.3. Departmental Relations

a. Reports to Regional Director, Regional Manager, or Facility Manager.
b. Works with management and support staff for optimal teamwork
c. Works with project management staff to clarify technical matters.
d. Can act as the AIHA Technical Manager and NVLAP Approved Signatory if approved by respective regulatory agency

3.7.4. Qualifications (Minimum)

a. Environmental Microbiology Laboratory Program (Fungi and Bacteria)

i. A bachelor's degree in physical or biological science and six months of documented on-the-job training as an analyst trainee under the supervision of a Senior Analyst. For fungal air direct exam (spore trap), analysts are required to undergo three months of documented on-the-job training as a spore trap analyst trainee under the supervision of a Senior Analyst.

b. Industrial Hygiene Laboratory Accreditation Program (Asbestos)

i. A bachelor's degree in a physical or biological science, and a minimum of one year relevant nonacademic analytical chemistry experience.

ii. Completion of training courses for PCM analyses.

c. National Voluntary Accreditation Program Institute (PLM Asbestos)

Understand polarized light microscopy and its application to crystalline materials sufficiently to conduct analyses. That they understand what the various optical properties are, how they are measured or observed in the microscope, and how the data are used to form a conclusion about the identity of the component, (e.g., an analyst using central and/or annular focal screening (dispersion staining) to measure refractive index must be able to explain what produces the observed color and how that color is used to determine refractive index). Analysts are competent with the polarized light microscope, Can properly align the microscope and identify all of the crucial parts.

i. Completion of McCrone (or equivalent) training course for PLM analyses if deemed necessary.

3.8 Laboratory Technician/Assistant

3.8.1. Job Summary

Laboratory technicians and assistants prepare bioaerosol and microbial samples for fungal and bacteriological analysis. Receive samples and complete required paperwork for processing and analysis of samples, where applicable.

3.8.2. Specific Job Responsibilities May Include

a. Prepares bioaerosol and microbial samples for fungal and bacterial analysis
b. Cultures fungi and bacteria from environmental samples for analysis
c. Works with a variety of sampling media for optimal results
d. Analyzes samples for fungal parameters
e. Identify macrofungi and microfungi
f. Analyzes samples for bacterial parameters, including drinking waters for coliforms and *E. coli*
g. Analyze water samples for analysis
h. Analyze samples for asbestos
i. Analyze samples for allergens
j. Accurately enters and reports analytical data
k. Performs specific tasks related to Quality Control
l. Performs required Quality Control procedures
m. Maintenance of laboratory supplies, equipment, and routine lab reagents
n. Prepare samples for ELISA analysis and perform ELISA analysis

3.8.3. Departmental Relations

a. Reports to Regional Manager, Regional Director or Facility manager
b. Work with analysts to complete samples by required deadlines
c. Work with log-in and receiving supervisors to control flow of work through the laboratory.
d. Can act as the NVLAP Approval Signatory if approved by respective regulatory agency.

3.8.4. Qualifications (Minimum)

a. Environmental Microbiology Laboratory Program (Fungi and Bacteria)

i. A high school diploma or GED and one year of documented on-the-job training as an analyst trainee under the supervision of a Senior Analyst. For fungal air direct exam (spore trap), analysts are required to undergo six months of documented on-the-job training as a spore trap analyst trainee under the supervision of a Senior Analyst

b. National Voluntary Accreditation Program Institute (PLM Asbestos)

Understand polarized light microscopy and its application to crystalline materials sufficiently to conduct analyses. That they understand what the various optical properties are, how they are measured or observed in the microscope, and how the data are used to form a conclusion about the identity of the component, (e.g., an analyst using central and/or annular focal screening (dispersion staining) to measure refractive index must be able to explain what produces the observed color and how that color is used to determine refractive index); OK b) analysts are competent with the polarized light microscope, Can properly align the microscope and identify all of the crucial parts.

i. Completion of McCrone (or equivalent) training course for PLM analyses if deemed necessary.

3.9 EMLAP Technical Manager Qualifications (Not an Internal Position)

i. An earned science degree, minimally at the baccalaureate level, with a minimum of three years relevant laboratory experience, two years of which must be full time equivalent documented environmental microbiological work experience (mycological and/or bacteriological).

ii. The individual must be experienced in the selection and use of bioaerosol, surface, fluid and raw material sampling methods and in sample processing for the quantification and identification of mesophilic and thermophilic bacteria, and mesophilic, xerophilic, hydrophilic and thermotolerant fungi (molds and yeasts) isolated by those methods.

iii. The individual must be present on-site at least 20 hours per week, or 50% of the laboratory working hours (whichever is greater) to address technical issues for laboratory staff and clients.

3.10 IHLAP Technical Manager Qualifications (Not an Internal Position)

i. An earned physical or biological science and a minimum of three years relevant nonacademic analytical chemistry experience. A minimum of two years experience must be in asbestos analyses. The remaining one year can be substituted for work experience.

4.0 INSTRUMENTS, EQUIPMENT AND REAGENTS

4.1 Purchasing and Procurement of Laboratory Instruments, Equipment and Reagents

(TestAmerica Procurement and Contracts Policy (CW-F-P-004) and purchasing procedures (CW-F-S-008, 013, CW-WI-027) , Supply Receiving and Distribution East (Document EM-MR-S-1209) and Supply Receiving and Distribution West (Document EM-MR-S-7350)

4.1.1. All vendors for media, reagents and all quality-critical services and supplies must be evaluated. Vendors of consumable media shall have an established Quality Control program for their products. Approved vendors are stored in JDE. The Certification of Analysis and other Quality Control records for specific medium and reagent lots supplied by the vendors are maintained at each facility.

All reagents and media received by the laboratory for internal use must be dated and initialed upon receipt, and assigned an expiration date if one is not assigned by the manufacturer. All items are to be stored according to manufacturer's instructions and SDS (MSDS) requirements. All Certificates of Analysis and SDSs (MSDSs) are to be kept on file.

4.1.2. Any media or reagents generated by the laboratory must follow the prescribed procedure for quality control checking prior to use in analysis.

4.2 Equipment Authorization

Equipment is purchased according to the required specifications for the analysis of samples. Only personnel that are trained on the use of equipment required in a procedure are authorized to operate that equipment. The required training for the use of procedure specific equipment is included in the training for the task. Documentation for equipment training is kept with the procedure training forms.

4.3 Equipment Calibration, Verification, Maintenance and Control (Documents EM-EQ-S-1584, EM-EQ-S-1586, EM-EQ-S-1588, EM-AS-S-1260, EM-AS-S-1267, EM-EQ-S-1198)

4.3.1. All laboratory equipment receives routine maintenance and associated records are maintained as part of the Quality System documentation. Service records are kept on file for any equipment that has gone out of service and requires repair. All training records for specific equipment are kept with the individual training records for the analyst or technician performing the related procedures.

4.3.2. Equipment used in the laboratory are checked for proper functioning and calibrated or verified, where applicable, prior to being put into service.

a. Where possible, equipment and instruments are protected from adjustments.

4.3.3. Operating Manuals for equipment used in the processing of samples are kept on file.

4.3.4. All calibrations/verifications are documented as part of the quality system and the records are kept on file. Satellite labs and regional labs may have a binder, (referred to as the “QA Binder”) for all of the QC data.

4.3.5. Equipment such as balances, pipettes, weights, and thermometers will be calibrated and verified according to the schedule outlined in Document EM-EQ-S-1584 "Calibration and Maintenance of Lab Equipment". Records of these verifications and/or calibrations are maintained as part of the Quality System documentation.

4.3.6. Incubators and refrigerators -Temperatures are recorded with verified thermometers, twice daily on business days, with a minimum 4 hours between readings for days in use.

4.3.7. The routine maintenance of microscopes is outlined in Document EM-EQ-S-1586 "Routine Maintenance of Microscopes".

a. Microscope Ocular Micrometers are calibrated annually with an NIST traceable micrometer per Document EM-EQ-S-1588 "Ocular Micrometer Calibration".

b. Records of the maintenance and ocular micrometer calibrations are maintained as part of the Quality System documentation.

4.3.8. For those microscopes used in PCM analysis, routine maintenance and alignment requirements are outlined with the analytical Document EM-AS-S-1260 "PCM Analysis for Asbestos and Other Fibers".

4.3.9. For those microscopes used in Asbestos PLM analysis, routine maintenance and alignment requirements are outlined with the analytical Document EM-AS-

S-1267 "Sample Preparation and Analysis for Asbestos Fibers by Polarized Light Microscopy (PLM)".

4.3.10. Autoclave use and maintenance requirements are outlined in Document EM-EQ-S-1198,"Autoclave Operation and Maintenance".

4.3.11. All associated maintenance and verification records are maintained as part of the Quality System documentation.

4.4 Equipment Out of Service (Document EM-EQ-S-1584)

4.4.1. Where equipment is damaged or fails to meet acceptable standards outlined in Document EM-EQ-S-1584 "Calibration and Maintenance of Lab Equipment". either during scheduled verifications and/or calibrations or during the course of routine work, the equipment will be removed from use and labeled accordingly (i.e. “out of service"). A QAzilla bug will be entered to address the equipment failure and evaluate the impact on associated sample analyses.

4.4.2. Any equipment that goes out of direct control of the laboratory or has been repaired will be checked upon return or repair for proper functioning ability. At a minimum this will include re-calibration to ensure that the equipment is functioning properly.

4.5 Preparation of Standards and Reagents

4.5.1. In-house generated standards or reagents must complete quality control checks, before being used in the processing of samples. All standards and reagents produced by the laboratory are produced with a description of content, preparer’s initials, manufacturer and lot number of parent material, pH (if applicable), assigned lot numbers and expiration dates.

4.5.2. All standards used to calibrate instruments or measuring devices must be traceable to the NIST, or equivalent national or international standard.

4.6 Maintaining Fungal and Bacterial Culture (Document EM-AD-S-5745)

4.6.1. Cultures for quality control testing of media and for use as reference organisms are stored appropriately based on procedural requirements.

4.7 Routine Checking of Culture Media

4.7.1. Laboratory produced media and reagents are checked against quality control organisms, where applicable, and for sterility according to media type recipes/instructions prior to use in analytical procedures. Documentation for the quality control of media and reagents are kept on file. Quality Control records for media produced by outside vendors are kept on file.

4.8 Ventilation and Decontamination (Document EM-EQ-S-1584)

4.8.1. Class II Biosafety hoods are certified on a semi-annual basis by a NSF accredited field certifier to ensure that the hoods are functioning according to the specifications outlined in NSF Standard 49 and the Chapter 13 of the ASHRAE Applications Notebook (1999). If hood is equipped with flow rate alarm, the certification may be performed annually. The records for the hood calibration are maintained at each facility.

4.8.2. All other Biohazard hoods, including Class I with HEPA filter used for asbestos, are certified on a semi-annual basis by an ISO 17025 accredited vendor.

4.8.3. Hoods used for asbestos analyses must operate at a minimum 75 fpm or they shall not be used for asbestos work.

4.9 Glassware Cleaning and Decontamination (Document EM-EQ-S-5810)

4.9.1. All glassware and plasticware that is used in the analysis of samples must be cleaned, and where appropriate sterilized according to Document EM-EQ-S-5810 "Glassware Cleaning".

4.9.2. All glassware shall be inspected for cracks and chips before each time it is used. If cracks or chips are found, the glassware shall not be used and shall be repaired or discarded.

5.0 STANDARD OPERATING PROCEDURES

5.1 Sampling Materials and Procedures:

5.1.1. EMLab P&K, LLC does not offer sampling services. Rare exceptions have been made upon high profile client request. Such requests are to include client specified sampling plans and are reviewed and approved on a case by case basis by the Regional General Manager and Regional Director. Such requests and dictated protocols are documented as part of the client account records. Clients of the laboratory are supplied, upon request, with EMLab P&K, LLC Chain of Custody (COC) forms, and written information regarding the use of sampling devices and sampling procedures. Clients may also obtain these materials and a detailed list of sampling procedures from the EMLab P&K, LLC internet site.

5.2 Sample Integrity Policy (Document EM-SM-S-1288)

5.2.1. The integrity of all samples received is checked during the Sample Receipt process outlined in Document EM-SM-S-1288 "Sample Receipt" prior to sample Log-in. It is the duty of the individual receiving the samples to ensure that the samples received are intact and not compromised in any fashion. The sample acceptance policy to be used as a guideline for assessing the integrity of received samples is contained within Document EM-SM-S-1288 "Sample Receiving".

5.2.2. Whenever a compromised sample is encountered, the information is documented in Labserve (Report Comments, Project Log, Project Tasks, Login Field or Account Details). The client must be contacted and at the very least, if possible, a message left to inform the client of the situation. If, at the client's request, a compromised sample is analyzed, a qualifying statement must be submitted with the written report describing that the integrity of the results are potentially compromised and that the interpretation of the data is left to the client. Clients are informed on the condition of the sample in the final report. A record of pertinent discussions with clients must be maintained in LabServe (for example in the account details, project logs, tasks, etc.).

5.3 Sample Receipt Policy (Document EM-SM-S-1288)

5.3.1. All samples submitted must have a Chain of Custody (COC), or an equivalent sample request, to be received by the laboratory. Whenever a sample request is submitted to the laboratory without a written COC, the client will be contacted to obtain the required information to login samples on an internal Chain of Custody.

5.3.2. Samples are checked for unique identifiers on each sample and that the identifier matches the information on the COC. The receiving laboratory staff signs and dates all received COCs.

5.3.3. The receiving staff separates the individual analysis types into bins and makes copies of the original COC for each bin as needed.

5.3.4. The types of analyses, the number of samples received for each analysis, the type of sample and the requested turn around time are recorded into the database. Any missing or extra samples received are recorded on the original COC and into the database.

5.3.5. If any of the previous information is missing or incomplete, the information is documented into the database and the client is contacted.

5.3.6. Projects are logged into the database, and assigned an EMLab P&K, LLC Project Number and unique laboratory identifiers for each sample in the project.

5.3.7. Samples are categorized by projects and analysis types into individual bins and queued for the Log-in process.

5.3.8. The laboratory maintains a sample storage area that protects the samples from deterioration, loss, damage or from unauthorized access

5.4 Sample Log-in Procedure-In-house (SOP EM-SM-S-1993)

5.4.1. All client information, project information, analysis requests, sample identifier information, sample descriptions and miscellaneous notes are entered into the database. The information logged into the database is checked against the information on the original COC and Project Log before the samples are sent to a Receiving and Log- in Quality Control check.

5.4.2. Client contact is required when there are any significant discrepancies between the COC and samples received, sample condition is poor or unacceptable, service selections do not coincide with sample type submitted, etc. A record of discussions with clients must be maintained in LabServe (for example in the account details, project logs, tasks, etc.).

5.5 Sample Log-in Procedure-Via the Internet (SOP EM-SM-S-1993)

5.5.1. In an effort to meet the needs of the client, EMLab P&K, LLC offers the client the ability to log samples in via the internet. Clients enter Chain of Custody (COC) information into the internet log-in screen and then print a COC form which is sent with the samples to the laboratory.

5.5.2. Upon receipt of the samples at the laboratory the COCs are signed by the receiving laboratory staff and the information logged in by the clients is compared with the samples received and the information on the printed client produced COC.

5.5.3. The types of analyses, the number of samples received for each analysis, the type of sample and the requested turn around time are recorded, confirmed, and the due date is entered into LabServe. If any of the information is missing or incomplete, the information is documented in LabServe (project logs, tasks, etc.) and the client is contacted. Client log-in information can be edited by the laboratory after the client has been contacted

5.5.4. Any missing or extra samples received are documented in LabServe (project logs, tasks, etc.) and the client is contacted. The COC may be revised after discussion with clients. Any added information to the COC must be documented with initials and date.

5.5.5. Client log-in information can be edited by the laboratory after the client has been contacted. The COC may be revised after discussion with clients. Any added information to the COC must be documented with initials and date. A record of pertinent discussions with clients must be maintained in LabServe (for example in the account details, project logs, tasks, etc.).

5.5.6. All project information logged into the computer can be accessed by laboratory personnel at any time while the samples are being processed through the laboratory.

5.6 Receiving and Log-in Quality Control Checking (Document EM-SM-S-1288 and EM-SM-S-1993)

5.6.1. The Receiving and Log-in Quality Control check is performed prior to formal/final submittal of the information to the LabServe. All editions or revisions to logged data after the Receiving and Log-in check will be documented in the LabServe in the Project Log or Task System.

a. The Receiving and Log-in checks include the following:

- Verify that the information on the COC reflects the information written on the received samples and what is logged into the database
- An EMLab P&K, LLC project identifier is attached to all samples
- Each bin has a copy of the original COC as needed.
- Samples are in the correct bins for processing and the bins are labeled correctly.
- COC forms are signed, and filled out correctly, and contain any additional information supplied by the client, and the additional information has been entered into the database.
- All sample information is transcribed correctly into the database.
- Turn around times are recorded in the database.
- Volume of air sampled is recorded correctly, if applicable.
- All project information and notes are entered.
- Sample analyses match COC information.
- Bins have been tagged properly for requested analyses.
- Bar coding information is correct.
- Log-in information is checked.

5.6.2. A Date, Time and Reviewer stamp is assigned by LabServe to the data after the review process.

5.6.3. After the Log-in and Receiving checks have been completed, the log-in and sample receiving data are released for processing of the samples by the laboratory.

5.7 Method Selection and Sample Preparation

5.7.1. Method Selection

a. Sample Preparation Methods are selected to adequately meet the testing requirements of the client. The matrix of the sample, the client requested turn around time (TAT), the cost to the client, and the relevance of the data generated to help provide high quality information for the clients to help in the determination of method selection.

5.7.2. Sample Preparation

a. Samples are prepared according to the Standard Operating Procedures for each analysis type. The sample preparation technician is responsible for ensuring that the samples are processed according to procedural protocols and that all project and sample information is transcribed accurately to the prepared samples.

b. Analysts are responsible for maintaining the audit trail of the samples. All information pertinent to the preparation must be recorded on internal forms or be recorded in the LabServe Data Entry Terminal Application, Labserve Project Logs and Task System accordingly.

5.8 Analytical Methods

5.8.1. Method Validation (Document EM-AD-S-3548)

a. Validation is performed per Document EM-AD-S-3548 for non-standard methods, laboratory-designed/developed methods, standard methods used outside their intended scope, and amplifications and modifications of standard methods to confirm that the methods are fit for the intended use.

b. Methods are validated continuously through inter and intra-analyst comparisons, duplicate analysis, daily reference slides, and routine quality control checks.

5.8.2. Sample Analysis

a. Samples are analyzed according to the Standard Operating Procedures for each analysis type. The analyst is responsible for ensuring that the samples are analyzed according to procedural protocols and that all project and sample information is transcribed accurately to the data sheets and/or the LabServe Data Entry Terminal Application, Labserve Project Logs and Task System accordingly.

5.8.3. Non-Standard Methods (Document EM-AD-S-1619)

a. At times, the laboratory may receive client requests to develop and/or perform non-standard or unique methods. A protocol must be followed when processing samples by non-standard methods. Information from the processing of non-standard analyses is recorded on a separate attachment or in a laboratory notebook. The documentation accounts for the following information:

i. Name of the method
ii. Scope of the analysis or method
iii. Description of the sample being tested
iv. The parameters being quantitatively or qualitatively analyzed
v. List of the equipment, materials and media being used in the procedure
vi. Methods published in peer reviewed journals are suitable for use as long as the reference is cited in the report

5.9 Technical Records (Document EM-QA-S-2059)

5.9.1. Observations, data and calculations must be recorded at the time they are made and must be identifiable to the specific task.

5.9.2. All data and information in the laboratory will be kept in such a manner as to document, in sufficient detail, all the significant events associated with all analyses. The documentation kept by the laboratory to maintain an audit trails includes, but is not limited to the following:

a. Contracts with clients to perform analyses, as applicable
b. Signed, dated, and receipt time recorded client Chain of Custody form
c. Project Logs, Tasks, and Lab Comments
d. All verbal client information supplied by the client and/or any other information pertinent to the processing of samples in the laboratory are recorded in the Project Log within the database

5.9.3. Single Strikeout Line Policy:

a. All corrections to handwritten data must be documented by a single strikeout line through the original data with the initials of the person performing the alteration and date of the operation being recorded next to the line. All handwritten records must be made in indelible ink. No pencils, corrective fluid or tapes shall be used on laboratory data records.

i. Significant corrections/changes made require a description of why the change was made.

b. For corrections/changes/deletions made in electronic systems, a project log, lab comment or task must be recorded to document the details and causes of the change/correction.

5.10 Validation of Software

5.10.1. Custom built software applications, as well as significantly modified off the shelf software, are validated for performing accurate mathematical calculations and transposition of non-numerical information. Whenever the computer software is edited or changed, the computation and transposition processes are revalidated using a computerized test suite in the potentially effected areas prior to the software being used to gather or report data. Data are checked for the following processes:

a. Data accuracy during data collection and storage

b. Data integrity and confidentiality during data storage

c. Integrity of data following electronic transmission to clients

5.10.2. All software validations and associated process checks are to be fully documented within the Bugzilla system. All supporting spreadsheets, documents, etc. are to be attached to the validation record within Bugzilla.

5.11 Detection Limits and Significant Figures

5.11.1. Detection and reporting limits for analyses are unique to the method being performed. Detection and reporting limits are defined within the respective analytical procedures, where applicable.

5.11.2. Due to the nature of biological data the number of significant figures that are used for interpretation should generally be one or two. Therefore data generated by the laboratory is reported with a maximum of two significant figures, unless the use of additional significant figures is warranted by specific analytical reporting requirements.

5.12 Data Review Procedure (Document EM-SM-S-1637)

5.12.1. Data results are predominantly made available to clients directly through electronic means. EMLab P&K, LLC additionally offers hard copy reporting by special client request only. Reports are made available in various formats/templates. Clients receive default or “standard” reporting formats/templates unless otherwise dictated by client preferences and type of data being reported.

5.12.2. Data is not reported until the analyst has completed the analysis of all required quality control analyses, unless a data qualifier is added to the report.

5.12.3. Data is not reported prior to technical report review. Any report released prior to completion of a replicate sample or review by a second qualified individual must have a data qualifier placed on the report.

5.12.4. The analysis report review process checks are outlined in Document EM-SM-S-1637, Quality Assurance Technical Report Review and Release Analysis Procedures.

5.13 Rejection of Results (Documents EM-QA-S-1994, EM-QA-S-1259, EM-QA-S-3553)

5.13.1. Processes or procedures that fail to pass a quality control step will initiate the Work Out of Specification, Continuous Improvement procedures and/or Quality Non-conformity per Document EM-QA-S-3553, Conducting Root Cause Investigations and Implementing Corrective Actions. When a Work Out of

Specification, Continuous Improvement or a Quality Non-conformity event is determined to have not affected the results, and can be rectified by the laboratory, then the sample will continue being processed by the laboratory, the required documentation will be completed and steps will be taken to correct the process that generated the error. If the Work Out of Specification, Continuous Improvement event or Quality Non-conformity cannot be rectified by the laboratory, or the steps involved in the process cannot be adequately traced, the processing of the sample will cease, and the client will be notified of the event. A record of discussion with clients must be maintained in the LabServe and data qualifiers must be included in the final report where applicable.

5.14 Corrections and Additions to Test Reports (Doc EM-SM-S-1638)

The laboratory has procedures in place for corrections and additions to test reports that have been sent to the client. The procedures include, but are not limited to the following:

5.14.1. Within a project task and/or QAZilla bug, a root cause investigation must be completed to document any changes to data following a report release to a client.

5.14.2. Should any data be changed, a new report will be automatically generated. This revised report is uniquely identified and reissued to the client.

5.14.3. Follow up with the client will be performed in order to communicate the result of the root cause investigation and resolve any remaining concerns.

6.0 CLIENT COMMUNICATION AND INTERACTION (Document EM-CS-S-1631)

6.1 Client Communications

6.1.1. Upon request, clients will be notified of the analysis procedures and processes used to analyze samples. If a client amends a contract or testing requirement, affected laboratory personnel will be contacted regarding the changes. Any updates to a project or additional client information must be included in the notes section of the database. The notes must contain the name of the laboratory contact and the date the information was received.

6.1.2. Whenever a client contacts the laboratory over the phone to discuss results of a project, the client must be recognized by the laboratory contact before the results of an analysis can be discussed.

6.1.3. The client shall be notified of any delays or deviations in the testing process.

6.1.4. All of the previously mentioned contacts with clients are noted in the project log

6.2 Contract Review (TA Procedure CA-L-P-002, Contract Compliance Policy, Documents EM-SM-S-1288 and EM-SM-S-1993)

6.2.1. All contracts, including amended contracts, are reviewed by EMLab P&K, LLC using the corporate policy “Contracts Compliance Policy CA-L-P-002” and Documents EM-SM-S-1288, Sample Receiving and EM-SM-S-1993, Sample Log In, to assess whether the requirements of EMLab P&K, LLC and the other contracting body are adequately defined and mutually understood, and whether both parties have the capability to fulfill contract requirements. The laboratory will inform the client if it is capable of performing the selected test methods. Clients are informed if the laboratory performs any work that deviates from the information supplied in the contract. All written or oral contacts with the client regarding contracts and amending contracts will be documented.

6.3 Resolving Client Concerns and Soliciting Client Feedback (Document EM-CS-S-1709)

6.3.1. EMLab P&K assesses both positive and negative client feedback via client surveys and communication. Client survey links are included with each email sent from LabServe to solicit feedback. Annual client survey summary reports are generated and shared with laboratory personnel.

6.3.2. Client concerns are documented via the task system and adhere to a procedural guideline for resolution (Document EM-CS-S-1709). Investigations are performed by the project managers, Regional Managers, Regional Directors, or any other employees deemed appropriate for feedback given the specific concern. Each concern is reviewed according to the Root Cause and Corrective Action SOP (Document EM-QA-S-3553).

6.3.3. Depending upon the nature of the problem, the aforementioned personnel researches the situation by reviewing the quote, raw data, Chain of Custody, method, regulations, etc., discusses the details with management. They evaluate the complaints and follow-up with the client for resolution. In addition, copies of the complaint with resolution are forwarded to Quality Assurance and are tracked on the monthly QA Metrics Report. The complaints, resolutions and QA metrics reports are analyzed as part of the management system review (Document CW-Q-S-004) to identify improvement opportunities for the management system, calibration activities and client service.

6.4 Policy on the Use of Subcontractors (Document **EM-SM-S-1288**)

6.4.1. All AIHA-LAP, LLC and NVLAP related subcontractors used by the laboratory will be held to equivalent Quality Assurance requirements as EMLab P&K, LLC. For analyses under the scope of accredited work, the subcontractor will be an AIHA or NVLAP accredited laboratory.

6.4.2. Unless the client has specified a particular location where EMLab P&K, LLC is to perform its services, EMLab P&K, LLC may perform services for the client at any laboratory in its network provided that for the samples being subcontracted, the subcontract lab has the same requested services on its Scope of Accreditation as the lab to which the samples were originally sent. Before samples are subcontracted, EMLab P&K, LLC will advise the client of the arrangement in writing by requesting a Transfer Approval/Disapproval Agreement to be completed by the client. These agreements will be kept on file for future use. Every attempt will be made to gain the client's approval in writing using the Transfer Approval/Disapproval Agreement. If the client does not respond to the approval request, EMLab P&K, LLC retains the right, at its discretion, to subcontract services ordered by the client to another EMLab P&K, LLC laboratory or other laboratories.

6.4.3. EMLab P&K, LLC will be held responsible for data produced as a result of subcontracting of work, except in the case where the client or a regulatory authority specifies which subcontractor is to be used.

6.4.4. Prior to submitting samples to subcontractors the samples may be logged into LabServe and assigned an EMLab Project ID number. A Chain of Custody (COC) must be signed to document transfer to the subcontracting laboratory. All data reported from a subcontractor shall list the name of the laboratory performing the analysis. A copy of the COC must be part of the report sent to EMLab P&K, LLC after completion of the analysis by the subcontractor.

7.0 DOCUMENT CONTROL AND CONTROL OF RECORDS (Document EM-QA-S-2059)

7.1 Document Control

7.1.1. All documents that are part of the quality assurance system, either internally generated or external, shall be controlled. These documents include, but are not limited to, the Quality Control Manual, control charts, equipment manuals, training forms, personnel forms, reference texts, software, and external reporting templates, QC forms, management system reporting templates and SOP's. These documents are controlled either through the TestAmerica Corporate Quality Office or the EMLab P&K, LLC LabServe Document Control system.

7.1.2. Official records contain data and/or information acquired or generated by the laboratory. Records include, but are not limited to, completed logbooks/log sheets, instrument printouts, completed calibration spreadsheets, completed worksheets, completed datasheets, completed protocols, completed training checklists and supporting data, proficiency test results, internal audit reports, root cause investigations, control charts, reference texts, client complaints, equipment manuals and equipment qualifications.

7.1.3. A Master List of Controlled Documents is maintained in LabServe and can be accessed by all employees using the “My Docs" tab on the LabServe home page.

7.1.4. The formal distribution of documents and records to all employees is conducted through a company wide electronic release of revisions in LabServe, and not on an individual basis. All users with log in credentials are afforded access only to current revisions of released documents and records through the database. No formal distribution record is required.

7.1.5. Printing hardcopies of official documents can lead to uncontrolled copies and present a serious risk to our Management systems. Printing of SOPs is not permissible unless strictly and exclusively used for review or training purposes. Any document printed for this purpose must be labeled as “UNCONTROLLED” or “OBSOLETE” to indicate it is not a controlled copy. Any official document printed for these purposes must be discarded/shredded immediately following completion of review or training. All quality assurance and operational documents are uniquely identified and include a document number and revision numbering system. All pages of quality documents are numbered in the “X” of “Y” format where “X” is the documents page number and “Y” is the total number of pages in that document or consecutive page numbers on each page and a clear indication of the end of the report. All reports are signed by a designated laboratory signatory or signatories.

7.1.6. All documents that are revised must go through a Change Control Process using “Document Control and Control of Records” SOP EM-QA-S-2059.

7.1.7. All method standard operating procedures are reviewed biennially by the Quality Assurance Department for each facility as part of the internal audit. This is to ensure that the documents reflect the actual work processes within each laboratory and that the method is current. Corrections, additions and revisions are made to ensure that all documents are current.

7.1.8. Handwritten changes to SOPs are not allowed.

7.1.9. Changes to documents stored electronically will be strictly controlled by the LabServe document control system. Changes must be approved by the QA

Managers and Regional Directors. The document owner and Technical Director may also be requested to approve document.

7.2 Adoption and Revision of Standard Operating Procedures

7.2.1. Standard Operating Procedures (SOP's) are generated by the laboratory for individual processes involved in the receipt, log-in, preparation, analysis, data reduction, quality control and reporting of samples in the laboratory.

- **a.** All SOPs are to be followed as written.
- **b.** The client and Management must be informed if this is not possible.
- **c.** Data qualifiers may be used in extenuating circumstance to explain modifications to the procedure.
- **d.** SOP change requests can be made by initiating a QAZilla bug.
- **e.** SOPs are assigned unique numbers in LabServe prior to being released.
- **f.** “Writing an SOP” CW-Q-S-002 describes the methodology for writing SOP's.
- **g.** Before a SOP is adopted for use in the laboratory, the Regional Director (or other Managerial Designee) and the Quality Assurance Manager must endorse the document.

7.3 Method and Report Documentation

Documentation for the methods is maintained in LabServe and can be accessed by all employees on the EMLab P&K, LLC website home page. Unalterable electronic files of the projects and reports are stored on the EMLab P&K, LLC internet site.

7.3.1. Standard Operating Procedures follow the following format described in “Writing an SOP” SOP CW-Q-S-002. Method Standard Operating Procedures (SOPs) contain the following categories where applicable:

- **a.** Method Title, Document Number, Effective Date and Revision Number
- **b.** Scope and Application
- **c.** Summary of Method
- **d.** Definitions - A table containing definitions unique to the protocol
- **e.** Interferences
- **f.** Safety-Actions or precautions that must be taken to ensure the safety and health of the individual, and other laboratory staff, when performing the procedure
- **g.** Equipment/Instruments
- **h.** Media and Reagents-A list detailing the quantity and requirement for the media used in processing the samples, and materials used in the procedure
- **i.** Sample Collection, Preservation, Shipment and Storage
- **j.** Quality Control-A list of the quality control processes required during the execution of the procedure and an outline of the required documentation, including any attachments or forms
- **k.** Procedures-Detailed step by step instructions for the execution of the procedure
- **l.** Calculations-Algebraic descriptions of the calculations used in the processing of the samples and/or calculating the final results
- **m.** Method Performance
- **n.** Pollution Control and Waste Management
- **o.** References/Cross References -A standardized list of any protocols or articles referenced in the development of the procedure
- **p.** Method Modifications (if applicable)
- **q.** Attachments
- **r.** Revision History

7.3.2. Non-Analytical Standard Operating Procedures (SOPs) contain the following categories where applicable:

a. Purpose
b. Scope
c. Safety
d. Definitions
e. Procedures
f. Responsibilities
g. References/Cross References
h. Attachments
i. Revision History

7.4 Control of Records (SOP EM-QA-S-2059)

7.4.1. The laboratory will keep all laboratory records a minimum of three years, unless otherwise dictated by specific regulatory requirements. To allow for available documentation in the event of a data review request, quality control laboratory records required to support retained data and associated reporting will be maintained for a minimum of 4 years. Hard copies are maintained in a controlled environment to minimize deterioration and degradation.

7.4.2. Training records are to be maintained throughout the period of employment per individual and for a minimum of 3 years, unless otherwise dictated by specific regulatory requirements, subsequent to the end of employment.

7.4.3. All obsolete documents shall be removed from general access points, and clearly marked/categorized as “obsolete” or “archived” in such a manner as to indicate that the publication has been made obsolete.

a. All obsolete hard copy documents are to be turned into QA for appropriate disposal or archiving.

7.4.4. After the specified retention period, obsolete records may be shredded and/or deleted. Records of these disposals will be maintained through document disposal logs (file information, date of disposal, by whom).

7.4.5. In the event that the laboratory transfers ownership or goes out of business, the laboratory shall ensure that the records are maintained or transferred according to client’s instructions. Upon ownership transfer, record retention requirements shall be addressed in the ownership transfer agreement and the responsibility for maintaining archives is clearly established. In addition, in cases of bankruptcy, appropriate regulatory and state legal requirements concerning laboratory records must be followed. In the event of the closure of the laboratory, all records will revert to the control of the corporate headquarters. Should the entire company cease to exist, as much notice as possible will be given to clients and the accrediting bodies who have worked with the laboratory during the previous 5 years of such action.

7.5 Backup of Computer Records (CW-I-P-010). All computer records are backed up on a full backup every Friday evening.

7.5.1. Incremental backups are performed every Monday through Thursday night.

7.5.2. The full and incremental backups are stored on tape or disk for 7 to 30 days for rapid recovery should a file need to be restored.

7.5.3. The first 3 weeks of each month, the full backup is also stored on tape in-house in a media rated safe or sent offsite to a tape storage facility for a term of one month. These tapes are not overwritten for at least six weeks.

7.5.4. The full backup after the last Friday of the month is stored on tape and sent offsite for a term of 10 years.

7.5.5. All employees are required to log-off of the computer whenever leaving a workstation for an extended period of time.

7.5.6. Back-up of computer record off-site storage is maintained by Iron Mountain.

7.5.7. Instruments that are used for generation of client data and are not connected to the network (i.e. PCR, MIDI, etc.) must have data manually transferred to a networked location to be included in the Data Back Up process, CW-I-P-010. Manual transfer must be performed each day that data is generated for the instrument.

7.6 Client Confidentiality (Document EM-CS-S-1632)

7.6.1. All client confidential and proprietary information is protected by the laboratory. Laboratory staff will sign an agreement not to share confidential client information with anyone other than other laboratory staff. Details for maintaining Client Confidentiality can be found in "EMLab Policy for Protecting Client Confidentiality" SOP EM-CS-S-1632.

7.7 Sample Retention and Disposal of Samples (Document EM-HS-S-1286)

7.7.1. The laboratory will dispose of all samples in compliance with federal, state, and local health, safety, environmental contamination, and waste disposal standards. The laboratory maintains a system for the proper disposal of samples as outlined in Document EM-HS-S-1286, Procedure for the Retention and Disposal of Samples.

7.7.2. Samples are retained by the laboratory after analysis, depending on the sample type, following the minimum guidelines listed in Document EM-HS-S-1286.

a. Samples are placed in designated disposal bags, within appropriate containers or slide boxes and retained for the required period of time stated for the sample type. After the required retention period of the samples has been reached, the samples are removed from the containers or slide boxes and placed in a disposal container, to be collected by a federal, state, and local health, safety, environmental contamination, and waste disposal compliant disposal center.

b. Slides and materials with non-amplified microbial content are placed in sharps containers or equivalent. The sharps containers are placed in plastic bags and disposed in regular trash collecting areas in buildings.

8.0 QUALITY CONTROL

8.1 Quality Training

8.1.1. It is the responsibility of the Regional Director to assure that all laboratory personnel are trained in laboratory techniques, methods of analysis, and quality control procedures. The Quality Assurance Manager will ensure that all new employees are informed of all quality assurance aspects of their jobs and have a complete understanding of the quality assurance policies and procedures.

8.1.2. Protocols are used in training all new employees and the training will be documented.

8.1.3. All employees are required to update training as needed. On-going training is documented and maintained as part of individual training.

8.2 Quality Control Analyses (Document EM-QA-S-1994, EM-QA-S-1259)

8.2.1. A daily reference slide is required to be successfully completed prior to analysis of client samples each day. This is applicable to PCM and spore trap.

a. If an analyst does not successfully complete this analysis root cause investigation must be initiated and any determined corrective actions taken.

8.2.2. All analyses are subject to Blind Recounts on 10% of the samples analyzed. (or other specified accreditation or regulatory requirement) quality control analyses using the same analytical procedure used for the original analysis.

a. Blind Recounts on 10% of samples is per procedure, per analyst and per batch.

b. Batch Size is defined as 20 consecutive samples per procedure per analyst.

c. Replicate analysis shall be performed by a second qualified analyst

d. Duplicate and replicate samples may be selected by LabServe via automated programming based on the procedure, analyst, and batch premise.

8.2.3. For automated services, duplicate or replicate analysis failures automatically create a project specific task to resolve the discrepancy between the original and QC analyses.

a. For those services not yet automated, manual comparison to acceptance criteria must be performed as well as task assignment, and QAzilla bug entry where deemed necessary.

8.2.4. QC failures must be resolved as soon as possible, prior to report release. .

8.2.5. Data shall not be reported to the client until all required Quality Control has been successfully completed and evaluated against established acceptance criteria to ensure it is acceptable, where applicable. If the replicate analysis or data review by a second qualified individual has not been completed a qualifier must be added to the report before it is released to the client. All QC analyses shall be monitored by the Quality Assurance Department.

a. The QC failures from automated analysis automatically create a failure task from the task system. Non-automated analysis QC Failures shall be entered as manual tasks, and QAzilla bugs entered where deemed necessary.

b. QC failures shall be resolved by the original and second quality analyst whenever possible.

c. A third qualified individual shall be required when a resolution is not possible.

9.0 WORK OUT OF SPECIFICATION AND CORRECTIVE ACTIONS (Documents EM-QA-S-3553 and EM-AD-S-1630)

9.1 Whenever any work fails to meet the expected quality control criteria a Work Out of Specification and Corrective Action work process is initiated.

9.2 All employees are responsible for recognizing a Work Out of Specification and Corrective Action event and completing the initial documentation involved in the Work Out of Specification and Corrective Action procedure. All employees additionally have the authority to stop work in relation.

9.2.1. For analytical results that are out of specification analysts are required to follow the procedures in “Task System SOP” SOP EM-AD-S-1630 and “Conducting Root Cause Investigations and Implementing Corrective Actions” SOP EM-QA-S-3553. Results are reviewed by the analysts and a supervisor to resolve discrepancies.

9.3 Procedures for Corrective Action are implemented when a Work Out of Specification and Corrective Action event significantly departs from the standard Quality Control policies set up by the laboratory. The steps involved in the Corrective Action process include Root Cause Analysis, Corrective Actions Implementation, Monitoring of Corrective Actions, Auditing of Corrective Actions and Corrective Actions Sign-off. Documentation will be kept for all Corrective Actions. Senior Laboratory Management will be notified of a Corrective Action event.

9.4 The Regional Director or Facility Manager and the Quality Assurance Manager are responsible for ensuring the process is completed by the appropriate employee. The process evaluates the cause of the error and rates the seriousness of the error by a defined set of criteria. If an error is deemed to be significant and/or has affected the quality of the analysis, the actions to be considered for Work Out of Specification and Corrective Action process may include, but not be limited to, the following: Halting of work, withholding of reports, reassessing the QC procedures, and contacting the clients if reported results have been affected. There may be situations that will require the initiation of the corporate Data Recall Procedure, (corporate SOP CW-L-S-002). All Work Out of Specification and Corrective Action events are documented.

10.0 CONTINUOUS IMPROVEMENT AND PREVENTIVE ACTION (Document EM-QA-S-7577)

10.1 Laboratory personnel are expected to give input regarding continuous improvement and preventive action. Whenever laboratory employees encounter a situation or work process that can be improved, an out of specification quality control sample or situation, or any situation that the employee feels can be changed to improve the quality of the work performed by the laboratory, then the employee must initiate a QAzilla Bug for the Continuous Improvement and Preventive Action process .

11.0 UNCERTAINTY OF MEASUREMENT (Document EM-QA-S-1960)

11.1 The causes of uncertainty of measurement in the laboratory may include, but are not limited to, the following: variability in sample preparation, variability in analyte counting, variability in identification of analytes, contamination of samples, environmental conditions, interfering sample matrices, and competition among organisms in viable samples.

11.2 The Quality Assurance systems to reduce uncertainty in measurement include, but are not limited to, the following: duplicate and replicate analyses of samples for analysts and analysts in training, duplicate reading of cultures, formalized training in EMLab P&K, LLC methods of analysis, routine calibration of equipment used in the processing of samples, monitoring of environmental conditions, checking of computer software prior to implementation, use of reference materials, periodic analysis of unknown samples, data quality control by the person performing the task and an independent check by a person not involved in process, and consulting with fellow analysts who have more experience or knowledge on a particular identification. The parameters that are indicative of measurement of uncertainty are standard deviation obtained for low level samples and standard deviation obtained for differences of normalized data for duplicates and replicates.

11.3 The calculations for the Measurement of Uncertainty are unique to each analysis and may be found in Document EM-QA-S-1960.

12.0 QUALITY CONTROL REQUIREMENTS

12.1 Quality Control Requirements include, but are not limited to, duplicate analysis, replicate analysis, daily reference analysis, round robin and proficiency testing as applicable to the method being performed.

12.2 Quality control requirements, acceptance criteria, frequency and required trending practices are outlined in Document EM-QA-S-1994, Quality Control for Sample Analysis, Document EM-QA-S-1259, Quality Control for Asbestos Analysis, or within method specific documents.

12.2.1. A Quality Control and Acceptance Criteria Summary is available as Document EM-QA-R-5730.

12.3 All QC analyses (duplicates, replicates, daily references) including data reviews, must be completed prior to release of results to clients**.** When QC analysis cannot be completed on the same day, the results must be qualified with a report comment.

12.4 Proficiency Testing results are used in determining analyst accuracy and precision, where applicable, for demonstration of continuing capability. If proficiency testing problems arise, the analysts will be asked to review the samples again to determine the source of error. If necessary, corrective actions will be implemented as determined by Quality Assurance, the facility manager and/or the regional director based on the nature of the problems.

12.5 Asbestos-PLM (Document EM-AS-S-1267)

12.5.1. Quality Control Requirements include duplicate analysis, Monthly Reference Sample, and Proficiency testing.

12.5.2. Replicate and duplicate analyses are performed to evaluate the precision of a particular analysis. The routine analysis portion is processed through the laboratory in a normal manner. After the analysis has been completed, LabServe automated programming triggers the selection of 5% of the completed bulk samples for replicate analysis and 5% for duplicate analysis, based upon service, analyst and batch. The primary data along with the replicate and duplicate data will be statistically analyzed and control limits will be determined for the analyses (also automated by Labserve).

12.5.3. Proficiency Testing results are used in determining analyst accuracy and precision, where applicable, for demonstration of continuing capability. If proficiency testing problems arise, the analysts will be asked to review the samples again to determine the source of error. If necessary, corrective actions will be implemented as determined by Quality Assurance, the facility manager and/or the regional director based on the nature of the problems.

12.5.4. Asbestos Definitions

12.5.5. Limit of Quantitation: The Limit of Quantitation is 1%.

12.5.6. Less than One Percent (<1%): When the Laboratory reports a value of <1% using Calibrated Visual Area Estimation, this indicates that asbestos is present in an amount between trace and 0.99%, but cannot be accurately quantified at that level unless a 400 Point Count is performed.

12.5.7. Non-Detected (ND): The Laboratory reports “Non-Detected” when the laboratory homogenizes the sample in some way or analyzes a sufficient number of sub-samples to obtain a representative analysis whereby no asbestos fibers have been detected in any sub-sample preparations

12.5.8. Trace: When reporting the results of asbestos analyses using Calibrated Visual Area Estimation that are below the Laboratory’s Limit

of Quantitation, the Laboratory does not refer to or use the term “Trace”; the Laboratory reports the results as <1%. However, on occasion, samples can contain a “Trace” amount of asbestos. The term “Trace” means that asbestos was found to be present in the sample, but at a level below the minimum concentration needed to quantify at the reporting limit of 0.25% via a 400 Point Count (performed only by client request).

12.6 Asbestos - PCM (Document EM-AS-S-1260)

12.6.1. Microscopes must be adjusted at least once a day, per analyst. Also, the phase-shift detection limit of the microscope must be checked weekly using the HSE/NPL phase-contrast test slide.

12.6.2. Quality Control Requirements include duplicate analysis at the rate of 10%, Daily Reference Sample, Round Robin and Proficiency testing.

12.6.3. The Reference Sample Quality Control Analysis (PCM) is performed by each analyst per day of analysis to evaluate the precision and accuracy of each analyst for fiber identification. The goal of performing Daily Reference Sample Quality Control Analysis is for continuous improvement. The samples for the Daily Reference Sample Quality Control Analysis consist of reference permanent slides, each of which contains varying asbestos or non-asbestos fiber. Each analyst will analyze a randomly selected slide for each day, recording their results for the fiber counts. The identification by each analyst will be compared with the known standard through LabServe QC criteria automation. Any discrepancies in data comparison trigger an automated failure task for the analyst, who will be required to review the slide again to determine the source of error, and document any associated corrective actions.

12.6.4. Biannual ongoing demonstration of analyst proficiency using Proficiency Analytical Testing (PAT) samples is required.

12.7 Training of Analysts (Document EM-AD-S-1646 and EM-AS-S-1261)

12.7.1. All new analysts will receive documented training on EMLab P&K, LLC analysis and sample preparation procedures as it relates to their individual job functions. The extent and duration of the training will depend on the level of education and experience of the trainee as outlined in Documents EM-AD-S-1646 and EM-AS-S-1261.

12.7.2. All analytical training will include, but not be limited to, maintaining a log of the training procedures and duration, a list of criteria documenting that the required steps involved have been addressed during the training, testing using reference materials, comparison of trainee results against analyst results, and providing the trainee with training documents and reference texts.

12.7.3. Analysts and technicians will be authorized to perform a specific task and operate specific instruments once the applicable Training Acknowledgment and Authorization forms have been completed and signed by the trainee and trainer and all related data, reviews, and records have been submitted to Quality Assurance for final review and inclusion in analyst training records.

12.8 Analysis of Unknown Samples and Reference Materials

12.8.1. Unknowns-

a. Where applicable to job responsibilities, analysts will analyze unknown bacterial and/or fungal organisms at least monthly to ensure the consistency

of identification. Selection of organisms will be made randomly from laboratory stock cultures.

b. Where applicable to job responsibilities, analysts will analyze unknown samples for asbestos identification and quantitation.

c. Documentation of the analyses will be maintained by the Quality Assurance department.

12.8.2. Reference Materials -

a. EMLab P&K, LLC maintains a library of reference materials that are accessible to all analysts. Each facility is responsible for maintaining an individual list of reference texts which are maintained in LabServe.

b. EMLab P&K, LLC maintains a library of cultures and reference slides. EMPAT and other microbiological reference materials are grown and analyzed by the laboratory on a routine basis.

c. Asbestos reference samples from NIST (SRM #1866 and SRM #1867, where available) are also maintained in the laboratory.

12.8.3. The laboratory retains and utilizes proficiency testing materials for use as in-house instructional materials. The proficiency test results are used to verify accuracy and precision for each analyst and to judge the analysts' overall performance. Proficiency test results are used for inter-analyst comparisons and entered into the laboratory's management system records. The laboratory determines precision on the qualitative and quantitative analyses of samples by: repeatability - repeat analyses by the same analyst; -comparison of results from multiple slide mounts of the same material; reproducibility - analysis of samples by multiple analysts if possible (single analyst laboratories require more interlaboratory data); and interlaboratory analysis - analysis of samples by other laboratories. The laboratory also determines the accuracy of the qualitative and quantitative analyses of samples by: analysis of proficiency testing materials; analysis of standards either prepared in-house or purchased; and analysis of samples using independent methods (e.g., XRD, gravimetric, etc.).

12.8.4. When analyzing QC samples (duplicates, replicates) or reference samples, analysts must complete the analysis and enter the results into Labserve or record them on appropriate data sheets, without any assistance from or discussions with other analysts.

12.8.5. Analysts should not edit the result they reported in Labserve or recorded on appropriate data sheets.

12.9 Demonstration of Capability: (Document EM-AD-S-1646)

12.9.1. Semi-annual demonstrations of capability may be accomplished by successful completion of:

a. duplicates analyses;

b. replicate analyses;

c. daily reference analyses and

d. proficiency testing samples.

12.9.2. Acceptable performance criteria for Ongoing Demonstrations of competency are based on the performance characteristics for the method, established either from the data collected from the analysis of QC check samples, those already promulgated by the method, those set by an outside provider or an error rate of ≤1% for Asbestos PLM, and 5% for other analyses over a six month period.

12.9.3. For example, if an analyst is qualified to perform bacterial analyses and is required to participate in the AIHA EMPAT Bacterial Culturable Proficiency Testing program, the acceptable performance for their Ongoing Demonstration of Competency would be a score of ≥85%, which is set by the provider

13.0 ACCOMMODATIONS AND ENVIRONMENTAL CONTROLS

13.1 Environmental Monitoring (Document EM-HS-S-1585)

13.1.1. Environmental monitoring for airborne molds and bacterial contaminants is performed on a predetermined schedule per facility. Environmental monitoring for total airborne fibers including asbestos is performed in the laboratory as required by NVLAP/OSHA.

13.2 Laboratory Access

13.2.1. The laboratory facilities have controlled access and are designed to accommodate an efficient workflow and to provide a safe and comfortable work environment for employees. All visitors are required to sign in and are escorted by laboratory personnel. Access is controlled by various measures. A visitor is defined as any person who visits the laboratory who is not an employee of the laboratory. The exception is a client dropping off samples or a vendor dropping off supplies. In addition to signing into the laboratory, the Environmental, Health and Safety Manual contains requirements for visitors and vendors, including contractors. There are specific safety forms that must be reviewed and signed. Building keys and alarm codes are distributed to employees as necessary.

13.2.2. Clients are allowed to witness the processing of their samples with adequate notification of request, provided that other client information is not compromised and that a confidentiality agreement is on file. Whenever a client visits or tours the facility, the laboratory personnel will take adequate precautions to protect the integrity of the other clients' samples, information and data.

13.3 Adequate floor space and bench top area is provided to allow unencumbered sample preparation and analysis space. Sufficient space is also provided for storage of reagents and media, glassware, and equipment. Ample space is also provided for sample storage before analysis and archival storage of samples after analysis.

13.4 When any of the method or regulatory required environmental conditions change to a point where they may adversely affect test results, testing will be discontinued until the environmental conditions are returned to the required levels.

13.5 Adequate measures are taken to ensure good housekeeping in the laboratory and to ensure that any contamination does not adversely affect data quality. These measures include regular cleaning to control dirt and dust within the laboratory

14.0 QUALITY ASSURANCE REPORTS, AUDITS AND REVIEWS (Doc CW-Q-S-003)

14.1 Annual Quality Assurance Audits

14.1.1. The Quality Assurance department will perform and document annual audits of each facility. The audits will include, but are not be limited to the following items:

- **a.** Verify that the laboratory is following the written policies and procedures
- **b.** The operations of the laboratory comply with the requirements of AIHA-LAP, LLC, ISO 17025, NVLAP and other accrediting bodies as applicable.
- **c.** Identifying any problems with the management systems in the laboratory
- **d.** Summarizing Corrective Actions taken over the period of the audit
- **e.** Recurrence of findings from previous audits

f. Reporting any equipment that has gone out of specification
g. Review of reported projects

14.2 Quality Assurance Report

14.2.1. A Quality Assurance Report will be produced and distributed to the management team at least monthly. The reviews will include, but not be limited to the following items:

a. Revised Reports
b. Data Recalls
c. Proficiency Testing
d. Client Complaints
e. Internal Audit Findings
f. SOP/Method Compliance
g. Trending
h. Corrective Actions
i. Ethics Training status

14.3 Management Review of Management Systems (TestAmerica Document CA-Q-S-004)

14.3.1. The Laboratory Management will perform documented yearly reviews of the Management System. The reviews will include, but not be limited to the following items:

a. Suitability of policies and procedures
b. Summarizing internal audits
c. Management reports
d. Corrective and Preventive Actions
e. Assessments by accrediting bodies or regulatory agencies
f. Results of proficiency tests and inter laboratory comparisons
g. Changes in the volume or type of testing
h. Client complaints and communications
i. Staffing resources and training requirements
j. Recommendations for improvement
k. Other relevant factors, to include quality control activities.

15.0 PARTICIPATION IN PROFICIENCY TESTING

15.1 External Proficiency Testing

15.1.1. EMLab P&K, LLC participates in external proficiency testing programs consistent with the requirements outlined by the Laboratory's accreditation, licensing, or registration bodies, and at the frequency required to remain compliant with such programs.

15.1.2. The goal of participation is to test the laboratory's ability to follow the test method and to achieve the proper accuracy, precision, and detection limits.

15.1.3. The Laboratory's proficiency test contractor sends test samples, data sheets, and instructions for performing the test and reporting the results to each participating laboratory.

15.1.4. All samples are analyzed in a manner similar to client samples, and the analyses are conducted in accordance with the current promulgated test method or the laboratory's normal in house standard operating procedure(s).

15.1.5. When the analysis includes subjective analyst evaluation (e.g., microscopic identification and/or quantitation), all analysts, including those in sub-facilities,

are required to participate in proficiency testing, with each analyst separately analyzing, recording, and reporting test results.

15.1.6. The resulting data from the analyses or proficiency test samples are utilized for inter-analyst and inter-laboratory comparisons, and/or initial and continuing demonstrations of capability, with all raw data and results retained in LabServe, or appropriate data sheets.

15.1.7. The Quality Assurance Department or designee is responsible for collecting test reports and distributing the results to participating Laboratories.

15.1.8. All Laboratory as well as individual analyst test failures are resolved through the use of the QAzilla System.

15.1.9. Proficiency testing samples shall not be contracted out to another laboratory for sub-processing or analysis, either internally or externally.

15.1.10. Results or analysis of proficiency testing samples shall not be discussed with other laboratories until the final results have been published by the program administrator.

15.1.11. All documentation between the participating laboratory and the program administrator is retained by the laboratory for a minimum of four (4) years and is available upon request to prospective clients wishing to utilize the Laboratory's services, is provided to the sales and marketing department for use as supporting documentation when submitting contractual bids, and is also provided to local, state, or government entities when required as part of the accreditation, registration, or licensing process.

15.2 Round Robin Interlaboratory Exchanges (Document EM-QA-S-1596)

15.2.1. All Laboratories within the EMLab P&K, LLC network participate in a minimum of two (2) spore trap and two (2) PCM asbestos round robin exchanges per year, separated by approximately 6 months, depending on the Fields of Testing (FoTs) listed on the individual Laboratory's scope of accreditation, with each exchange completed within a six month timeframe.

- **a.** At a minimum, each exchange includes the participation of at least three (3) laboratories, and includes a minimum of four samples at varying concentrations.
- **b.** All samples utilized in the round robin exchanges consist of or resemble real-world samples to the greatest extent possible, with target concentrations appropriate for the program in which they are being applied.
- **c.** When the analysis includes subjective analyst evaluation (e.g., microscopic identification and/or quantitation) all analysts at each laboratory are required to assess the samples independently, with the results recorded and reported for each participating analyst and retained as part of the management system records.
- **d.** The reported data are in units appropriate for the type of testing performed as well as to the data's end use, such as for comparison to target standards.
- **e.** Where applicable, the resulting data is evaluated using appropriate statistical methods and any outliers are identified and excluded from the acceptance criteria calculation(s).
- **f.** For quantitative analyses, acceptance criteria are based on the presence or absence of the analyte of interest as well as the average of the results from all participating analysts.

g. For semi quantitative analyses, acceptance criteria are based on the presence or absence of the analyte of interest as well as the estimation of the amount present.
h. For qualitative analyses, acceptance criteria are based on the presence or absence of the analyte of interest.
i. The Quality Assurance Department or designee is responsible for data collection, evaluation, and distribution of the final results, via hardcopy or electronically.
j. When significant differences are encountered in the results, the participating laboratories are required to resolve them through the use of the QAzilla system.

15.2.2. All Laboratories within the EMLab P&K, LLC network participate in a minimum of ten PLM asbestos round robin exchanges per year, separated by approximately 1 month
a. At a minimum, each exchange includes the participation of at least three (3) laboratories, and includes a minimum of one sample.
b. All samples utilized in the round robin exchanges consist of difficult samples.
c. All analysts at each laboratory are required to assess the samples independently, with the results recorded and reported for each participating analyst and retained as part of the management system records.
d. Where applicable, the resulting data is evaluated using known acceptance criteria for type, percentage and optical properties.
e. The Quality Assurance Department or designee is responsible for data collection, evaluation, and distribution of the final results.
f. When failures are encountered in the results, the participating analysts are required to resolve them through the use of the QAzilla system.

16.0 ACCREDITATION AND LOGO ADVERTISING POLICY

16.1 EMLab P&K, LLC strives to comply with the advertising and logo requirements of all external licensing/accrediting bodies. As such, the accreditation and logo advertising polices of all external licensing/accrediting bodies (i.e.NIST NVLAP, AIHA-LAP, LLC EMLAP and IHLAP programs etc) must be reviewed and all conditions adhered to prior to use in advertising and/or reporting.

16.1.1. All use of external licensing/accrediting body logos and accreditation information in advertising or otherwise distributed material must be pre-approved by the management team (Regional Directors and Quality Assurance).

17.0 GENERAL LABORATORY AND PROHIBITED PRACTICES (TestAmerica CW-L-P-004)

17.1 Improper Laboratory Practices (include but are not limited to)

17.1.1. Non-compliance to SOP: Departure from SOP without supervisors or management's approval and appropriate documentation.

17.1.2. Fabrication of data or other information: Creating information that is not true, creating data for an analysis that was not performed, creating information for a sample that was not collected, claiming ownership for work performed by other analysts, equipment or facilities and cutting and pasting reports and support data.

17.1.3. Misrepresentation of QC results: Signing or initialing a document, or entering data into LabServe, indicating that you have completed a QC task, but in reality you have not. Forging other people's initials or taking credit for a task that was actually performed by another individual. Discussing with other analysts QC results and altering the results. Using a different method to analyze a duplicate or replicate other than the method used to analyze a normal sample.

17.1.4. Deletion of Non-compliant data: Deleting non-compliant analytical results, QC samples or blanks. Failing to record non-compliant data for these samples. Destroying a form or record.

17.1.5. Improper alteration of analytical conditions: Recording data on non-document controlled forms and then only recording "good" data on the official form after the completion of the analysis. Not documenting any changes to the standard procedure. Reading a smaller percentage of a trace than is recorded in LabServe.

17.1.6. Not performing all of the proper steps required to identify an organism or isolate: Basing the identification of an organism on limited information when there are other steps that must be followed to identity an organism.

17.1.7. Improper date/time setting: Altering the recorded times that samples were collected, prepped and analyzed.

17.1.8. Being aware that an error could have occurred but not taking the proper corrective actions.

17.1.9. Concealment of a known problem: Concealing a known sample problem or QC failure. Concealing an unethical or improper practice from management.

17.2 Good Laboratory Practices (include but are not limited to):

17.2.1. Food and drinks are not allowed in the laboratory.

17.2.2. Children and pets are not allowed in the laboratory.

17.2.3. Hands must be washed after performing bench work and before consuming food or drink.

17.2.4. Hands must be washed before leaving the laboratory.

17.2.5. No horseplay is allowed in the laboratory.

17.2.6. Mouth pipetting is not allowed in the laboratory.

17.2.7. All disposable materials consumed during the processing of a sample must be discarded into the proper container.

17.2.8. Consider every sample as potentially dangerous. Handle samples in manner that reduces the potential of contamination to others and the laboratory environment.

17.2.9. Wipe every surface involved in the processing of samples with disinfectant after working with the samples.

17.2.10. Do not leave the lids off of plates at any time, and if necessary reseal plates with parafilm after analysis.

17.2.11. Only open asbestos samples in appropriate HEPA filtered hoods with a minimum flow rate of 75 fpm.

17.2.12. It is every employee's responsibility to report any safety concerns or incidence of non-compliance to supervisors, quality assurance officer, safety coordinator, or corporate management.

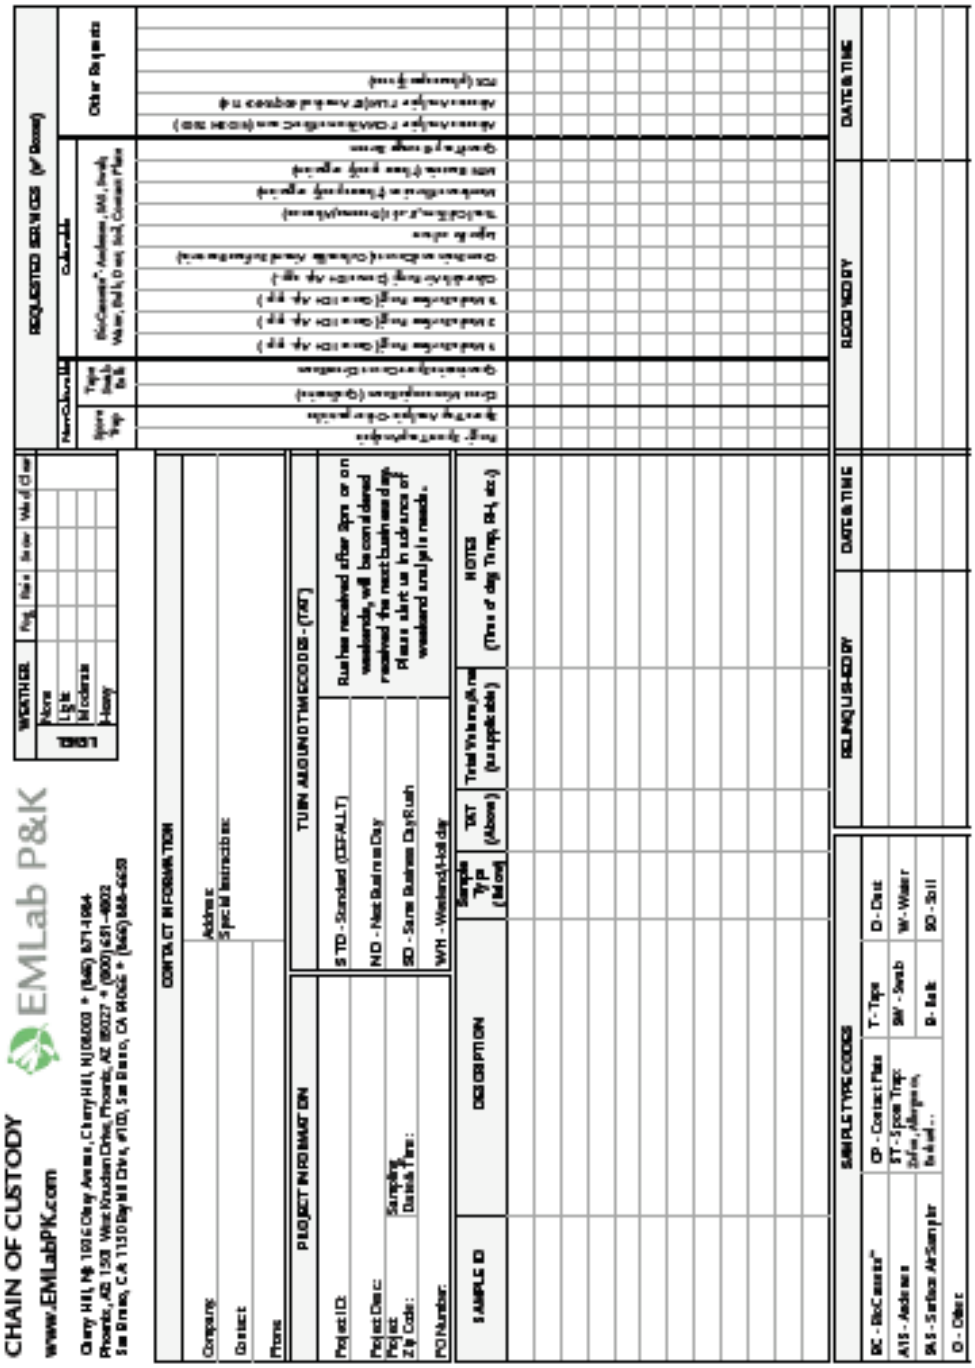
18.0 Revision History

18.1 Revision 06 November 12, 2012

18.1.1. Updated the references to other controlled document numbers and titles. (Sections 2.3.2, 2.5.1.a, 2.5.1.e, 4.1, 4.9, 5.2, 9.0, 14.0, 14.3)
18.1.2. On the cover page we removed the Fort Worth Lab, added Kamash as Regional Director for the Central Region, added Michael Manning as the Technical Manager for the Denver lab and added signature for all approvers.
18.1.3. In section 3.0 the training file responsibilities were changed from HR to QA, the General Manager was removed, the QAM reporting relationship was updated, the IT job title, and the Senior analysts responsibilities were updated to include responsibilities from all analysis not just spore trap.
18.1.4. In section 4.3 the calibration and maintenance sections were combined.
18.1.5. In section 5.2 a reference to the sample acceptance policy was included and the list of "what samples should and should not demonstrate was removed.
18.1.6. In section 5.8.1 a reference to the SOP 3548 "Method Validation" was included
18.1.7. In section 5.12 the data review process was updated and a reference to SOP 1637 "Data Review Procedures" was added.
18.1.8. In section 7.4.4. the requirement for a sample disposal log was added.
18.1.9. In section 7.5.7 the procedure for instrument back-up for instruments not on the server was added.
18.1.10. In section 7.7 a reference to the sample disposal procedure was added and details removed.
18.1.11. In section 9.4 the responsibilities for root cause analysis, corrective and preventative actions were updated to include all employees.
18.1.12. In section 12.0 a reference to Document 1994, Quality Control for Sample Analysis, Document 1259, Quality Control for Asbestos Analysis, or within method specific documents was added to the QA control requirements and method specific requirements were removed.
18.1.13. In section 16.0 the accreditation and logo policy was updated to reference the policies and not list them.
18.1.14. In the attachments sections the org charts and COC were updated.

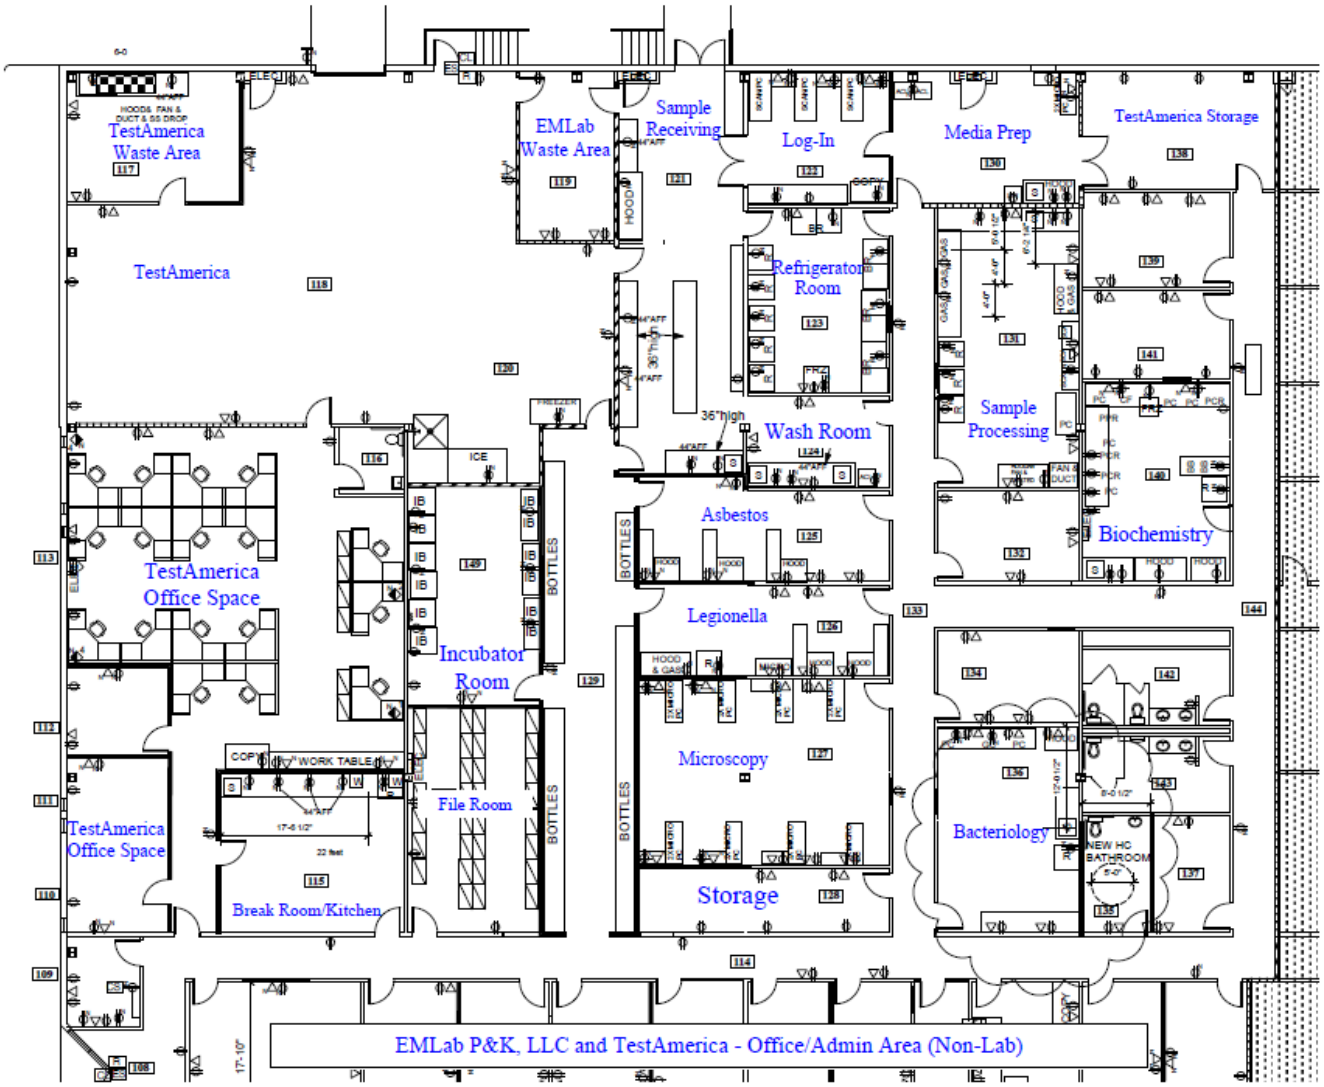
18.2 Revision 07 November 28, 2012
18.2.1. Added Revision History section
18.2.2. Added "interested parties" to section 6.3.1
18.2.3. Updated Western region Organizational Chart.

18.3 Revision 08, April 2013
18.3.1. Updated lab information for Marlton and Irvine labs.
18.3.2. Updated Terms of Condition
18.3.3. Addition of a select number of ISO/IEC 17025:2005 references
18.3.4. Updated Technical Manager for San Diego
18.3.5. Changed term "AIHA" to "AIHA-LAP, LLC"
18.3.6. Moved commitment to ISO policy to the "Quality Management System" section.
18.3.7. Revised job description of Regional Director and Senior Analysts to include "Can act as the AIHA Technical Manager or NVLAP Approval Signatory if approved by respective regulatory agency."
18.3.8. Added job descriptions for the EMLAP and IHLAP Technical Managers.
18.3.9. Added requirement to enter QA bug for out of service equipment.



18.3.10. Updated "Client Concern" and "Corrections to Reports" section to reflect recent changes to the individual SOPs.
18.3.11. Updated round robin frequency.
18.3.12. Revised Org Charts.

18.4 Revision 09, September 2014



18.4.1. Updated Florida and San Diego addresses
18.4.2. Updated Approvals from Denver, San Diego, Virginia, Phoenix and Las Vegas
18.4.3. Updated titles of referenced documents.
18.4.4. Updated stop work policy
18.4.5. Updated document control system form Intelex to LabServe.
18.4.6. Added qualifications for asbestos PLM analysts
18.4.7. Updated EMLAP Technical Managers qualifications
18.4.8. Added asbestos PLM round robin procedures
18.4.9. Added requirement to share client surveys with entire staff
18.4.10. Updated significant figure reporting
18.4.11. Added requirement that QC sample results are not to be discussed between analysts.
18.4.12. Updated definition non-detect for asbestos samples.
18.4.13. Added requirement that asbestos PCM microscope adjustment is per analysts
18.4.14. Updated accreditation and logo advertising policy to include approval.
18.4.15. Updated proficiency testing sample analysis requirements.

Access Agreement

Access Agreement for ECIA Brownfield Assessments

THIS ACCESS AGREEMENT, made and entered into by ***JP Rental Development LLC*** (hereinafter referred to as the "GRANTOR"), and the East Central Iowa Intergovernmental Association (ECIA), authorizes ECIA's employees, contractors, and subcontractors access to the property(ies) owned by the GRANTOR, located at ***1002 S 4th St, Clinton, IA 52732***; hereinafter referred to as the "Property(ies)". Access to the Property(ies) is requested for the purpose of:

(1) Conduct a site visit to complete a Phase I Environmental Site Assessment;
(2) Conduct a site visit and complete an Asbestos Containing Materials (ACM) inspection;

FOR THE PARTIES' JOINT AND MUTUAL CONSIDERATION IT IS HEREBY AGREED AS FOLLOWS:

1. That the undersigned GRANTOR states they are the lawful possessor of the Property(ies) located at ***1002 S 4th St, Clinton, IA 52732***, and generally identified as parcel numbers ***80-59730000/2107306013***.

2. That the GRANTOR hereby grants and conveys to ECIA's employees, contractors, and subcontractors temporary access to the real estate identified in section 1 of this Agreement for the purpose of ***conducting a site visit to complete a Phase I Environmental Site Assessment and completing an Asbestos Containing Materials (ACM) inspection.***

3. That the GRANTOR has a good and lawful right to grant access to the Properties.

4. That the individual or individuals executing this Agreement on behalf of the GRANTOR has or have authority to grant the access rights conveyed to ECIA herein.

5. That GRANTOR shall indemnify and hold harmless ECIA against any damage to the Properties arising from ECIA's presence on the premises, unless such damage is a result of an act or omission of GRANTOR or GRANTOR's representatives.

   GRANTOR waives any and all claims against ECIA and its representatives and, to the maximum extent permitted by law, agrees to defend, indemnify, hold harmless ECIA and its representatives from any claim, liability, and/or defense costs for injury or loss arising from the discovery of hazardous materials, including, but not limited to, any costs created by delay of the project and any cost associated with possible reduction of the Property's(ies') value or the value of any other property impacted by the discovery of hazardous materials. As such, notwithstanding any other provision of this Agreement, ECIA's obligations to restore the Property(ies) and to indemnify and hold GRANTOR harmless shall not extend to any damage resulting from any one or more of the following: (a) the discovery of hazardous materials on the Properties; (b) the spread of hazardous materials already on the Properties as a result of assessment for the same, so long as ECIA's consultants, agents, contractors and employees use commercially reasonable measures to not spread or disturb any such hazardous materials in conducting the Assessments; or (c) latent defects in the Properties.

6. That ECIA shall access the Properties during regular business hours, unless otherwise agreed to by the GRANTOR.

7. That ECIA shall restore the Properties as nearly as practicable to its original condition following completion of the aforementioned scope of work, subject to paragraph 5 above.

8. That ECIA shall use best efforts to avoid disrupting the GRANTOR's activities on the Property(ies) while conducting the aforementioned scope of work.

9. When soil or water samples are collected on the property described above, split samples will be provided to the property owner, if the property owner requests split samples and provides sample bottles before the samples are collected.

10. The property owner agrees not to damage or interfere with the use of any monitoring well that is installed as permitted herein and agrees to notify third parties who plan to conduct any activity on the property described above that monitoring wells have been installed on the property.

11. The term of this Agreement shall commence on the date of execution and shall automatically expire upon completion of the aforementioned scope of work. In the event permanent monitoring wells are installed as part of the scope of work, the terms of this Agreement shall continue indefinitely to allow ECIA to gather samples from such wells and properly close out such wells. If the property owner wishes to withdraw permission for continued access, the property owner shall notify ECIA of that fact. ECIA shall, within 90 days after receiving such notice, either abandon any wells installed by ECIA that remain on the property or obtain a court order to allow continued access.

12. ALL COSTS FOR COMPLETION OF THE AFOREMENTIONED SCOPE OF WORK SHALL BE THE SOLE RESPONSIBILITY OF ECIA.

13. This Agreement and the rights and obligations of the parties hereto shall be governed by and construed per the laws of the State of Iowa.

In WITNESS WHEREOF, the parties have executed this Agreement as of the date written below:

Lead Based Paint Activities, Public Health Department (641) Iowa Administrative Code,Chapter 70

CHAPTER 70
LEAD-BASED PAINT ACTIVITIES

641—70.1(135) Applicability. This chapter applies to all persons who are lead professionals in Iowa, all firms that perform lead professional activities in Iowa, and training providers that offer training for lead professionals. This chapter requires lead professionals and firms to be certified and establishes specific requirements for how lead-based paint activities must be performed if a property owner, manager, or occupant chooses to undertake them. However, nothing in this chapter requires a property owner, manager, or occupant to undertake any particular lead-based paint activity. This chapter also provides for the approval of courses that provide training for lead professionals.
[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.2(135) Definitions.

"Adequate quality control" means a plan or design which ensures the authenticity, integrity, and accuracy of samples, including dust, soil, and paint chip or paint film samples. Adequate quality control also includes provisions for representative sampling.

"Approved course" means a course that has been approved by the department for the training of lead professionals.

"Approved lead-safe work practices training program" means a lead-safe work practices training program that has been approved by the department.

"Arithmetic mean" means the algebraic sum of data values divided by the number of data values. For example, the sum of the concentration of lead in several soil samples divided by the number of samples is the arithmetic mean.

"Certified elevated blood lead (EBL) inspection agency" means an agency that has met the requirements of 641—70.5(135) and that has been certified by the department.

"Certified elevated blood lead (EBL) inspector/risk assessor" means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

"Certified firm" means a firm that employs certified lead professionals and has met the requirements of 641—70.7(135) for certification and has been certified by the department.

"Certified lead abatement contractor" means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

"Certified lead abatement worker" means a person who has met the requirements of 641—70.5(135) and who has been certified by the department.

"Certified lead inspector/risk assessor" means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

"Certified lead professional" means a person who has been certified by the department as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, lead abatement worker, project designer, sampling technician, or lead-safe renovator.

"Certified lead-safe renovator" means a person who has met the requirements of 641—70.5(135) for certification and who has been certified by the department.

"Certified project designer" means a person who has met the requirements of 641—70.5(135) for certification or interim certification and who has been certified by the department.

"Certified sampling technician" means a person who has met the requirements of 641—70.5(135) and who has been certified by the department.

"Chewable surface" means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew.

"Child-occupied facility" means a building, or portion of a building, constructed prior to 1978, that is described by all of the following: (1) The building is visited on a regular basis by the same child, who is less than six years of age, on at least two different days within any week. For purposes of this chapter, a week is a Sunday through Saturday period. (2) Each day's visit by the child lasts at least 3 hours, and the combined annual visits total at least 60 hours. A child-occupied facility may include, but

is not limited to a child care center, preschool, or kindergarten classroom. A child-occupied facility also includes common areas that are routinely used by children who are less than six years of age, such as restrooms and cafeterias, and the exterior walls and adjoining space of the building that are immediately adjacent to the child-occupied facility or the common areas routinely used by children under the age of six years. "Child-occupied facility" also includes any building where lead-based paint activities are conducted immediately prior to or during the conversion of the building to a child-occupied facility.

"Cleaning verification card" means a card developed and distributed, or otherwise approved, by the U.S. Environmental Protection Agency (EPA) for the purpose of determining, through comparison of wet and dry disposable cleaning cloths with the card, whether postrenovation cleaning has been properly completed.

"Clearance level" means the value at which the amount of lead in dust on a surface following completion of interim controls, lead abatement, paint stabilization, standard treatments, ongoing lead-based paint maintenance, rehabilitation, or renovation is a dust-lead hazard and fails clearance testing. The clearance level for a single-surface dust sample from a floor is greater than or equal to 40 micrograms per square foot. The clearance level for a single-surface dust sample from an interior windowsill is greater than or equal to 250 micrograms per square foot. The clearance level for a single-surface dust sample from a window trough is greater than or equal to 400 micrograms per square foot.

"Clearance testing" means an activity conducted following interim controls, lead abatement, paint stabilization, standard treatments, ongoing lead-based paint maintenance, rehabilitation, or renovation to determine that the hazard reduction activities are complete. Clearance testing includes a visual assessment, the collection and analysis of environmental samples, the interpretation of sampling results, and the preparation of a report.

"Common area" means a portion of the building that is generally accessible to all occupants. This includes, but is not limited to, hallways, stairways, laundry and recreational rooms, porches, exteriors, playgrounds, community centers, garages, and boundary fences.

"Common area group" means a group of common areas that are similar in design, construction, and function. Common area groups include, but are not limited to, hallways, stairwells, and laundry rooms.

"Component" or *"building component"* means specific design or structural elements or fixtures of a building, residential dwelling, or child-occupied facility that are distinguished from each other by form, function, and location. These include, but are not limited to, interior components such as ceilings, crown moldings, walls, chair rails, doors, door trim, floors, fireplaces, radiators and other heating units, shelves, shelf supports, stair treads, stair risers, stair stringers, newel posts, railing caps, balustrades, windows and trim (including sashes, window heads, jambs, sills or stools and troughs), built-in cabinets, columns, beams, bathroom vanities, countertops, and air conditioners; and exterior components such as painted roofing, chimneys, flashing, gutters and downspouts, ceilings, soffits, fascias, rake boards, cornerboards, bulkheads, doors and door trim, fences, floors, joists, latticework, railings and railing caps, siding, handrails, stair risers and treads, stair stringers, columns, balustrades, windowsills or stools and troughs, casings, sashes and wells, and air conditioners. Each side of a door is considered a component within its respective room.

"Component type" means a group of like components constructed of the same substrate in the same multifamily housing. For example, "wood door" is a component type.

"Composite sample" means the collection of more than one sample of the same medium (e.g., dust, soil, or paint) from the same type of surface (e.g., floor, interior windowsill, or window trough) such that multiple samples can be analyzed as a single sample.

"Concentration" means the relative content of a specific substance contained within a larger mass, such as the amount of lead (in micrograms per grams or parts per million of weight) in a sample of soil or dust.

"Containment" means a system of temporary barriers to protect workers, residents, and the environment by controlling exposures to the dust-lead hazards and debris created during renovation or lead abatement.

"Course agenda" means an outline of the key topics to be covered during a training course, including the time allotted to teach each topic.

"Course test" means an evaluation of the overall effectiveness of the training which shall test the trainees' knowledge and retention of the topics covered during the course.

"Course test blueprint" means written documentation identifying the proportion of course test questions devoted to each major topic in the course curriculum.

"Department" means the Iowa department of public health.

"Deteriorated paint" means any interior or exterior paint or other coating that is cracking, flaking, chipping, peeling, or chalking, or any paint or coating located on an interior or exterior surface that is otherwise damaged or separated from the substrate of a building component.

"Discipline" means one of the specific types or categories of lead-based paint activities identified in this chapter for which individuals may receive training from approved courses and become certified by the department. For example, "lead inspector/risk assessor" is a discipline, and "lead-safe renovator" is a discipline.

"Distinct painting history" means the application history, as indicated by its visual appearance or a record of application, over time, of paint or other surface coatings to a component or room.

"Documented methodologies" means methods or protocols used to sample for the presence of lead in paint, dust, and soil.

"Dripline" means the area within three feet surrounding the perimeter of a building.

"Dry disposable cleaning cloth" means a commercially available dry, electrostatically charged, white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or countertops.

"Dry sanding" means sanding a surface that is partially coated with paint or other surface coating without moisture and includes hand and mechanical methods of sanding.

"Dry scraping" means scraping a surface that is partially coated with paint or other surface coating without moisture and includes hand and mechanical methods of scraping.

"Dust-lead hazard" means surface dust in residential dwellings or child-occupied facilities that contains a mass-per-area concentration of lead greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on window troughs based on wipe samples. A dust-lead hazard is present in a residential dwelling or child-occupied facility when the weighted arithmetic mean lead loading for all single-surface or composite samples of floors and interior windowsills is greater than or equal to 40 micrograms per square foot on floors, 250 micrograms per square foot on interior windowsills, and 400 micrograms per square foot on widow troughs based on wipe samples. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled residential dwelling in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled residential unit on the property. A dust-lead hazard is present on floors, interior windowsills, or window troughs in an unsampled common area in a multifamily dwelling if a dust-lead hazard is present on floors, interior windowsills, or window troughs, respectively, in at least one sampled common area in the same common area group on the property.

"Elevated blood lead (EBL) child" means any child who has had one venous blood lead level greater than or equal to 20 micrograms per deciliter or at least two venous blood lead levels of 15 to 19 micrograms per deciliter.

"Elevated blood lead (EBL) inspection" means an inspection to determine the sources of lead exposure for an elevated blood lead (EBL) child and the provision within ten working days of a written report explaining the results of the investigation to the property owner and occupant of the residential dwelling or child-occupied facility being inspected and to the parents of the elevated blood lead (EBL) child. A certified elevated blood lead (EBL) inspector/risk assessor shall not determine that a residential dwelling is free of lead-based paint as a result of an elevated blood lead (EBL) inspection.

"Elevated blood lead (EBL) inspection agency" means an agency that employs or contracts with individuals who perform elevated blood lead (EBL) inspections. Elevated blood lead (EBL) inspection agencies may also employ or contract with individuals who perform other lead-based paint activities.

"Emergency renovation" means renovation, remodeling, or repainting activities necessitated by nonroutine failures of equipment or of a structure that were not planned but resulted from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard or threatens equipment or property with significant damage. "Emergency renovation" includes interim controls, renovation, remodeling, or repainting activities that are conducted in response to an elevated blood lead (EBL) inspection.

"Encapsulant" means a substance that forms a barrier between lead-based paint and the environment using a liquid-applied coating (with or without reinforcement materials) or an adhesively bonded coating material.

"Encapsulation" means the application of an encapsulant.

"Enclosure" means the use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment.

"Firm" means a company, partnership, corporation, sole proprietorship, individual doing business, association, or other business entity; a federal, state, tribal, or local government agency; or a nonprofit organization that performs or offers to perform lead-based paint activities.

"Friction surface" means an interior or exterior surface that is subject to abrasion or friction including, but not limited to, certain window, floor, and stair surfaces.

"Guest instructor" means an individual designated by the training program manager or principal instructor to provide instruction specific to the lecture, hands-on work activities, or work practice components of a course.

"Hands-on skills assessment" means an evaluation which tests the trainees' ability to satisfactorily perform the work practices and procedures identified in 641—70.6(135), as well as any other skill taught in a training course.

"Hazardous lead-based paint" means lead-based paint that is present on a friction surface where there is evidence of abrasion or where the dust-lead level on the nearest horizontal surface underneath the friction surface (e.g., the windowsill or floor) is greater than or equal to the dust-lead hazard level, lead-based paint that is present on an impact surface that is damaged or otherwise deteriorated from impact, lead-based paint that is present on a chewable surface, or any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

"Hazardous waste" means any waste as defined in 40 CFR 261.3.

"HEPA exhaust control" means a HEPA vacuum attached to the machine in such a manner that it captures the air, dust, and debris disturbed by the machine.

"HEPA vacuum" means a vacuum cleaner which has been designed, operated, and maintained with a high-efficiency particulate air (HEPA) filter as the last filtration stage. A HEPA filter is a filter that is capable of capturing particles of 0.3 microns with 99.97 percent efficiency. The vacuum cleaner must be designed, operated, and maintained so that all of the air drawn into the machine is expelled through the HEPA filter with none of the air leaking past it. A vacuum must have sufficient suction to capture the dust that must be collected. A vacuum that complies with ANSI/IESO Standard 4310-2009 for Portable High Efficiency Air Filtration Device Field Testing and Validation Standard as a Class 3, 4, or 5 device is considered a HEPA vacuum.

"Housing for the elderly" means retirement communities or similar types of housing reserved for households composed of one or more persons 62 years of age or older or an age recognized as elderly by a specific federal housing assistance program.

"Immediate family" means spouse, parents and grandparents, children and grandchildren, brothers and sisters, mother-in-law and father-in-law, brothers-in-law and sisters-in-law, daughters-in-law and sons-in-law, and adopted and step family members.

"Impact surface" means an interior or exterior surface that is subject to damage by repeated sudden force such as certain parts of door frames.

"Inconclusive classification" means any XRF reading falling within the inconclusive range on the performance characteristic sheet, including the boundary values defining the range.

"Interim controls" means a set of measures designed to temporarily reduce human exposure or likely exposure to lead-based paint hazards, including repairing deteriorated lead-based paint, specialized cleaning, maintenance, painting, temporary containment, ongoing monitoring of lead-based paint hazards or potential hazards, and the establishment and operation of management and resident education programs.

"Interior windowsill" means the portion of the horizontal window ledge that protrudes into the interior of the room.

"Lead abatement" means any measure or set of measures designed to permanently eliminate lead-based paint hazards in a residential dwelling or child-occupied facility. Lead abatement includes, but is not limited to, (1) the removal of lead-based paint and dust-lead hazards, the permanent enclosure or encapsulation of lead-based paint, the replacement of lead-painted surfaces or fixtures, and the removal or covering of soil-lead hazards and (2) all preparation, cleanup, disposal, repainting or refinishing, and postabatement clearance testing activities associated with such measures. "Lead abatement" specifically includes projects for which there is a written contract or other documentation, which provides that an individual will be conducting lead abatement in or around a residential dwelling or child-occupied facility.

In addition, "lead abatement" includes, but is not limited to, (1) projects for which there is a written contract or other document, which provides that an individual will be conducting activities in or to a residential dwelling or child-occupied facility that shall result in or are designed to permanently eliminate lead-based paint hazards, (2) projects resulting in the permanent elimination of lead-based paint hazards that are conducted by firms or individuals certified under 641—70.5(135), (3) projects resulting in the permanent elimination of lead-based paint hazards that are conducted by firms or individuals who, through their company name or promotional literature, represent, advertise, or hold themselves out to be in the business of performing lead abatement, and (4) projects resulting in the permanent elimination of lead-based paint that are conducted in response to a lead abatement order. However, in the case of items (1) through (4) of this definition, "lead abatement" does not include renovation, remodeling, landscaping, or other activities, when such activities are not designed to permanently eliminate lead-based paint hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling, even though these activities may incidentally result in a reduction or elimination of lead-based paint hazards. Furthermore, "lead abatement" does not include interim controls, operations and maintenance activities, renovation, or other measures and activities designed to temporarily, but not permanently, reduce lead-based paint hazards.

"Lead-based paint" means paint or other surface coatings that contain lead greater than or equal to 1.0 milligram per square centimeter or greater than 0.5 percent by weight. Lead-based paint is present on any surface that is tested and found to contain lead greater than or equal to 1.0 milligram per square centimeter or greater than 0.5 percent by weight and on any surface like a surface tested in the same room equivalent that has a similar painting history and that is found to be lead-based paint.

"Lead-based paint activities" means, in the case of target housing and child-occupied facilities, lead-free inspection, lead inspection, elevated blood lead (EBL) inspection, lead hazard screen, risk assessment, lead abatement, visual risk assessment, clearance testing conducted after lead abatement, clearance testing conducted after renovation, clearance testing conducted after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, and renovation.

"Lead-based paint hazard" means hazardous lead-based paint, a dust-lead hazard, or a soil-lead hazard.

"Lead-based paint hazard reduction activity" means an activity that permanently or temporarily reduces or eliminates lead-based paint hazards. "Lead-based paint hazard reduction activity" includes lead abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

"Lead-free inspection" means an inspection to determine whether a single dwelling unit or multifamily housing is free of lead-based paint and qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint and the provision of

a written report explaining the results of the lead-free inspection and options for reducing lead-based paint hazards to the property owner and to the person requesting the lead inspection.

"Lead hazard screen" means a limited risk assessment activity that involves limited paint and dust sampling and the provision of a written report explaining the results of the lead hazard screen to the property owner and to the person requesting the lead hazard screen.

"Lead inspection" means a surface-by-surface investigation to determine the presence of lead-based paint and a determination of the existence, nature, severity, and location of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the investigation and options for reducing lead-based paint hazards to the property owner and to the person requesting the lead inspection. A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall not determine that a residential dwelling is free of lead-based paint as a result of a lead inspection.

"Lead professional" means a person who conducts lead abatement, renovation, lead inspections, elevated blood lead (EBL) inspections, lead hazard screens, risk assessments, visual risk assessments, clearance testing after lead abatement, clearance testing after renovation, or clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

"Lead-safe work practices" means methods that are used to minimize hazards when conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35.

"Lead-safe work practices training program" means an 8-hour training program that provides training on how to work safely with lead-based paint.

"Living area" means any area of a residential dwelling used by at least one child under the age of six years, including, but not limited to, living rooms, kitchen areas, dens, playrooms, and children's bedrooms.

"Loading" means the quantity of a specific substance present per unit of surface area, such as the amount of lead in micrograms contained in the dust collected from a certain surface area divided by the surface area in square feet or square meters.

"Mid-yard" means an area of a residential yard approximately midway between the dripline of a residential building and the nearest property boundary or between the driplines of a residential building and another building on the same property.

"Minor repair and maintenance activities" means activities, including minor heating, ventilation or air-conditioning work, electrical work, and plumbing, that disrupt less than the minimum areas of a painted surface established in this definition where none of the work practices prohibited or restricted by this chapter are used and where the work does not involve window replacement or demolition of painted surface areas. When painted components or portions of painted components are removed, the entire surface area removed is the amount of painted surface disturbed. Projects, other than emergency renovation, performed in the same room within the same 30 days must be considered the same project for the purpose of determining whether the project is a minor repair and maintenance activity. Renovations performed in response to an elevated blood lead (EBL) inspection are not considered minor repair and maintenance activities. The minimum area for minor repair and maintenance activities is:

1. Less than 1.0 square foot of an interior painted or finished wood surface per renovation;
2. Less than 6.0 square feet of a painted or finished drywall or plaster surface per room; or
3. Less than 20.0 square feet of an exterior painted or finished surface per renovation.

Projects performed pursuant to 24 CFR Part 35 shall comply with the de minimis levels in 24 CFR 35.1350 if these de minimis levels are more restrictive than the minimum areas of a painted surface established in this definition.

"Multifamily dwelling" means a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or in part, as the home or residence of one or more persons.

"Multifamily housing" means one or more multifamily dwellings that are under the same ownership or management.

"Negative classification" means any value defined by the performance characteristics sheet as indicating that lead-based paint is not present.

"NIST 1.02 standard film" means the National Institute of Standards and Technology 1.02 milligrams of lead per square centimeter standard reference material. If the specific 1.02 milligrams of lead per square centimeter standard is not available from NIST, then the lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the closest available standard from NIST (1.0X).

"Occupant protection plan" means a plan developed by a certified lead abatement contractor prior to the commencement of lead abatement in a residential dwelling or child-occupied facility that describes the measures and management procedures that will be taken during lead abatement to protect the building occupants from exposure to any lead-based paint hazards.

"Ongoing lead-based paint maintenance" means the maintenance of housing pursuant to 24 CFR Part 35.

"Painted component" means a component or building component that is at least partially covered with paint or other surface coating.

"Paint-lead hazard" means the presence of hazardous lead-based paint in a residential dwelling or a child-occupied facility.

"Paint sample" means a sample collected in a representative location using ASTM E1729, "Standard Practice for Field Collection of Dried Paint Samples for Lead Determination by Atomic Spectrometry Techniques," or equivalent method.

"Paint stabilization" means repairing any physical defect in the substrate of a painted surface that is causing paint deterioration, removing loose paint and other material from the surface to be treated, and applying a new protective coating or paint pursuant to 24 CFR Part 35.

"Paint testing" means the process of determining the presence or the absence of lead-based paint on a specific component or surface. Paint testing shall only be conducted by certified lead inspector/risk assessors or certified elevated blood lead (EBL) inspector/risk assessors using approved methods for testing. Approved methods for paint testing are XRF analysis and laboratory analysis.

"Performance characteristics sheet (PCS)" means an information sheet developed by the U.S. Environmental Protection Agency and U.S. Department of Housing and Urban Development that defines acceptable operating specifications and procedures for a specific model of X-ray fluorescence analyzer (XRF). The PCS contains information about XRF readings taken on specific substrates, calibration check tolerances, interpretation of XRF readings, and other aspects of the model's performance.

"Permanently covered soil" means soil which has been separated from human contact by the placement of a barrier consisting of solid, relatively impermeable materials, such as pavement or concrete. Grass, mulch, and other landscaping materials are not considered permanent covering.

"Play area" means an area of frequent soil contact by children of less than six years of age as indicated by, but not limited to, factors including the following: the presence of play equipment (sandboxes, swing sets, and sliding boards), toys, or other children's possessions, observations of play patterns, or information provided by parents, residents, caregivers, or property owners.

"Positive classification" means any value defined by the performance characteristics sheet as indicating the presence of lead-based paint.

"Postrenovation cleaning verification" means the use of a wet or dry disposable cleaning cloth to wipe the interior windowsill, window trough, uncarpeted floor, and countertops of the renovation work area and the comparison of the cloth to a cleaning verification card to determine if the work area has been adequately cleaned.

"Principal instructor" means the individual who has the primary responsibility for organizing and teaching a particular course.

"Random selection" means a method of choosing residential dwellings from multifamily housing consisting of similarly constructed and maintained residential dwellings such that each residential dwelling has an equal chance of being selected.

"Recognized laboratory" means an environmental laboratory recognized by the U.S. Environmental Protection Agency pursuant to Section 405(b) of the federal Toxic Substance Control Act as capable of performing an analysis for lead compounds in paint, soil, and dust.

"Recognized test kit" means a commercially available kit recognized by the EPA under 40 CFR 745.88 as being capable of allowing a user to determine the presence of lead at levels equal to or in excess of 1.0 milligrams per square centimeter, or more than 0.5 percent by weight, in a paint chip, paint, powder, or painted surface.

"Reduction" means measures designed to reduce or eliminate human exposure to lead-based paint hazards through methods including interim controls and lead abatement.

"Reevaluation" means a visual assessment of painted surfaces and limited dust and soil sampling conducted periodically following a lead-based paint hazard reduction activity where lead-based paint is still present and the provision of a written report explaining the results of the reevaluation.

"Refresher training course" means a course taken by a certified lead professional to maintain certification in a particular discipline.

"Regulated entity" means any lead professional or firm that is regulated by the department by virtue of these rules, the Iowa Code, certification documents, approval documents, lead abatement notices, or other official regulatory promulgation.

"Rehabilitation" means the improvement of an existing structure through alterations, incidental additions, or enhancements. Rehabilitation includes repairs necessary to correct the results of deferred maintenance, the replacement of principal fixtures and components, improvements to increase the efficient use of energy, and installation of security devices.

"Renovation" means the modification of any existing structure, or portion thereof, that results in the disturbance of painted surfaces, unless that activity is performed as part of lead abatement as defined by this chapter. The term "renovation" includes, but is not limited to, the removal, modification, or repair of painted surfaces or painted components such as modification of painted doors, surface restoration, and window repair; surface preparation activity such as sanding, scraping, or other such activities that may generate paint dust; the partial or complete removal of building components such as walls, ceilings, and windows; weatherization projects such as cutting holes in painted surfaces to install blown-in insulation or to gain access to attics and planing thresholds to install weatherstripping; and interim controls that disturb painted surfaces. "Renovation" does not include minor repair and maintenance activities.

"Residential building" means a building containing one or more residential dwellings.

"Residential dwelling" means (1) a detached single-family dwelling unit, including the surrounding yard, attached structures such as porches and stoops, and detached buildings and structures including, but not limited to, garages, farm buildings, and fences, or (2) a single-family dwelling unit in a structure that contains more than one separate residential dwelling unit, which is used or occupied, or intended to be used or occupied, in whole or part, as the home or residence of one or more persons.

"Risk assessment" means an investigation to determine the existence, nature, severity, and location of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the investigation and options for reducing lead-based paint hazards to the property owner and to the person requesting the risk assessment.

"Room" means a separate part of the inside of a building, such as a bedroom, living room, dining room, kitchen, bathroom, laundry room, or utility room. To be considered a separate room, the room must be separated from adjoining rooms by built-in walls or archways that extend at least six inches from an intersecting wall. Half walls or bookcases count as room separators if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls. A screened-in porch that is used as a living area is a room. Each exterior side of the house is considered a separate room.

"Soil-lead hazard" means bare soil on residential real property or on the property of a child-occupied facility that contains total lead greater than or equal to 400 parts per million for the dripline, mid-yard, and play areas. A soil-lead hazard is present in a dripline, mid-yard, or play area when the soil-lead concentration from a composite sample of bare soil is greater than or equal to 400 parts per million.

"Soil sample" means a sample collected in a representative location using ASTM E1727, "Standard Practice for Field Collection of Soil Samples by Atomic Spectrometry Techniques," or equivalent method.

"Standard treatments" means a series of hazard reduction measures designed to reduce all lead-based paint hazards in a residential dwelling without the benefit of a risk assessment or other evaluation pursuant to 24 CFR Part 35. Standard treatments consist of the stabilization of all deteriorated interior and exterior paint, the provision of smooth and cleanable horizontal hard surfaces, the correction of dust-generating conditions (i.e., conditions causing rubbing, binding, or crushing of surfaces known to or presumed to be coated with lead-based paint), and the treatment of bare soil to control known or presumed soil-lead hazards.

"State certification examination" means a discipline-specific examination approved by the department to test the knowledge of a person who has completed an approved training course and is applying for certification in a particular discipline. The state certification examination may not be administered by the provider of an approved course.

"Substrate" means the material underneath the paint or finish on a surface. Substrates are classified as brick, concrete, drywall, metal, plaster, or wood.

"Substrate correction" means adjustments that must be made to readings obtained from some X-ray fluorescence analyzers to correct for systematic biases due to interference from the substrate beneath the paint.

"Substrate correction value" means the value that is used to adjust readings obtained from some X-ray fluorescence analyzers to correct for systematic biases due to interference from the substrate beneath the paint.

"Targeted selection" means selecting residential dwellings from multifamily housing for risk assessments or lead hazard screens using information supplied by the property owner.

"Target housing" means housing constructed prior to 1978 with the exception of housing for the elderly or for persons with disabilities and housing which does not contain a bedroom, unless at least one child under the age of six years resides or is expected to reside in the housing for the elderly or persons with disabilities or housing which does not contain a bedroom. Target housing also includes any nonresidential building where lead-based paint activities are conducted prior to or during the conversion of the nonresidential building to target housing.

"Testing combination" means the unique combination of the room, component, substrate, and distinct painting history.

"Training hour" means at least 50 minutes of actual learning, including, but not limited to, time devoted to lecture, learning activities, small group activities, demonstrations, evaluations, or hands-on experience.

"Training manager" means the individual responsible for administering an approved course and monitoring the performance of principal instructors and guest instructors.

"Training program" means a person or organization sponsoring a lead professional training course(s).

"Visual inspection for clearance testing" means the visual examination of a residential dwelling or a child-occupied facility following lead abatement or following interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR 35.1340 to determine whether or not the lead abatement, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation has been successfully completed.

"Visual risk assessment" means a visual assessment to determine the presence of deteriorated paint or other potential sources of lead-based paint hazards in a residential dwelling or child-occupied facility and the provision of a written report explaining the results of the assessment to the property owner and to the person requesting the visual risk assessment. For the purpose of compliance with this chapter, housing quality standards inspections conducted in housing owned by a public housing authority and housing that is receiving tenant-based rental assistance from a public housing authority are not considered visual risk assessments.

"Weighted arithmetic mean" means the arithmetic mean of sample results weighted by the number of subsamples in each sample. Its purpose is to give influence to a sample relative to the surface area it represents. A single surface dust sample is comprised of a single dust subsample. A composite dust sample may contain from two to four dust subsamples of the same area as each other and of each single

surface dust sample in the composite. The weighted arithmetic mean is obtained by summing, for all dust samples, the product of the dust sample's result multiplied by the number of dust subsamples in the dust sample, and dividing the sum by the total number of dust subsamples contained in all dust samples. For example, the weighted arithmetic mean of a single surface dust sample containing 60 micrograms per square foot (μg/ft^2), a composite dust sample (three dust subsamples) containing 100 μg/ft^2, and a composite dust sample (four dust subsamples) containing 110 μg/ft^2 is 100 μg/ft^2. This result is based on the equation [60+(3×100)+(4×110)] / (1+3+4).

"Wet disposable cleaning cloth" means a commercially available, premoistened white disposable cloth designed to be used for cleaning hard surfaces such as uncarpeted floors or countertops.

"Wet mopping system" means a device with the following characteristics: a long handle, a mop head designed to be used with disposable absorbent cleaning pads, a reservoir for cleaning solution, and a built-in mechanism for distributing or spraying the cleaning solution onto a floor, or a method of equivalent efficiency.

"Wet sanding" means a process of removing loose paint in which a surface that is partially coated with paint or other surface coating is kept wet or moist during sanding to minimize the dispersal of paint chips and airborne dust.

"Wet scraping" means a process of removing loose paint in which a surface that is partially coated with paint or other surface coating is kept wet or moist during scraping to minimize the dispersal of paint chips and airborne dust.

"Windowsill" means the portion of the horizontal window ledge that protrudes into the interior of the room when the window is closed.

"Window trough" means, for a typical double-hung window, the portion of the exterior windowsill between the interior windowsill (or stool) and the frame of the storm window. If there is no storm window, the window trough is the area that receives both the upper and lower window sashes when they are both lowered. The window trough is sometimes referred to as the window well.

"Wipe sample" means a sample collected by wiping a representative surface of known area, as determined by ASTM E1728, "Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques," or equivalent method, with an acceptable wipe material as defined in ASTM E1792, "Standard Specification for Wipe Sampling Materials for Lead in Surface Dust." The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches.

"Worksite" or *"work area"* means an interior or exterior area where lead-based paint hazard reduction activity or renovation takes place. There may be more than one worksite in a dwelling unit or at a residential property.

"Worst case selection" means conducting a walk-through survey of all residential dwellings in the multifamily housing to select the highest-risk residential dwellings for risk assessments or lead hazard screens.

"X-ray fluorescence analyzer (XRF)" means an instrument that determines lead concentrations in milligrams per square centimeter (mg/cm^2) using the principle of X-ray fluorescence.

"XRF reading" means the number obtained when a surface is tested with an X-ray fluorescence analyzer.

[**ARC 8502B**, IAB 2/10/10, effective 1/13/10; **ARC 0482C**, IAB 12/12/12, effective 1/16/13]

641—70.3(135) Lead professional certification. A person or a firm shall not conduct lead abatement, clearance testing after lead abatement, lead-free inspections, lead inspections, elevated blood lead (EBL) inspections, lead hazard screens, risk assessments, visual risk assessments, clearance testing after renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 unless the person or firm has been certified by the department in the appropriate discipline. Beginning April 22, 2010, a person or firm shall not conduct renovation unless the person or firm has been certified by the department in the appropriate discipline. However, persons who perform these activities within residential dwellings that they own

are not required to be certified, unless the residential dwelling is occupied by a person other than the owner or a member of the owner's immediate family while these activities are being performed. In addition, elevated blood lead (EBL) inspections shall be conducted only by certified elevated blood lead (EBL) inspector/risk assessors employed by or under contract with a certified elevated blood lead (EBL) inspection agency. In addition, persons who perform renovation under the supervision of a certified lead-safe renovator, certified lead abatement contractor, or certified lead abatement worker and who have completed on-the-job training are not required to be certified. However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR Part 35. Lead professionals and firms shall not state that they have been certified by the state of Iowa unless they have met the requirements of 641—70.5(135) and been issued a current certificate by the department. Elevated blood lead (EBL) inspection agencies must be certified by the department. Elevated blood lead (EBL) inspection agencies shall not state that they have been certified by the state of Iowa unless they have met the requirements of 641—70.5(135) and been issued a current certificate by the department.
[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.4(135) Course approval and standards. All lead professional training courses for initial certification and refresher training must be approved by the department. Training programs shall not state that they have been approved by the state of Iowa unless they have met the requirements of 641—70.4(135) and been issued a letter of approval by the department. Lead-safe work practices training programs that were approved by the department prior to January 13, 2010, must reapply for approval.

70.4(1) Training courses shall meet the following requirements:

a. The training program offering the course shall employ a training manager who has the following qualifications:

(1) A bachelor's or graduate degree in building construction technology, engineering, industrial hygiene, safety, public health, or a related field; or two years of experience in managing a training program specializing in environmental hazards.

(2) Demonstrated experience, education, or training in lead professional activities, including lead inspection, lead abatement, lead-safe work practices, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

b. The training manager shall designate a qualified principal instructor for each course who has the following qualifications:

(1) Demonstrated experience, education, or training in teaching workers or adults.

(2) Certification as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, or lead abatement contractor. In the case of a course for training lead-safe renovators, the principal instructor may be certified as a sampling technician.

(3) Demonstrated experience, education, or training in lead professional activities, including lead inspection, lead abatement, lead-safe work practices, painting, carpentry, renovation, remodeling, occupational safety and health, or industrial hygiene.

c. The principal instructor shall be responsible for the organization of the course and oversight of the teaching of all course material. The training manager may designate guest instructors as needed to provide instruction specific to the lecture, hands-on activities, or work practice components of a course.

d. The training program shall ensure the availability of, and provide adequate facilities for, the delivery of the lecture, course test, hands-on training, and assessment activities. This includes providing training equipment that reflects current work practices and maintaining or updating the equipment as needed.

e. The training manager shall maintain the validity and integrity of the hands-on skills assessment to ensure that it accurately evaluates the trainees' performance of the work practices and procedures associated with the course topics contained in subrules 70.4(3) to 70.4(17).

f. The training manager shall maintain the validity and integrity of the course test to ensure that it accurately evaluates the trainees' knowledge and retention of the course topics.

g. The course test shall be developed in accordance with the test blueprint submitted with the course approval application. Training programs may use course tests developed by the department.

h. The training program shall issue unique course completion certificates to each individual who passes the course. The course completion certificate shall be issued in color. The course completion certificate shall include:

(1) The name and address of the individual, a photograph of the individual, and a unique identification number.

(2) The name of the particular course that the individual completed and the course length in hours.

(3) Dates of course completion and test passage.

(4) The name, address, and telephone number of the training program.

(5) The signature of the training manager.

i. The training manager shall develop and implement a quality control plan. The plan shall be used to maintain and improve the quality of the training program over time. This plan shall contain at least the following elements:

(1) Procedures for periodic revision of training materials and the course test to reflect changes in regulations and recommended practices.

(2) Procedures for the training manager to conduct an annual review of the competency of the principal instructor and all other instructors.

j. The training program shall offer courses that teach the work practice standards for conducting lead-based paint activities contained in 641—70.6(135) and other standards developed by the department. These standards shall be taught in the appropriate courses to provide trainees with the knowledge needed to perform the lead-based paint activities they are responsible for conducting.

k. The training manager shall ensure that each course meets the requirements in this rule for the number of training hours and hours of hands-on training. The training manager shall ensure that any student who misses more than 20 minutes of class time makes up the time before taking the course test.

l. The training manager shall ensure that the training program complies at all times with all requirements in this rule.

m. The training manager shall allow the department to audit the training program to verify the contents of the application for approval and for reapproval.

n. The training program shall maintain, and make available to the department, upon request, the following records:

(1) All documents specified in paragraph 70.4(2)*"f."*

(2) Current curriculum/course materials and documents reflecting any changes made to these materials.

(3) The course test blueprint and the course test.

(4) Information regarding how the hands-on assessment is conducted including, but not limited to, who conducts the assessment, how the skills are graded, what facilities are used, and the pass/fail rate.

(5) The quality control plan as described in paragraph 70.4(1)*"i."*

(6) A file for each student who has completed a course. Each student file shall contain the following:

1. The student's name, address, and telephone number.
2. The student's test and answer sheet.
3. A copy of the student's course completion certificate.
4. A copy of the student's hands-on skill assessment, if applicable.
5. A photograph of the student as taken by the training program.

(7) A file for each individual course that has been offered. Each file shall include the following:

1. The dates of the course.
2. The location of the course.
3. The instructors who taught the course.
4. A paper or electronic copy of the curriculum used for the course.
5. A copy of the test used for the course.
6. Documentation of the times that each student was present at the course, including documentation of how a student made up missed time.

7. The course evaluations.

(8) Any other materials that have been submitted to the department as part of the program's application for approval.

o. The training program shall retain all required records at the address specified on the training program approval application for a minimum of six years.

p. The training program shall notify the department in writing within 30 days of changing the address specified on its training program approval application or transferring the records from that address.

q. A training program shall notify the department in writing at least 7 days in advance of offering an approved course. The notification shall include the date(s), time(s), and location(s) where the approved course will be held. A training program shall notify the department at least 24 hours in advance of canceling an approved course.

r. The training program shall take a digital photograph of each student. The digital photograph shall be the same photograph that appears on the training certificate and is submitted to the department. The photograph shall meet the following specifications:

(1) The individual shall be facing the camera.

(2) The individual's head shall not be tilted.

(3) The individual's head shall cover approximately half of the photo area.

(4) The individual shall be in front of a neutral or light-colored background.

(5) The individual shall not wear any items that detract from the face, such as hats or sunglasses. Only head coverings worn for religious reasons may be worn. Religious head coverings may not cover the face of the individual.

(6) Photographs shall be 24-bit color depth.

s. A training program shall provide the following information to the department electronically in a format specified by the department within 30 days of the conclusion of an approved course for each student who has taken the approved course:

(1) Name, address, and social security number.

(2) Course completion certificate number.

(3) Test score.

(4) The photograph of each student as taken by the training program shall be submitted as a joint photographic experts group (JPEG) file with a size of at least two inches by two inches and a minimum resolution of 300 pixels per inch.

70.4(2) If a training program desires approval of a course by the department, the training program shall apply to the department for approval of the course at least 90 days before the initial offering of the course if the training program will use materials developed by the training program. If the training program will use materials developed by the department, the training program shall apply to the department for approval of the course at least 30 days before the initial offering of the course. The department may allow courses to be offered sooner if the department completes the approval in less than 30 days. The application shall include:

a. Training program name, contact person, address, and telephone number.

b. Course dates and times.

c. Course location, including a description of the facilities and equipment to be used for lecture and hands-on training.

d. Course agenda, including approximate times allotted to each training segment.

e. A copy of each reference material, text, student and instructor manuals, and audio-visual material used in the course. These materials may also be provided by the department.

f. The name(s) and qualifications of the training manager, principal instructor(s), and guest instructor(s). The following documents shall be submitted as evidence that training managers and principal instructors have the education, work experience, training requirements, or demonstrated experience required by subrule 70.4(1):

(1) Official transcripts or diplomas as evidence of meeting the education requirements.

(2) Résumés, letters of reference, or documentation of work experience, as evidence of meeting the work experience requirements.

(3) Certificates from lead-specific training courses, as evidence of meeting the training requirements.

g. A copy of the course test blueprint. The course test may also be provided by the department.

h. A description of the activities and procedures that will be used for conducting the assessment of hands-on skills for each course.

i. Maximum class size.

j. A copy of the quality control plan for the course.

k. A nonrefundable fee of $200.

70.4(3) To be approved for the training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors, a course must be at least 40 training hours with a minimum of 12 hours devoted to hands-on training activities. Lead inspector/risk assessor and elevated blood lead (EBL) inspector/risk assessor training courses shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of an inspector/risk assessor.

b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.

d. Lead-based paint inspection methods, including selection of rooms and components for sampling or testing to determine if a property is free of lead-based paint as specified in the Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1995, U.S. Department of Housing and Urban Development), and methods to determine if lead-based paint hazards are present in a property.*

e. Paint, dust, and soil sampling methodologies.*

f. Clearance standards and testing, including random sampling.*

g. Collection of background information to perform a risk assessment.

h. Sources of environmental lead contamination such as paint, surface dust and soil, and water.

i. Visual inspection to identify lead-based paint hazards.*

j. Lead hazard screen protocol.

k. Visual risk assessment protocol.

l. Reevaluation protocol.

m. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint.*

n. In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.*

o. Sampling for other sources of lead exposure.*

p. Interpretation of lead-based paint and other lead sampling results, including all applicable federal, state, and local guidance or regulations pertaining to lead-based paint hazards.*

q. Development of lead hazard control options.

r. The role of interim controls, operation and maintenance activities, and renovation in reducing lead-based paint hazards.

s. Approved methods for conducting lead-based paint abatement, interim controls, operation and maintenance activities, and renovation.

t. Prohibited methods for conducting lead-based paint abatement, interim controls, operation and maintenance activities, and renovation.

u. Interior dust abatement and cleanup.

v. Soil and exterior dust abatement and cleanup.

w. Preparation of the final reports for lead inspections, lead-free inspections, risk assessments, visual assessments, lead hazard screens, clearance testing after lead abatement, clearance testing after

renovation, reevaluation, and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35.

x. Record keeping.

y. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

z. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

aa. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(4) To be approved for the training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors who have already completed an approved sampling technician course, a course must be at least 20 training hours with a minimum of 8 hours devoted to hands-on training activities. The training course shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead inspector/risk assessor and elevated blood lead (EBL) inspector/risk assessor.

b. Lead-based paint inspection methods, including selection of rooms and components for sampling or testing to determine if a property is free of lead-based paint as specified in the work practice standards in 641—70.6(135), and methods to determine if lead-based paint hazards are present in a property.*

c. Collection of background information to perform a risk assessment.

d. Lead hazard screen protocol.

e. Reevaluation protocol.

f. Sampling for other sources of lead exposure.*

g. Interpretation of lead-based paint and other lead sampling results, including all applicable federal, state, and local guidance or regulations pertaining to lead-based paint hazards.*

h. Development of lead hazard control options, including lead abatement.*

i. The role of interim controls, operation and maintenance activities, and renovation in reducing lead-based paint hazards.

j. Approved methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

k. Prohibited methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

l. Preparation of the final reports for lead inspections, lead-free inspections, risk assessments, lead hazard screens, reevaluation, and clearance testing after lead abatement.

m. Record keeping.

n. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

o. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

p. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(5) Rescinded IAB 3/31/04, effective 5/5/04.

70.4(6) Rescinded IAB 3/31/04, effective 5/5/04.

70.4(7) Rescinded IAB 3/31/04, effective 5/5/04.

70.4(8) To be approved for the training of lead abatement contractors, a course must be at least 40 training hours with a minimum of 12 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead abatement contractor.

b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.

d. Liability and insurance issues relating to lead abatement, interim controls, and renovation.

e. Identification of lead-based paint and lead-based paint hazards.*

f. Interpretation of lead inspection reports.*

g. Development and implementation of an occupant protection plan, lead abatement report, and renovation report.

h. Respiratory protection and protective clothing.*

i. Employee information and training.

j. Approved methods for conducting lead abatement, interim controls, and renovation.*

k. Prohibited methods for conducting lead abatement, interim controls, and renovation.

l. Interior dust abatement and cleanup.*

m. Soil and exterior dust abatement and cleanup.*

n. Clearance standards and testing, including random sampling.

o. Cleanup, waste handling, and waste disposal.

p. In the case of renovation, interior and exterior containment and cleanup methods.*

q. In the case of renovation, providing on-the-job training to other workers.*

r. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.*

s. In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.*

t. In the case of renovation, record preparation and record keeping.

u. Record keeping for lead abatement.

v. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

w. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

x. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(9) To be approved for the training of lead abatement contractors who have already completed an approved lead abatement worker course, a course must be at least 16 training hours with a minimum of 4 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead abatement contractor.

b. Liability and insurance issues relating to lead abatement.

c. Interpretation of lead inspection reports.*

d. Development and implementation of an occupant protection plan and abatement report.

e. Employee information and training.

f. Clearance standards and testing, including random sampling.

g. Record keeping for lead abatement.

h. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

i. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and with information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

j. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(10) To be approved for the training of lead abatement workers, a course must be at least 24 training hours with a minimum of 8 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead abatement worker.

b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.

d. Identification of lead-based paint and lead-based paint hazards.*

e. Approved methods for conducting lead abatement, interim controls, and renovation.*

f. Prohibited methods for conducting lead abatement, interim controls, and renovation.

g. Interior dust abatement and cleanup.*

h. Soil and exterior dust abatement and cleanup.*

i. Cleanup, waste handling, and waste disposal.

j. Respiratory protection and protective clothing.*

k. Personal hygiene.

l. In the case of renovation, interior and exterior containment and cleanup methods.*

m. In the case of renovation, providing on-the-job training to other workers.*

n. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.*

o. In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.*

p. In the case of renovation, record preparation and record keeping.

q. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

r. The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

s. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(11) To be approved for the training of sampling technicians, a course must be at least 20 training hours with a minimum of 4 hours devoted to hands-on training activities. The training course shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a sampling technician.

b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.

d. Methods of conducting visual risk assessments.*

e. Paint, dust, and soil sampling methodologies.*

f. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint.*

g. Clearance standards and testing.*

h. Identification of lead-based paint hazards.*

i. Sources of environmental lead contamination such as paint, surface dust and soil, and water.

j. Visual inspection to identify lead-based paint hazards.*

k. Approved methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

l. Prohibited methods for conducting lead abatement, interim controls, operation and maintenance activities, and renovation.

m. Methods of interim controls and lead abatement for interior dust and cleanup.

n. Methods of interim controls and lead abatement for exterior dust and soil and cleanup.

o. Preparation of the final visual assessment report.

p. Preparation of clearance testing reports for clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35.

q. Record keeping.

r. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

s. The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

t. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(12) To be approved for the training of project designers, a course must be at least 48 instructional training hours with a minimum of 12 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead abatement contractor.

b. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

c. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint and lead-based paint activities.

d. Liability and insurance issues relating to project design.

e. Identification of lead-based paint and lead hazards.*

f. Interpretation of lead inspection reports.*

g. Development and implementation of an occupant protection plan, lead abatement report, and renovation report.

h. Respiratory protection and protective clothing.*

i. Employee information and training.

j. Approved methods for conducting lead abatement, interim controls, and renovation.*

k. Prohibited methods for conducting lead abatement, interim controls, and renovation.

l. Interior dust abatement and cleanup.*

m. Soil and exterior dust abatement and cleanup.*

n. Clearance standards and testing, including random sampling.

o. Cleanup, waste handling, and waste disposal.

p. In the case of renovation, providing on-the-job training to other workers.*

q. In the case of renovation, procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.*

r. In the case of renovation, methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.*

s. In the case of renovation, record preparation and record keeping.

t. Record keeping for lead abatement.

u. Role and responsibilities of a project designer.

v. Development and implementation of an occupant protection plan for large-scale lead abatement projects.

w. Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.

x. Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.

y. Clearance standards and testing for large-scale lead abatement projects.

z. Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.

aa. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

ab. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and with information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

ac. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(13) To be approved for the training of project designers who have already completed an approved lead abatement contractor course, a course must be at least 8 instructional training hours and shall cover at least the following subjects:

a. Role and responsibilities of a project designer.

b. Development and implementation of an occupant protection plan for large-scale abatement projects.

c. Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.

d. Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.

e. Clearance standards and testing for large-scale lead abatement projects.

f. Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.

g. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

h. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

i. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(14) To be approved for the training of project designers who have already completed an approved lead abatement worker course, a course must be at least 24 instructional training hours with a minimum of 4 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Role and responsibilities of a lead abatement contractor.

b. Liability and insurance issues relating to lead abatement.

c. Interpretation of lead inspection reports.*

d. Development and implementation of an occupant protection plan and lead abatement report.

e. Employee information and training.

f. Clearance standards and testing, including random sampling.

g. Record keeping.

h. Role and responsibilities of a project designer.

i. Development and implementation of an occupant protection plan for large-scale lead abatement projects.

j. Lead abatement and lead hazard reduction methods, including restricted practices for large-scale lead abatement projects.

k. Interior dust abatement/cleanup or lead hazard control and reduction methods for large-scale lead abatement projects.

l. Clearance standards and testing for large-scale lead abatement projects.

m. Integration of lead abatement methods with modernization and rehabilitation projects for large-scale lead abatement projects.

n. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

o. The instructor shall provide each student with instructions and forms needed to apply to the department for certification and information provided by the department regarding the state certification examination. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

p. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(15) To be approved for the training of lead-safe renovators, a course must be at least 8 instructional training hours with a minimum of 2 hours devoted to hands-on activities and shall cover at least the following subjects (requirements ending in an asterisk (*) indicate areas that require hands-on activities as an integral component of the course):

a. Background information on lead and its adverse health effects, how children and adults are exposed to lead, and how to prevent lead exposure in children and adults.

b. Background information on federal, state, and local regulations and guidance that pertain to lead-based paint, lead-based paint activities, and renovation activities.

c. Procedures for using recognized test kits to determine whether paint is lead-based paint, including preparation of the required report.*

d. Renovation methods to minimize the creation of dust and lead-based paint hazards.*

e. Prohibited methods of renovation.

f. Interior and exterior containment and cleanup methods.*

g. Methods to ensure that the renovation has been properly completed, including postrenovation cleaning verification and clearance testing.*

h. Waste handling and disposal.

i. Providing on-the-job training to other workers.*

j. Record preparation and record keeping.

k. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

l. The instructor shall provide each student with instructions and forms needed to apply to the department for certification. The instructor shall also provide each student with a current copy of this chapter and 641—Chapter 69.

m. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(16) To be approved for refresher training of sampling technicians, lead abatement contractors, lead abatement workers, and project designers, a course must be at least 8 training hours. To be approved for refresher training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors who completed an approved 24-hour training course, a course must be at least 8 training hours to meet the recertification requirements of subrule 70.5(3). To be approved for refresher training of lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors to meet the recertification requirements of subrule 70.5(6), a course must be at least 16 training hours. To be approved for refresher training of lead-safe renovators, a course must be at least 4 hours. All refresher training courses shall cover at least the following topics:

a. A review of the curriculum topics of the initial certification course for the appropriate discipline as listed in subrules 70.4(3) to 70.4(15).

b. An overview of current safety practices relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

c. Current laws and regulations relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

d. Current technologies relating to lead-based paint activities in general, as well as specific information pertaining to the appropriate discipline.

e. The course shall conclude with a course test and, if applicable, a hands-on skills assessment. The student must achieve a score of at least 80 percent on the examination and successfully complete the hands-on skills assessment to successfully complete the course. The student may take the course test no more than three times within six months of completing the course. If an individual does not pass the course test within six months of completing the course, the individual must retake the appropriate approved course.

f. All of the course materials including instructions, applications, and forms must be provided on paper unless an individual student requests that the materials be provided electronically.

70.4(17) Approvals of training courses shall expire three years after the date of issuance. The training manager shall submit the following at least 90 days prior to the expiration date for a course to be reapproved:

a. Sponsoring organization name, contact person, address, and telephone number.

b. A list of the courses for which reapproval is sought.

c. A description of any changes to the training staff, facility, equipment, or course materials since the approval of the training program.

d. A statement signed by the training manager stating that the training program complies at all times with 641—70.4(135).

e. A nonrefundable fee of $200.

70.4(18) The department shall consider a request for approval of a training course that has been approved by a state or tribe authorized by the U.S. Environmental Protection Agency.

a. The course shall be approved if it meets the requirements of 641—70.4(135).

b. If the course does not meet all of the requirements of 641—70.4(135), the department shall inform the training provider of additional topics and training hours that are needed to meet the requirements of 641—70.4(135).

[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.5(135) Certification, interim certification, and recertification.

70.5(1) A person wishing to become a certified lead professional shall apply on forms supplied by the department. The applicant must submit:

a. A completed application form.

b. A certificate of completion of an approved course for the discipline in which the applicant wishes to become certified.

c. If wishing to become a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor, documentation of successful completion of the manufacturer's training course or equivalent for the X-ray fluorescence (XRF) analyzer that the inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor will use to conduct lead inspections.

d. If wishing to become a certified elevated blood lead (EBL) inspector/risk assessor, documentation of successful completion of 8 hours of training from the department's childhood lead poisoning prevention program. This training shall cover the roles and responsibilities of an elevated blood lead (EBL) inspector/risk assessor and the environmental and medical case management of elevated blood lead (EBL) children.

e. Documentation that the applicant meets the additional experience and education requirements in subrule 70.5(2) for the discipline in which the applicant wishes to become certified. The following documents shall be submitted as evidence that the applicant has the education and work experience required by subrule 70.5(2):

(1) Official transcripts or diplomas as evidence of meeting the education requirements.

(2) Résumés, letters of reference, or documentation of work experience, as evidence of meeting the work experience requirements.

f. To become certified as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, or project designer, a certificate showing that the applicant has passed the state certification examination in the discipline in which the applicant wishes to become certified.

g. A $60 nonrefundable fee.

h. A person may receive interim certification from the department as a lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, or project designer by submitting the items required by paragraphs 70.5(1)*"a"* to *"e"* and *"g"* to the department. Interim certification shall expire six months from the date of completion of an approved course. An applicant shall upgrade an interim certification to a certification by submitting a certificate to the department showing that the applicant has passed the state certification examination as required by paragraph 70.5(1)*"f."* Interim certification is equivalent to certification.

i. Beginning April 22, 2010, lead-safe renovators must be certified by the department. A person who completed an approved course conducted by an approved lead-safe work practices training provider prior to January 13, 2010, must complete a lead-safe renovator refresher course to obtain certification.

70.5(2) To become certified by the department as a lead professional, an applicant must meet the education and experience requirements for the appropriate discipline:

a. Lead inspector/risk assessors and elevated blood lead (EBL) inspector/risk assessors must meet one of the following requirements:

(1) Bachelor's degree and one year of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(2) Associate's degree and two years of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(3) High school diploma and three years of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(4) Certification as an industrial hygienist, professional engineer, registered architect, registered sanitarian, registered environmental health specialist, or registered nurse.

b. Lead abatement contractors must meet one of the following requirements:

(1) One year of experience as a certified lead abatement worker.

(2) Two years of related experience or education (e.g., lead, housing inspection, building trades, property management and maintenance).

c. No additional education or experience is required for lead abatement workers.

d. Sampling technicians must meet one of the following requirements:

(1) Associate's degree.

(2) High school diploma and one year of related experience (e.g., lead, environmental health, public health, housing inspection, building trades).

(3) Certification as an industrial hygienist, professional engineer, registered architect, registered sanitarian, registered environmental health specialist, or registered nurse.

e. Project designers must meet one of the following requirements:

(1) Bachelor's degree in engineering, architecture, or a related profession, and one year of experience in building construction and design or a related field.

(2) Four years of experience in building construction and design or a related field.

f. No additional education or experience is required for lead-safe renovators.

70.5(3) and **70.5(4)** Reserved.

70.5(5) All agencies that perform or offer to perform elevated blood lead (EBL) inspections must be certified by the department. An agency wishing to become a certified elevated blood lead (EBL) inspection agency shall apply on forms supplied by the department. The agency must submit:

a. A completed application form.

b. Documentation that the agency has the authority to require the repair of lead hazards identified through an elevated blood lead (EBL) inspection.

c. Documentation that the agency employs or has contracted with a certified elevated blood lead (EBL) inspector/risk assessor to provide environmental case management of all elevated blood lead (EBL) children in the agency's service area, including follow-up to ensure that lead-based paint hazards identified as a result of elevated blood lead (EBL) inspections are corrected, and that lead-based paint activities will be conducted only by appropriately certified lead professionals. In addition, the agency must document that the agency and its employees or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.

d. A statement that the certified elevated blood lead (EBL) inspection agency will maintain all records required by subrule 70.6(10).

70.5(6) Individuals certified as lead professionals must be recertified each year. To be recertified, lead professionals must submit the following:

a. A completed application form.

b. A $60 nonrefundable fee.

c. Every three years, a certificate showing that the applicant has successfully completed an approved refresher training course for the appropriate discipline. The initial refresher training course must be completed no more than three years after the date on which the applicant completed an approved training program.

d. If a certified individual taking a refresher training course is also an approved instructor for that particular refresher training course and has access to the testing materials, the certified individual must take a refresher training course test supplied by the department in lieu of the normal refresher training course test.

70.5(7) The department shall approve the state certification examinations for the disciplines of lead inspector/risk assessor, elevated blood lead (EBL) inspector/risk assessor, lead abatement contractor, and project designer. The state certification examination shall be administered by selected community college testing centers in Iowa. A community college testing center shall set the fee for administering the state certification examination to each applicant and shall collect the fee from each applicant.

a. An individual must achieve a score of at least 80 percent on the examination. An individual may take the state certification examination no more than three times within six months of receiving a certificate of completion from an approved course.

b. If an individual does not pass the state certification examination within six months of receiving a certificate of completion from an approved course, the individual must retake the appropriate approved course before reapplying for certification.

70.5(8) Reciprocity. Each applicant for certification who is certified in any of the disciplines specified in this rule in another state may request reciprocal certification. The department shall evaluate the requirements for certification to determine that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa. For all disciplines except lead-safe renovator, if the department determines that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa, the applicant may be certified after passing a proctored test covering Iowa-specific lead information with a score of at least 80 percent. For a lead-safe renovator, if the department determines that the requirements for certification in such other state are as protective of health and the environment as the requirements for certification in Iowa, the applicant may be certified after signing a statement indicating that the applicant has read and understands Iowa-specific lead information provided by the department. Each applicant for certification pursuant to this subrule shall submit the appropriate application accompanied by the fee for each discipline as specified in 641—70.5(135).

[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.6(135) Work practice standards for lead professionals conducting lead-based paint activities in target housing and child-occupied facilities. All lead-based paint activities shall be performed according to the work practice standards in 641—70.6(135), and a certified individual must perform that activity in compliance with the appropriate requirements below.

70.6(1) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct a lead-free inspection according to the following standards. A lead-free inspection shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. When conducting a lead-free inspection in a residential dwelling, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.

(2) Except for components known to have been replaced after December 31, 1977, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. Except for walls, one sample shall be taken for each testing combination in a room. Each wall in a room shall be tested. The certified

lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall require one of the following two types of evidence to determine that components were replaced after 1977:

1. Detailed specifications showing which components were to be replaced, restored, enclosed, or encapsulated and evidence that the work was actually completed such as receipts for building materials, city building records showing a date of remodeling, or a final inspection by the city or another inspector showing that the work was actually completed.

2. A certification under penalty of perjury per Iowa Code section 622.1 from the contractor who did the work or from the person(s) who owned the property at the time outlining all of the components that were removed and replaced.

If one of these two types of evidence is not available, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test the component.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall note any components where lead-based paint has been enclosed or encapsulated. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not make a determination that the residential dwelling is lead-free where components that are painted with lead-based paint have been enclosed or encapsulated.

(4) Paint shall be tested using adequate quality control by X-ray fluorescence (XRF) or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use standards provided by the manufacturer and the NIST 1.02 standard film for calibration of the X-ray fluorescence analyzer.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection, every four hours, and at the end of the inspection.

4. Prior to taking the final set of calibration readings and if recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If instructed by the property owner or the person requesting the report, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that inconclusive readings are positive, but shall not assume that inconclusive readings are negative.

7. As described by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct retesting of 10 surfaces, calculate the retest tolerance limit, and determine whether the inspection meets the retest tolerance limit. If the retest tolerance limit is not met, then this procedure shall be repeated with 10 additional surfaces. If the retest tolerance limit is not met with the 20 retested surfaces, then all results of the inspection shall be considered invalid.

(5) If each testing combination in the residential dwelling is found to be free of lead-based paint, then the residential dwelling is free of lead-based paint. If any surface in the residential dwelling is found to be painted with lead-based paint, then the residential dwelling is not free of lead-based paint.

(6) If lead-based paint is identified through a lead-free inspection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

(7) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a lead-free inspection is completed. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the lead-free inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

1. A statement that the inspection was conducted to determine whether the residential dwelling is free of lead-based paint;
2. Date of inspection;
3. Address of building;
4. Date of construction;
5. Apartment numbers (if applicable);
6. The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
7. Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
8. Name and certification number of the certified firm(s) conducting the inspection;

9. Name, address, and telephone number of each laboratory conducting an analysis of collected samples;

10. Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) device;

11. XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated at each required calibration;

12. Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;

13. The results of retesting of 10 surfaces, calculations to determine the retest tolerance limit, and the determination of whether the inspection meets the retest tolerance limit;

14. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that the residential dwelling is free of lead-based paint, the report shall contain the following statement:

"The results of this inspection indicate that no lead in amounts greater than or equal to 1.0 mg/cm^2 in paint was found on any building components, using the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997). Therefore, this residential dwelling qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. However, some painted surfaces may contain levels of lead below 1.0 mg/cm^2, which could create lead dust or lead-contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by the owner and all future owners for the life of the residential dwelling. Per the disclosure requirements of 24 CFR Part 35 and 40 CFR Part 745, prospective buyers are entitled to all available inspection reports should the property be resold.";

15. If any lead-based paint is identified, a description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

16. A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

17. Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

18. Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation, remodeling and repainting found in 641—Chapter 70; and

19. The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

b. When conducting a lead-free inspection in multifamily housing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) A certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may randomly select residential dwellings for testing when conducting a lead-free inspection in multifamily housing. If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order

to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not randomly select the residential dwellings for testing or if there are not enough residential dwellings to randomly select them for sampling, all residential dwellings shall be tested. If random selection is used, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor conducting the lead-free inspection shall randomly select the residential dwellings to be tested. The property owner, manager, or another interested party shall not specify which residential dwellings are to be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

Table 1

Minimum Number of Residential Dwellings to be Randomly Selected in Multifamily Housing for Lead-Free Inspection, Risk Assessment, Lead Hazard Screen, or Clearance Testing

Number of Similar Residential Dwellings, Similar Common Areas, or Similar Exteriors in Multifamily Housing	Lead-Free Inspection, Risk Assessment, or Lead Hazard Screen		Clearance Testing
	Number of Pre-1960 Residential Dwellings or Residential Dwellings of Unknown Date of Construction to Randomly Select for Testing	Number of 1960-1977 Residential Dwellings to Randomly Select for Testing	Number of Residential Dwellings to Randomly Select for Clearance Testing

1040+	5.8%, rounded to the next highest whole number	2.9%, rounded to the next highest whole number	5.8%, rounded to the next highest whole number

(2) A certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may randomly select each type of common area in the multifamily housing, including but not limited to hallways, exterior sides of a building, and laundry rooms, for testing. Each type of common area shall be counted separately. If built before 1960, the multifamily housing shall contain at least 20 of a type of common area in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 of a type of common area in order to use random selection. If the certified lead

inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not randomly select the common areas for testing or if there are not enough common areas to randomly select them for testing, all common areas shall be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of each type of common area to randomly select for testing.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room of each residential dwelling selected for testing and in each common area selected for testing.

(4) Except for components known to have been replaced after December 31, 1977, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room of a residential dwelling chosen for testing and in each common area chosen for testing. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. Each wall in a room or a common area shall be tested. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall require one of the following two types of evidence to determine that components were replaced after 1977:

1. Detailed specifications showing which components were to be replaced, restored, enclosed, or encapsulated and evidence that the work was actually completed such as receipts for building materials, city building records showing a date of remodeling, or evidence of a final inspection by the city or another inspector showing that the work was actually completed.

2. A certification under penalty of perjury per Iowa Code section 622.1 from the contractor who did the work or from the person(s) who owned the property at the time outlining all of the components that were removed and replaced.

If one of these two types of evidence is not available, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test the component.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall note any components where lead-based paint has been enclosed or encapsulated. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not make a determination that a component or the multifamily housing is lead-free where components that are painted with lead-based paint have been enclosed or encapsulated.

(6) Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must use an X-ray fluorescence analyzer which has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not use an X-ray fluorescence analyzer using a software version or a mode of operation that could result in inconclusive readings or that recommends substrate correction.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use standards provided by the manufacturer and the NIST 1.02 standard film for calibration of the X-ray fluorescence analyzer.

4. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection, every four hours, and at the end of the inspection.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading as positive or negative according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk

assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall count the number of XRF readings taken for each component type. If fewer than 40 of any component type were tested, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall randomly choose additional testing combinations for the component type to reach a total of 40 XRF readings. If fewer than 40 testing combinations are available for testing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination.

(7) For each component type where at least 40 testing combinations have been tested, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine the number and percentage of each component type that is classified as positive or negative. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each component type as follows:

1. Lead-based paint is not present on a component type if all readings are classified as negative.

2. Lead-based paint is present on a component type if at least 15 percent of the readings are classified as positive.

3. Lead-based paint is present on a component type if greater than or equal to 5 percent but less than 15 percent of the XRF readings are classified as positive, unless the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor collects paint samples and obtains laboratory analyses for all positive XRF readings. If the laboratory analyses show that lead-based paint is not present on any components, then the component type is negative. If the laboratory analyses show that lead-based paint is present on any component, then the component type is positive.

4. Lead-based paint is present on a component type if greater than 0 but less than 5 percent of the XRF readings are classified as positive, unless the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor collects paint samples and obtains laboratory analyses for all positive XRF readings or randomly selects a second set of residential dwellings for testing. If the laboratory analyses show that lead-based paint is not present on any components, then the component type is negative. If the laboratory analyses show that lead-based paint is present on any component, then the component type is positive. If a second set of randomly selected residential dwellings is sampled and greater than 0 but less than 2.5 percent of the combined set of results is positive, the component type may be considered as not having lead-based paint developmentwide but rather, having lead-based paint in isolated locations, with a reasonable degree of confidence. Individual components that are classified as positive should be considered lead-based painted and managed or abated appropriately.

5. If a particular component type in the sampled residential dwellings is classified as positive, that same component type in the unsampled residential dwellings is also classified as positive.

(8) If fewer than 40 of a component type are available for testing, each testing combination must be classified individually as positive or negative.

(9) If any component type or individual component is classified as positive, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that the multifamily housing is free of lead-based paint.

(10) As specified by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct retesting of 10 surfaces selected from two residential dwellings, calculate the retest tolerance limit, and determine whether the inspection meets the retest tolerance limit. If the retest tolerance limit is not met, then this procedure shall be repeated with 10 additional surfaces selected from the two residential dwellings. If the retest tolerance limit is not met with the 20 retested surfaces, then all results of the inspection shall be considered invalid.

(11) If lead-based paint is identified on any component or component type, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

(12) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility inspected. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The inspection report shall include, at least:

1. Date of each inspection;
2. Address of each building in the multifamily housing;
3. Date of construction for each building in the multifamily housing;
4. A list of the apartments and common areas in each building in the multifamily housing;
5. The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;
6. A statement that the inspection was conducted to determine that lead-based paint is not present;
7. The name of the Iowa-certified inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor who randomly selected the residential dwellings and common areas for testing;
8. The number of residential dwellings and common areas that were selected for testing, how these numbers were determined, and a list of the residential dwellings and common areas that were selected for testing;
9. Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;
10. Name and certification number of the certified firm(s) conducting the inspection;
11. Name, address, and telephone number of each laboratory conducting an analysis of collected samples;
12. Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;
13. XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated at each required calibration;
14. Specific locations by room of each painted component tested for the presence of lead-based paint and by residential dwelling or common area and the results for each component expressed in terms appropriate to the sampling method used;
15. Component aggregations and the determination of whether lead-based paint is present by component type;
16. The results of retesting of 10 surfaces, calculations to determine the retest tolerance limit, and the determination of whether the inspection meets the retest tolerance limit;
17. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that the multifamily housing is free of lead-based paint, the report shall contain the following statement:

"The results of this inspection indicate that no lead in amounts greater than or equal to 1.0 mg/cm^2 in paint was found on any building components, using the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing (1997). Therefore, this multifamily housing qualifies for the exemption in 24 CFR Part 35 and 40 CFR Part 745 for target housing being leased that is free of lead-based paint, as defined in the rule. However, some painted surfaces may contain levels of lead below 1.0 mg/cm^2, which could create lead dust or lead-contaminated soil hazards if the paint is turned into dust by abrasion, scraping, or sanding. This report should be kept by

the owner and all future owners for the life of the multifamily housing. Per the disclosure requirements of 24 CFR Part 35 and 40 CFR Part 745, prospective buyers are entitled to all available inspection reports should the property be resold.";

18. If any lead-based paint is identified, a description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

19. A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

20. Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

21. Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

22. The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(2) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct lead inspections according to the following standards. Lead inspections shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. When conducting a lead inspection in a residential dwelling or child-occupied facility, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. One sample shall be taken for each testing combination in a room, including the walls. If a testing combination is painted and not tested, it shall be assumed to be painted with lead-based paint.

b. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL)

inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

c. If lead-based paint is identified through an inspection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

d. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility inspected. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The inspection report shall include, at least:

(1) A statement that the inspection was conducted to identify lead-based paint and lead-based paint hazards in the residential dwelling;

(2) Date of each inspection;

(3) Address of building;

(4) Date of construction;

(5) Apartment numbers (if applicable);

(6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(7) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;

(8) The name and certification number of the certified firm(s) conducting the inspection;

(9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;

(11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;

(13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;

(14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

(15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

(16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(3) A certified elevated blood lead (EBL) inspector/risk assessor must conduct elevated blood lead (EBL) inspections according to the following standards. Elevated blood lead (EBL) inspections shall be conducted only by a certified elevated blood lead (EBL) inspector/risk assessor.

a. When conducting an elevated blood lead (EBL) inspection, the certified elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified elevated blood lead (EBL) inspector/risk assessor shall test paint in each room, including each exterior side.

(2) The certified elevated blood lead (EBL) inspector/risk assessor shall test each testing combination in each room. One sample shall be taken for each testing combination in a room, including walls. On windows, the window frame, interior windowsill, window sash, and window trough shall each be considered a separate testing combination. If a testing combination is painted and not tested, it shall be assumed to be painted with lead-based paint.

b. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics

sheet for the XRF. The certified elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings, then the certified elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

c. If lead-based paint is identified through an elevated blood lead (EBL) inspection, the certified elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

d. No later than two weeks after the receipt of laboratory results, a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where an elevated blood lead (EBL) inspection has been conducted and shall provide a copy of this report to the property owner and the occupant of the dwelling. The report shall include, at least:

(1) A statement that the elevated blood lead (EBL) inspection was conducted to identify lead-based paint and lead-based paint hazards in the residential dwelling;

(2) Date of each elevated blood lead (EBL) inspection;

(3) Address of building;

(4) Date of construction;

(5) Apartment numbers (if applicable);

(6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(7) Name, signature, and certification number of each certified elevated blood lead (EBL) inspector/risk assessor conducting the inspection;

(8) Name and certification number of the certified firm(s) conducting the inspection;

(9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;

(11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;

(13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;

(14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

(15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

(16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by an elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

e. A certified elevated blood lead (EBL) inspector/risk assessor shall maintain for no fewer than ten years a written record for each residential dwelling or child-occupied facility where an elevated blood lead (EBL) inspection has been conducted. The record shall include, at least:

(1) A copy of the written report required by paragraph 70.6(3)*"d."*

(2) Blood lead test results for the elevated blood lead (EBL) child.

(3) A record of conversations held with the owners and occupants of each residential dwelling or child-occupied facility prior to, during, and after the EBL inspection.

(4) Records of follow-up visits made to each residential dwelling or child-occupied facility where lead-based paint hazards are identified and, when issued, a copy of the clearance report.

70.6(4) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct lead hazard screens according to the following standards. Lead hazard screens shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

b. A visual inspection of the residential dwelling or child-occupied facility shall be conducted to determine if any deteriorated paint is present and to locate at least two dust sampling locations.

c. If deteriorated paint is present, each surface with deteriorated paint which is determined to have a distinct painting history must be tested for the presence of lead. In addition, friction surfaces where there is evidence of abrasion and impact surfaces that are damaged or otherwise deteriorated from impact and that have a distinct painting history shall be tested for the presence of lead.

d. In residential dwellings, a minimum of two composite or single-surface dust samples shall be collected. One sample shall be collected from the floors and the other from the interior windowsills in rooms, hallways, or stairwells where at least one child under the age of six years is most likely to come in contact with dust.

e. In multifamily dwellings and child-occupied facilities, single-surface or composite dust samples shall also be collected from common areas where at least one child under the age of six years is likely to come in contact with dust.

f. Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

g. Soil samples shall be collected and analyzed for lead content in exterior play areas and dripline areas where bare soil is present. In addition, soil samples shall be collected and analyzed for lead content from any other areas of the yard where bare soil is present. Soil and paint samples shall be collected using the documented methodologies specified in guidance documents issued by the department and shall be analyzed by a recognized laboratory to determine the level of lead.

h. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in

guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the National Institute of Standards and Technology 1.02 milligrams of lead per square centimeter standard reference material or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated

blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

i. The following standards shall be used to determine whether a residential dwelling or child-occupied facility fails a lead hazard screen:

(1) A residential dwelling or child-occupied facility shall fail a lead hazard screen if any deteriorated paint or paint on friction or impact surfaces is found to be lead-based paint.

(2) A residential dwelling shall fail a lead hazard screen if any floor dust lead level in a single-surface or composite-surface dust sample is greater than or equal to 25 micrograms per square foot.

(3) A residential dwelling shall fail a lead hazard screen if any interior windowsill dust level in a single-surface or composite-surface dust sample is greater than or equal to 125 micrograms per square foot.

(4) A residential dwelling or child-occupied facility shall fail a lead hazard screen if any bare soil is found to be a soil-lead hazard.

j. When conducting a lead hazard screen in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible:

1. The residential dwelling has been cited with a housing or building code violation within the past year.
2. The property owner believes that the residential dwelling is in poor condition.
3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.
4. The residential dwelling serves as a day care facility.
5. The residential dwelling has been prepared for reoccupancy within the past three months.

If additional residential dwellings are needed to meet the minimum number specified in Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly.

Table 2

Minimum Number of Residential Dwellings in Multifamily Housing for Risk Assessment or Lead Hazard Screen Through Targeted Selection

Number of Similar Residential Dwellings	Number of Residential Dwellings to Sample*
1-4	All
5-20	4 residential dwellings or 50% (whichever is greater)**
21-75	10 residential dwellings or 20% (whichever is greater)**
76-125	17
126-175	19
176-225	20
226-300	21
301-400	22
401-500	23
501+	24 + 1 residential dwelling for each additional increment of 100 residential dwellings or less

*Does not include residential dwellings housing children with elevated blood lead levels.
**For percentages, round up to determine number of residential dwellings to be sampled.

k. If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested.

l. The following standards shall be used to determine whether multifamily housing fails a lead hazard screen:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust lead levels for carpeted floors, uncarpeted floors, and interior windowsills. If the arithmetic mean for carpeted floors or uncarpeted floors is greater than or equal to 25 micrograms per square foot, the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for interior windowsills is greater than or equal to 125 micrograms per square foot, the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for carpeted floors or uncarpeted floors is less than 25 micrograms per square foot, but some of the samples have dust lead levels that are greater than or equal to 25 micrograms per square foot, then the residential dwellings where these samples were taken and all other similar residential dwellings in the multifamily housing shall fail the lead hazard screen. If the arithmetic mean for interior windowsills is less than 125 micrograms per square foot, but some of the samples have dust lead levels that are greater than or equal to 125 micrograms per square foot, then the residential dwellings where these samples were taken and all other similar residential dwellings in the multifamily housing shall fail the lead hazard screen.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined to not be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings. If a component in a residential dwelling is determined or assumed to be

lead-based paint, then the entire group of similar residential dwellings in the multifamily housing shall fail the lead hazard screen.

(3) Multifamily housing shall fail a lead hazard screen if any bare soil is found to be a soil-lead hazard.

m. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a lead hazard screen is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the lead hazard screen, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

(1) Date of each lead hazard screen.

(2) Address of building.

(3) Date of construction.

(4) Apartment numbers (if applicable).

(5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility.

(6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the lead hazard screen.

(7) Name and certification number of the certified firm(s) conducting the lead hazard screen.

(8) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(9) Results of the visual inspection.

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer.

(11) If used, XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated.

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component tested expressed in terms appropriate to the sampling method used.

(13) All results of laboratory analysis of collected paint, dust, and soil samples. The results of dust sampling shall be reported in micrograms of lead per square foot, and the results of soil sampling shall be reported in parts per million of lead. Results shall not be reported as "not detectable."

(14) Any other sampling results.

(15) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint.

(16) Background information collected regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years.

(17) Whether the residential dwelling or child-occupied facility passed or failed the lead hazard screen and recommendations, if warranted, for a follow-up lead inspection or risk assessment, and, as appropriate, any further actions.

(18) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

(19) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70.

(20) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(5) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct risk assessments according to the following standards. Risk assessments shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

b. A visual inspection for risk assessment shall be undertaken to locate the existence of deteriorated paint and other potential lead hazards and to assess the extent and causes of the paint deterioration.

c. If deteriorated paint is present, each surface with deteriorated paint which is determined to have a distinct painting history must be tested for the presence of lead.

d. Friction surfaces where there is evidence of abrasion and impact surfaces that are damaged or otherwise deteriorated from impact and that have a distinct painting history shall be tested for the presence of lead.

e. In residential dwellings, dust samples shall be collected from the interior windowsill, window trough, and floor in all living areas where at least one child is most likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

f. In multifamily dwellings, dust samples shall also be collected from interior windowsills, window troughs, and floors in common areas adjacent to the sampled residential dwellings or child-occupied facility and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

g. In child-occupied facilities, dust samples shall be collected from the interior windowsill, window trough, and floor in each room, hallway, or stairwell utilized by one or more children under the age of six years and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust. Dust samples shall be analyzed for lead concentration and may be either composite or single-surface samples.

h. Soil samples shall be collected and analyzed for lead content in exterior play areas and dripline areas where bare soil is present. In addition, soil samples shall be collected and analyzed for lead content from any other areas of the yard where bare soil is present.

i. Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet. Soil and paint samples shall be collected using the documented methodologies specified in guidance documents issued by the department. Dust and soil samples shall be analyzed by a recognized laboratory to determine the level of lead. The results of dust sampling shall be reported in micrograms of lead per square foot, and the results of soil sampling shall be reported in parts per million of lead. The results shall not be reported as "not detectable."

j. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in

guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film material or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by

collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

k. When conducting a risk assessment in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible. If additional residential dwellings are needed to meet the minimum number specified in Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly. Targeted selection criteria are as follows:

1. The residential dwelling has been cited with a housing or building code violation within the past year.
2. The property owner believes that the residential dwelling is in poor condition.
3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.
4. The residential dwelling serves as a day care facility.
5. The residential dwelling has been prepared for reoccupancy within the past three months.

(3) If the multifamily housing contains five or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than five similar dwellings, all residential dwellings shall be tested.

(4) The following standards shall be used to determine the extent of lead-based paint hazards throughout multifamily housing that is sampled by random selection, targeted selection, or worst case selection:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust lead levels for carpeted floors, uncarpeted floors, interior windowsills, and window troughs. If the arithmetic mean is greater than or equal to the level defined as a dust lead hazard for the component, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust lead hazard has been identified on the component throughout the multifamily housing. If the arithmetic mean is less than the level defined as a dust lead hazard for the component, but some of the individual components have dust lead levels that are greater than or equal to the level defined as a dust lead hazard, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust lead hazard has been identified on the individual components and on all other similar components throughout the multifamily housing.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined to not be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings.

l. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a risk assessment is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the risk assessment, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of the report for no less than three years. The report shall include, at least:

(1) Date of each risk assessment;

(2) Address of building;

(3) Date of construction;

(4) Apartment numbers (if applicable);

(5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the risk assessment;

(7) Name and certification number of the certified firm(s) conducting the risk assessment;

(8) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b));

(9) Results of the visual inspection;

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;

(11) If used, XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component tested expressed in terms appropriate to the sampling method used;

(13) All results of laboratory analysis of collected paint, dust, and soil samples;

(14) Any other sampling results;

(15) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;

(16) Background information collected regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years;

(17) To the extent that they are used as part of the lead-based paint hazard determination, the results of any previous inspections or analyses for the presence of lead-based paint, or other assessments of lead-based paint hazards;

(18) A description of the location, type, and severity of identified lead-based paint hazards, and any other potential lead hazards, including bare soil in the play area or in the dripline of a home where

lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

(19) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

(20) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(21) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(22) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(6) A certified lead abatement contractor or certified lead abatement worker must conduct lead abatement according to the following standards. Lead abatement shall be conducted only by a certified lead abatement contractor or a certified lead abatement worker.

a. A certified lead abatement contractor must be on site during all work site preparation and during the postabatement cleanup of work areas. At all other times when lead abatement is being conducted, the certified lead abatement contractor shall be on site or available by telephone, pager, or answering service, and be able to be present at the work site in no more than two hours.

b. A certified lead abatement contractor shall ensure that lead abatement is conducted according to all federal, state, and local requirements.

c. A certified lead abatement contractor shall notify the department in writing at least seven days prior to the commencement of lead abatement in a residential dwelling or child-occupied facility. The notification shall include the following information:

(1) The address, including apartment numbers, where lead abatement will be conducted.

(2) The dates when lead abatement will be conducted.

(3) The name, address, telephone number, Iowa certification number, and signature of the contact for the certified firm that will conduct the work.

(4) The name, address, telephone number, Iowa certification number, and signature of the certified lead abatement contractor who will serve as the contact person for the project.

(5) The name, address, and telephone number of the property owner.

(6) Whether the dwelling is owner-occupied or a rental dwelling.

(7) If the dwelling is an occupied rental, the names of the occupants.

(8) The approximate year that the dwelling was built.

(9) A brief description of the lead abatement work to be done.

d. A certified lead abatement contractor shall submit a revised notification to the department if any information in the original notification changes.

e. A certified lead abatement contractor shall ensure that the worksite(s) is accessed only by certified lead professionals according to Iowa Administrative Code 641—70.3(135) and 70.5(135). Noncertified individuals shall not be allowed access to a worksite. A worksite shall remain inaccessible to noncertified individuals until it passes clearance testing.

f. A certified lead abatement contractor or a certified project designer shall develop a written occupant protection plan for all lead abatement projects prior to starting lead abatement and shall implement the occupant protection plan during the lead abatement project. The occupant protection plan shall be unique to each residential dwelling or child-occupied facility. If the occupants will be living at the property where lead abatement is taking place, then the written occupant plan shall be

given to the occupants prior to the start date of the lead abatement project and must contain at least the following information:

(1) A description of the type and location of the physical barriers that will keep occupants out of the designated worksite(s).

(2) An explanation of how the contractor will ensure that the worksite(s) is not entered by the occupants.

(3) An explanation of how the contractor will ensure that the occupants have access to a kitchen, bathroom, and living area that are not in the worksite(s).

g. Approved methods must be used to conduct lead abatement, and prohibited work practices must not be used to conduct lead abatement.

(1) Signs must be posted and readable. All signs must be posted before lead abatement begins and must remain in place until dust-lead clearance has been passed.

1. To the extent practicable, all signage must be posted in the occupants' primary language.
2. The signs must clearly define the work area.
3. The signs must warn occupants and other persons not involved with the lead abatement to remain outside the work area.
4. The signs must be posted at the entrance(s) to all work areas.

(2) The work area must be effectively contained before the lead abatement begins. To be effective, containment must:

1. Isolate the work area so that no dust or debris leaves the work area while the lead abatement is being performed.
2. Be monitored and maintained so that any plastic or other impermeable materials are not torn or displaced.
3. Be installed in such a manner that it does not interfere with occupant and worker egress in an emergency.

(3) For interior lead abatement, containment shall include:

1. The removal or covering of all objects from the work area, including but not limited to furniture, rugs, and window coverings. Objects that are not removed from the work area must be covered with plastic sheeting or other impermeable material with all seams and edges taped or otherwise sealed.
2. Closing and covering all duct openings in the work area. Ducts must be covered with plastic sheeting or other impermeable material that is taped down.
3. Closing windows and doors in the work area. Doors must be covered with plastic sheeting or other impermeable material. Doors used as an entrance to the work area must be covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.
4. Covering the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of the surfaces undergoing lead abatement or a sufficient distance to contain the dust, whichever is greater.
5. Ensuring that all personnel, tools, and other items, including the exteriors of containers of waste, are free of dust and debris before leaving or being removed from the work area.

(4) For exterior lead abatement, containment shall include:

1. Closing all doors and windows within 20 feet of the lead abatement. On multistory buildings, all doors and windows within 20 feet of the lead abatement on the same story as the lead abatement shall be closed, and all doors and windows on all stories below the lead abatement that are the same horizontal distance from the lead abatement shall be closed.
2. Ensuring that doors within the work areas that will be used while the lead abatement is being performed are covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.
3. Covering the ground with plastic sheeting or other disposable impermeable material extending 10 feet beyond the perimeter of surfaces undergoing lead abatement or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground cover.

Exterior ground cover shall include anchors or weights to ensure that the covering remains effective even during weather conditions such as high wind.

4. Vertical containment. In certain situations, such as where other buildings are in close proximity to the work area, when conditions are windy, or where the work area abuts a property line, the certified lead abatement contractor or certified lead abatement worker shall erect a system of vertical containment designed to prevent dust and debris from migrating to adjacent property or contaminating the ground, other buildings, or any object beyond the work area.

(5) The following are prohibited work practices:

1. Open-flame burning or torching of lead-based paint.

2. Machine sanding or grinding or abrasive blasting or sandblasting of lead-based paint unless used with high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency.

3. Uncontained water blasting of lead-based paint.

4. Dry scraping or dry sanding of lead-based paint except in conjunction with the use of a heat gun or around electrical outlets.

5. Operating a heat gun at a temperature at or above 1100 degrees Fahrenheit.

(6) All waste generated during lead abatement shall be contained to prevent the release of dust and debris before the waste is removed from the work area for storage or disposal. Any chutes used to remove waste from the work area shall be covered.

1. At the conclusion of each workday and at the conclusion of the lead abatement, waste that has been collected from lead abatement activities must be stored under containment, in an enclosure, or behind a barrier that prevents release of dust and debris out of the work area and prevents access to dust and debris.

2. All waste from lead abatement must be contained during transportation so that no dust or debris is released.

(7) The work area shall be cleaned so that no dust, debris, or residue remains after lead abatement. Cleaning shall include:

1. The collection of all paint chips and debris and, without dispersing the paint chips and debris, the sealing of the materials in heavy-duty bags.

2. The removal of the protective sheeting used as required in this subrule. The sheeting shall be misted, then the sheeting shall be folded dirty side inward. All sheeting shall be taped shut or otherwise sealed inside heavy-duty bags. Sheeting used to separate work areas from non-work areas must remain in place until after the cleaning and removal of other sheeting. All sheeting shall be disposed of as waste.

3. For interior lead abatement, all objects and surfaces in the work area and within two feet of the work area must be cleaned from high to low in the following manner:

- Walls must either be vacuumed with a HEPA vacuum or wiped with a wet cloth, beginning at the ceiling and working toward the floor.
- All remaining surfaces including objects and fixtures must be thoroughly vacuumed with a HEPA vacuum. For carpeted floors and rugs, the HEPA vacuum must be equipped with a beater bar.
- All remaining surfaces, except for carpeted or upholstered surfaces, must also be wiped with a damp cloth. Uncarpeted floors must be thoroughly mopped using a method that keeps the wash water separate from the rinse water, such as the two-bucket mopping method, or using a wet mopping system.

h. Soil abatement shall be conducted using one of the following methods:

(1) If soil is removed, soil that is a soil-lead hazard shall be replaced by soil with a lead concentration as close to the local background as practicable, but less than 400 parts per million. The soil that is removed shall not be used as topsoil at another residential property or child-occupied facility.

(2) If soil is not removed, the soil that is a soil-lead hazard shall be remediated to meet the definition of "permanently covered soil."

i. If lead-based paint is removed from a surface, the surface shall be repainted or refinished prior to postabatement clearance dust sampling. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall visually verify that lead-based paint was removed from a surface prior to repainting or refinishing.

j. If components painted with lead-based paint are removed, the replacement components shall be installed prior to postabatement clearance testing.

k. Postabatement clearance procedures shall be conducted by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor. If the abatement is conducted in response to an elevated blood lead (EBL) inspection, clearance must be conducted by a certified elevated blood lead (EBL) inspector/risk assessor. Postabatement clearance testing shall be performed by persons or entities independent of those performing lead abatement, unless the designated party uses qualified in-house employees to conduct postabatement clearance testing. An in-house employee shall not conduct both lead abatement and the postabatement clearance testing for this work. Postabatement clearance testing shall be conducted using the following procedures:

(1) Following a lead abatement, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall review the report of the lead inspection, risk assessment, or visual assessment done prior to the lead abatement project and the lead abatement specifications to determine the lead-based paint hazards that were to be abated by the lead abatement project. The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall perform a visual inspection to determine if all lead-based paint hazards that were to be abated have been abated and to determine if deteriorated paint surfaces or visible amounts of dust, debris, or residue are still present in the rooms where lead abatement was conducted. If lead-based paint hazards that were to be abated by the project or deteriorated paint surfaces or visible amounts of dust, debris, or residue are present in the rooms where lead abatement was conducted, these conditions must be eliminated prior to the continuation of the clearance procedures. However, elimination of deteriorated paint is not required if it has been determined through paint testing or a lead-based paint inspection that the deteriorated paint is not lead-based paint. Following an exterior lead abatement, a visual inspection shall be conducted to determine if all lead-based paint hazards that were to be abated have been abated and to determine if any visible dust or debris remains on any horizontal surfaces in the outdoor living areas close to the abated surface. In addition, a visual inspection shall be conducted to determine the presence of paint chips on the dripline or next to the foundation below any exterior surface that was abated. If lead-based paint hazards that were to be abated by the project are still present, these conditions must be eliminated prior to the continuation of the clearance procedures. If visible dust, debris, or paint chips are present, they must be removed from the site and properly disposed of according to all applicable federal, state, and local standards.

(2) Following the visual inspection and any required postabatement cleanup, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall conduct clearance sampling for lead in dust. Clearance sampling may be conducted by employing single-surface sampling or composite dust sampling. Interior dust-lead testing shall be performed for all projects that include window replacement.

(3) Dust samples shall be collected a minimum of one hour after the completion of final postabatement cleanup activities.

(4) Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

(5) The following postabatement clearance activities shall be conducted as appropriate based upon the extent or manner of lead abatement activities conducted in the residential dwelling or child-occupied facility:

1. After conducting a lead abatement with containment between abated and unabated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells within the containment area. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each of no fewer than four rooms, hallways, or stairwells within the containment area. In addition, one dust sample shall be taken from

the floor outside of each individual containment area. If there are fewer than four rooms, hallways, or stairwells within the containment area, then all rooms, hallways, and stairwells shall be sampled.

2. After conducting a lead abatement with no containment between abated and unabated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each room, hallway, or stairwell selected. If there are fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility, then all rooms, hallways, and stairwells shall be sampled.

3. The certified lead abatement contractors and certified lead abatement workers who abate or clean the dwellings shall not have any knowledge of which rooms or surfaces will be selected for the dust samples.

(6) Reserved.

(7) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall compare the residual lead level as determined by the laboratory analysis from each single-surface dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs. If the residual lead level in a single-surface dust sample is greater than or equal to the applicable clearance level for a floor, interior windowsill, or window trough, then the failed component in each room with a failed single-surface dust sample and that type of component in each room that was not tested shall be recleaned. Additional clearance samples shall be taken from the failed component in each room where it failed and from enough additional rooms that were not previously tested so that four rooms are sampled. If four rooms are not available, then each available room shall be retested. The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of this testing to determine if the recleaned components meet the clearance level. The components must be recleaned and retested until the clearance level is met.

(8) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall compare the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. If the residual lead level in a composite dust sample is greater than or equal to the applicable clearance level divided by half the number of subsamples in the composite sample, then all the components represented by the failed composite dust sample shall be recleaned and retested until clearance levels are met.

l. In multifamily housing consisting of at least 20 similarly constructed and maintained residential dwellings, random selection for the purpose of clearance testing may be conducted if the following conditions are met:

(1) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall randomly select the residential dwellings that will be sampled. The certified lead abatement contractors and certified lead abatement workers who abate or clean the dwellings do not know which residential dwellings will be selected for the random selection or which rooms or surfaces will be selected for the dust samples.

(2) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the minimum number of residential dwellings selected for dust sampling. This shall provide a 95 percent level of confidence that no more than 5 percent or 50 of the residential dwellings (whichever is smaller) in the randomly sampled population are greater than or equal to the appropriate clearance levels.

(3) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall sample the randomly selected residential dwellings and evaluate them for clearance according to the procedures found in paragraphs 70.6(6)*"i"* through *"k."*

m. No later than three weeks after the property passes clearance, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a report to the lead abatement contractor that contains the items required by subparagraphs 70.6(6)*"n"*(7) through (9).

n. The certified lead abatement contractor or a certified project designer shall prepare a lead abatement report containing the following information:

(1) A copy of the original and any revised lead abatement notifications.

(2) Starting and completion dates of the lead abatement project.

(3) The name, address, and telephone number of the property owner(s).

(4) The name, address, and signature of the certified lead abatement contractor and of the certified firm contact for the firm conducting the lead abatement.

(5) Whether or not containment was used and, if containment was used, the locations of the containment.

(6) The occupant protection plan required by paragraph 70.6(6)*"f."*

(7) The name, address, and signature of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting clearance sampling, the date on which the clearance testing was conducted, the results of the visual inspection for the presence of lead hazards that were not abated as specified, deteriorated paint and visible dust, debris, residue, or paint chips in the interior rooms and exterior areas where lead abatement was conducted, and the results of all postabatement clearance testing and all soil analyses, if applicable. The results of dust sampling shall be reported in micrograms of lead per square foot by location of sample, and the results of soil sampling shall be reported in parts per million of lead. The results shall not be reported as "not detectable." If random selection was used to select the residential dwellings that were sampled, the report shall state that random selection was used, the number of residential dwellings that were sampled, and how this number was determined.

(8) A statement that the lead abatement was or was not done as specified and that the rooms and exterior areas where lead abatement was conducted did or did not pass the visual clearance and the clearance dust testing. If the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the clearance testing cannot verify that all lead-based paint hazards have been abated, the report shall contain the following statement:

"The purpose of this clearance report is to verify that the lead abatement project was done according to the project specifications. This residential dwelling may still contain hazardous lead-based paint, soil-lead hazards, or dust-lead hazards in the rooms or exterior areas that were not included in the lead abatement project."

(9) The name, address, and telephone number of each recognized laboratory conducting an analysis of clearance samples and soil samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(10) A detailed written description of the lead abatement project, including lead abatement methods used, locations of rooms and components where lead abatement occurred, reasons for selecting particular lead abatement methods, and any suggested monitoring of encapsulants or enclosures.

(11) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

(12) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70.

(13) If applicable, a copy of the written consent or waiver required by subrule 70.6(13).

o. The lead abatement report shall be completed no later than 30 days after the lead abatement project passes clearance testing.

p. The certified lead abatement contractor shall maintain all reports and plans required in this subrule for a minimum of three years.

q. The certified lead abatement contractor shall provide a copy of all reports required by this subrule to the building owner and to the person who contracted for the lead abatement, if different.

70.6(7) A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician must conduct visual risk assessments according to the following standards. Visual risk assessments shall be conducted only by a certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician.

a. Background information regarding the physical characteristics of the residential dwelling or child-occupied facility and occupant use patterns that may cause lead-based paint exposure to at least one child under the age of six years shall be collected.

b. A visual inspection for risk assessment shall be undertaken to locate the existence of deteriorated paint and other potential lead-based paint hazards and to assess the extent and causes of the paint deterioration. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall assess each component in each room, including each exterior side. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall identify the following conditions as potential lead-based paint hazards:

(1) All interior and exterior surfaces with deteriorated paint.

(2) Horizontal hard surfaces, including but not limited to floors and windowsills, that are not smooth or cleanable.

(3) Dust-generating conditions, including but not limited to conditions causing rubbing, binding, or crushing of surfaces known or presumed to be coated with lead-based paint.

(4) Bare soil in the play area and dripline of the home.

c. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall prepare a written report for each residential dwelling or child-occupied facility where a visual risk assessment is conducted. No later than three weeks after completing the visual risk assessment, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall send a copy of the report to the property owner and to the person requesting the visual risk assessment, if different. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall maintain a copy of the report for no less than three years. The report shall include, at least:

(1) Date of each visual risk assessment;

(2) Address of building;

(3) Date of construction;

(4) Apartment numbers (if applicable);

(5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(6) Name, signature, and certification number of each certified sampling technician, certified lead inspector/risk assessor, or certified elevated blood lead (EBL) inspector/risk assessor conducting the visual risk assessment;

(7) Name and certification number of the certified firm(s) conducting the visual risk assessment;

(8) A statement that all painted or finished components must be assumed to contain lead-based paint;

(9) Specific locations of painted or finished components identified as likely to contain lead-based paint and likely to be lead-based paint hazards;

(10) Specific locations of bare soil in the play area and the dripline of a home;

(11) Information for the owner and occupants on how to reduce lead hazards in the residential dwelling or child-occupied facility;

(12) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(13) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(14) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any

addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(8) A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician must conduct clearance testing according to the following standards. Clearance testing following lead abatement shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor. Clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35 shall be conducted only by certified sampling technicians, certified lead inspector/risk assessors, or certified elevated blood lead (EBL) inspector/risk assessors. If the abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 is conducted in response to an elevated blood lead (EBL) inspection, clearance must be conducted by a certified elevated blood lead (EBL) inspector/risk assessor.

a. Clearance testing following lead abatement shall be conducted according to paragraphs 70.6(6)*"i"* through *"m."*

b. Clearance testing after renovation and clearance testing after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 shall be conducted according to the following standards:

(1) A certified sampling technician shall perform clearance testing only for a single-family property or for individual residential dwellings and associated common areas in multifamily housing. A certified sampling technician shall not perform clearance testing using random selection of residential dwellings or common areas in multifamily housing.

(2) A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall review the report of the lead inspection, risk assessment, or visual assessment done prior to interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 and the project specifications to determine the lead-based paint hazards that were to be controlled by the project. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall perform a visual inspection to determine if all lead-based paint hazards that were to be controlled by the project have been controlled and to determine if deteriorated paint surfaces or visible amounts of dust, debris, or residue are still present in the rooms where interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation were conducted pursuant to 24 CFR Part 35. If lead-based paint hazards that were to be controlled by the project, deteriorated paint surfaces or visible amounts of dust, debris, or residue are present in these rooms, these conditions must be eliminated prior to the continuation of the clearance testing. However, elimination of deteriorated paint is not required if it has been determined through a lead-based paint inspection that the deteriorated paint is not lead-based paint. If exterior painted surfaces have been disturbed by the interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35, the visual inspection shall include an assessment to determine if all exterior lead-based paint hazards that were to be controlled by the project have been controlled and to determine if any visible dust or debris remains on any horizontal surfaces in the outdoor living areas close to the affected exterior painted surfaces. In addition, a visual inspection shall be conducted to determine if paint chips are present on the dripline or next to the foundation below any exterior painted surface that was treated. If lead-based paint hazards that were to be controlled by the project are still present, these conditions must be eliminated prior to the continuation of the clearance procedures. If visible dust, debris, or paint chips are present, they must be removed from the site and properly disposed of according to all applicable federal, state, and local standards.

(3) Following the visual inspection and any required cleanup, clearance sampling for lead in dust shall be conducted. Clearance sampling may be conducted by employing single-surface sampling or composite dust sampling.

(4) Dust samples shall be collected a minimum of one hour after the completion of final cleanup activities.

(5) Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

(6) The following clearance activities shall be conducted as appropriate based upon the extent or manner of renovation or of interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 in the residential dwelling or child-occupied facility:

1. After conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, with containment between treated and untreated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells within the containment area. Dust samples shall be taken from one interior windowsill and from one window trough (if available), and one dust sample shall be taken from the floor of each of no fewer than four rooms, hallways, or stairwells within the containment area. In addition, one dust sample shall be taken from the floor outside of each individual containment area. If there are fewer than four rooms, hallways, or stairwells within the containment area, then all rooms, hallways, and stairwells shall be sampled. Interior dust-lead testing shall be performed for all projects that include window replacement.

2. After conducting renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35, with no containment between treated and untreated areas, three dust samples shall be taken from each of no fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility. Dust samples shall be taken from one interior windowsill and window trough (if available), and one dust sample shall be taken from the floor of each room, hallway, or stairwell selected. If there are fewer than four rooms, hallways, or stairwells in the residential dwelling or child-occupied facility, then all rooms, hallways, and stairwells shall be sampled. Interior dust-lead testing shall be performed for all projects that include window replacement.

(7) The contractors conducting the work or cleaning the dwellings shall not know which rooms or surfaces will be selected for the dust samples.

(8) The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall compare the residual lead level as determined by the laboratory analysis from each single-surface dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs. If the residual lead level in a single-surface dust sample is greater than or equal to the applicable clearance level for a floor, interior windowsill, or window trough, then the failed component in each room with a failed single-surface dust sample and that type of component in each room that was not tested shall be recleaned. Additional clearance samples shall be taken from the failed component in each room where it failed and from enough additional rooms that were not previously tested so that four rooms are sampled. If four rooms are not available, then each available room shall be retested. The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall evaluate the results of this testing to determine if the recleaned components meet the clearance level. The components must be recleaned and retested until the clearance level is met.

(9) The certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall compare the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. If the residual lead level in a composite dust sample is greater than or equal to the applicable clearance level divided by half the number of subsamples in the composite sample, then all the components represented by the failed composite dust sample shall be recleaned and retested until clearance levels are met.

c. In multifamily housing consisting of at least 20 similarly constructed and maintained residential dwellings, random selection for the purpose of clearance testing may be conducted if the following conditions are met:

(1) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall randomly select the dwellings that will be sampled. The contractors and the workers who conducted the lead abatement, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation do not know which residential dwellings will be selected for the random selection.

(2) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the minimum number of dwellings selected for dust sampling. This shall provide a 95 percent level of confidence that no more than 5 percent or 50 of the residential dwellings (whichever is smaller) in the randomly sampled population are greater than or equal to the appropriate clearance levels.

(3) The certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall sample the randomly selected residential dwellings and evaluate them for clearance according to the procedures found in paragraphs 70.6(6)*"h"* through *"j."*

(4) The clearance testing is conducted by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

d. A clearance report must be prepared that provides documentation of the lead abatement, renovation, or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 as well as the clearance testing. When lead abatement is performed, the report shall be a lead abatement report in accordance with paragraph 70.6(6)*"n."* When renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 is performed, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall prepare a written report for each residential dwelling or child-occupied facility where clearance testing is conducted. No later than 30 days after the property passes clearance, the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician shall send a copy of the report to the property owner and to the person requesting the clearance testing, if different. The clearance report shall include the following information:

(1) The address of the residential property and, if only part of a multifamily property is affected, the specific dwelling units and common areas affected.

(2) The following information regarding the clearance testing:

1. The date(s) of the clearance testing.

2. The name, address, and signature of each certified lead professional performing the clearance examination, including the certification number.

3. The name and certification number of the certified firm(s) conducting the clearance testing.

4. Whether or not containment was used and, if containment was used, the locations of the containment.

5. If random selection was used to select the residential dwellings that were sampled, the report shall state that random selection was used, the number of residential dwellings that were sampled, and how this number was determined.

6. The results of the visual inspection for the presence of deteriorated paint and visible dust, debris, residue, or paint chips in the rooms where renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation was conducted pursuant to 24 CFR Part 35.

7. All of the results of the analysis of dust samples, in micrograms per square foot, by location of sample. The results shall not be reported as "not detectable."

8. A statement that the renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation conducted pursuant to 24 CFR Part 35 was or was not done as specified and that the rooms and exterior areas where these activities were conducted

did or did not pass the visual clearance and the clearance dust testing. If the certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician conducting the clearance testing cannot verify that all lead-based paint hazards have been controlled, the report shall contain the following statement:

"The purpose of this clearance report is to verify that this lead hazard control project was done according to the project specifications. This residential dwelling may still contain hazardous lead-based paint, soil-lead hazards, or dust-lead hazards in the rooms or exterior areas that were not included in the lead hazard control project."

9. The name, address, and telephone number of each recognized laboratory conducting an analysis of the dust samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b)).

(3) The following information on the renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation pursuant to 24 CFR Part 35 for which clearance testing was performed:

1. The start and completion dates of the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation.

2. The name and address of each firm or organization conducting the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation and the name of each supervisor assigned.

3. A detailed written description of the renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation, including the methods used, locations of exterior surfaces, interior rooms, common areas, and components where the hazard reduction activity occurred.

4. If interim control of soil hazards was conducted, a detailed description of the location(s) of the interim controls and the method(s) used.

5. Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

6. Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70.

7. The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

e. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor or a certified sampling technician shall maintain a copy of the clearance testing information included in the lead abatement report specified in paragraph 70.6(6)*"m"* for no fewer than three years. A certified lead inspector/risk assessor, a certified elevated blood lead (EBL) inspector/risk assessor, or a certified sampling technician shall maintain a copy of the clearance testing report specified in paragraph 70.6(8)*"d"* for no fewer than three years.

f. Clearance testing shall be performed by persons or entities independent of those performing lead abatement, renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation, unless the designated party uses qualified in-house employees to conduct clearance testing. An in-house employee shall not conduct both lead abatement, renovation, interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation and the clearance examination for this work.

70.6(9) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall conduct paint testing pursuant to 24 CFR Part 35 according to the following standards.

Paint testing pursuant to 24 CFR Part 35 shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. When conducting paint testing in a residential dwelling or child-occupied facility, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following procedures:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall test paint on each deteriorated paint surface and on each painted surface that will be disturbed or replaced. On windows, the window frame, interior windowsill, window sash, and window trough shall each be tested.

(2) Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If testing by laboratory analysis, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect paint samples using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

3. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings at the beginning of the inspection.

4. If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation $(1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6$ and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

5. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading

for XRF readings that required substrate correction as positive, negative, or inconclusive, according to the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

6. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

b. If lead-based paint is identified through paint testing, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor must conduct a visual inspection to determine the presence of lead-based paint hazards and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated.

c. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where paint testing is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the inspection, if different. A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of each written report for no less than three years. The report shall include, at least:

(1) A statement that the inspection was conducted to determine whether lead-based paint is present on deteriorated paint surfaces and on painted surfaces that will be disturbed or replaced;

(2) Date of the testing;

(3) Address of building;

(4) Date of construction;

(5) Apartment numbers (if applicable);

(6) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(7) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the paint testing;

(8) Name and certification number of the certified firm(s) conducting the paint testing;

(9) Name, address, and telephone number of each laboratory conducting an analysis of collected samples;

(10) Each testing method and sampling procedure employed for paint analysis, including quality control data and, if used, the manufacturer, serial number, software, and operating mode of any X-ray fluorescence (XRF) analyzer;

(11) XRF readings taken for calibration and calculations to demonstrate that the XRF is properly calibrated;

(12) Specific locations by room of each painted component tested for the presence of lead-based paint and the results for each component expressed in terms appropriate to the sampling method used;

(13) A statement that all painted or finished components that were not tested must be assumed to contain lead-based paint;

(14) A description of the location, type, and severity of identified lead-based paint hazards, including the classification of each tested surface as to whether it is a lead-based paint hazard, and any other potential lead hazards, including bare soil in the dripline of a home where lead-based paint is identified on exterior components or lead-based paint previously existed on exterior components, but has been removed, enclosed, or encapsulated;

(15) A description of interim controls and lead abatement options for each identified lead-based paint hazard and a suggested prioritization for addressing each hazard. If the use of an encapsulant or enclosure is recommended, the report shall recommend a maintenance and monitoring schedule for the encapsulant or enclosure;

(16) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(17) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(18) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(10) A certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor must conduct reevaluations according to the following standards. Reevaluations shall be conducted only by a certified lead inspector/risk assessor or a certified elevated blood lead (EBL) inspector/risk assessor.

a. All available information regarding lead-based paint for the property being reevaluated shall be reviewed, including but not limited to reports of any lead-based paint activities conducted in a residential dwelling, multifamily dwelling, or child-occupied facility.

b. A visual inspection of the property shall be undertaken to locate the existence of deteriorated paint; bare soil; recommended lead abatement, interim controls, or standard treatments that were not implemented; and failed interim controls, standard treatments, encapsulation, or enclosure.

c. Deteriorated paint for which the lead content is unknown shall be tested for the presence of lead.

d. Soil samples shall be collected and analyzed from bare soil for which the lead content is unknown. Soil samples shall be collected using the documented methodologies specified in guidance documents issued by the department and shall be analyzed by a recognized laboratory to determine the level of lead.

e. If any lead-based paint hazards, recommended lead abatement, interim controls, or standard treatments that were not implemented, or failed interim controls, standard treatments, encapsulation, or enclosure is identified, then the reevaluation is failed. These conditions shall be controlled through lead abatement or interim controls before the reevaluation can continue. Clearance testing shall be conducted following control of the conditions through lead abatement or interim controls.

f. If there are no lead-based paint hazards present and all of the recommended lead abatement or interim controls were implemented and have not failed, then single-surface or composite dust samples shall be collected. The reevaluation is passed if all of the dust samples taken are below the clearance level.

g. In residential dwellings, single-surface or composite dust samples shall be collected from floors and interior windowsills in at least four rooms, hallways, or stairwells where at least one child under the age of six years is most likely to come in contact with dust.

h. In multifamily dwellings, single-surface or composite dust samples shall also be collected from common areas where at least one child under the age of six years is likely to come in contact with dust.

i. In child-occupied facilities, single-surface or composite dust samples shall be collected from the floor and interior windowsill in at least four rooms, hallways, or stairwells utilized by one or more children under the age of six years and in other common areas where the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor determines that at least one child under the age of six years is likely to come in contact with dust.

j. Dust samples shall be collected by wipe samples using the documented methodologies specified in guidance documents issued by the department. The minimum area for a floor wipe sample shall be 0.50 square feet or 72 square inches. The minimum area for a windowsill wipe sample and for a window trough wipe sample shall be 0.25 square feet or 36 square inches. Dust samples shall be analyzed by a recognized laboratory to determine the level of lead.

k. Paint shall be tested using adequate quality control by X-ray fluorescence or by laboratory analysis using a recognized laboratory to determine the presence of lead-based paint on a surface. If tested by laboratory analysis, the paint shall be sampled using the documented methodologies specified in guidance documents issued by the department. If testing by X-ray fluorescence, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the following methodologies:

(1) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use an X-ray fluorescence analyzer that has a performance characteristics sheet and shall use the X-ray fluorescence analyzer according to the performance characteristics sheet.

(2) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use the NIST 1.02 standard film or standards provided by the manufacturer for calibration of the X-ray fluorescence analyzer. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not state that any surface is free of lead-based paint unless the NIST 1.02 standard film is used for calibration.

(3) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall take calibration readings consisting of an average of three readings.

(4) If recommended by the performance characteristics sheet, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall conduct substrate correction for all XRF readings less than 4.0 milligrams of lead per square centimeter. For each substrate that requires substrate correction, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall completely remove all paint from an area of two different testing combinations for that substrate. If possible, the areas chosen for substrate correction should have initial XRF readings of less than 2.5 milligrams of lead per square centimeter. For each testing combination, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall remove paint from an area that is at least as large as the XRF probe faceplate. On each of the two areas, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall place the NIST 1.02 standard film over the surface, and take three XRF readings with the XRF used to conduct the inspection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean for these six readings and shall subtract 1.02 from this arithmetic mean to obtain the substrate correction value. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall then subtract the substrate correction value from each XRF reading for the substrate requiring substrate correction to obtain the corrected XRF reading. For example, if the six readings taken on the NIST 1.02 standard film were 1.1, 1.3, 1.4, 1.0, 1.2, and 1.1, the arithmetic mean is calculated by the equation (1.1 + 1.3 + 1.4 + 1.0 + 1.2 + 1.1)/6 and is equal to 1.18. The substrate correction value is equal to 1.18 minus 1.02, or 0.16. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not conduct substrate correction where recommended by the performance characteristics sheet, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that all of the readings are positive and shall not state that a surface is free of lead-based paint.

(5) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall classify each XRF reading that did not require substrate correction and each corrected XRF reading for XRF readings that required substrate correction as positive, negative, or inconclusive, according to

the performance characteristics sheet for the XRF. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not discard XRF readings unless instructed to do so by the performance characteristics sheet or the operating instructions from the manufacturer. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor believes that a reading classified as positive is in error, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall collect a paint sample for laboratory analysis. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall change the positive classification to negative only if the results of the laboratory analysis indicate that the surface is not painted with lead-based paint. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume that all inconclusive readings are positive and classify them as such.

(6) The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall resolve inconclusive readings as defined by the performance characteristics sheet for the XRF by collecting paint samples for laboratory analysis. If the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor does not resolve inconclusive readings by laboratory analysis, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the inconclusive readings are positive.

l. When conducting reevaluation in multifamily housing, a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor may sample each residential dwelling or choose residential dwellings for sampling by random selection, targeted selection, or worst case selection.

(1) If built before 1960 or if the date of construction is unknown, the multifamily housing shall contain at least 20 similarly constructed and maintained residential dwellings in order to use random selection. If built from 1960 to 1977, the multifamily housing shall contain at least 10 similarly constructed and maintained residential dwellings in order to use random selection. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 1 to determine the number of residential dwellings to randomly select for testing.

(2) If the multifamily housing contains 5 or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use targeted selection. If using targeted selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than 5 similar dwellings, all residential dwellings shall be tested. Residential dwellings chosen by targeted selection shall meet as many of the following criteria as possible. If additional residential dwellings are needed to meet the minimum number specified in Table 2, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall select them randomly. If too many residential dwellings meet the criteria, residential dwellings shall be eliminated randomly. Targeted selection criteria are as follows:

1. The residential dwelling has been cited with a housing or building code violation within the past year.
2. The property owner believes that the residential dwelling is in poor condition.
3. The residential dwelling contains two or more children between the ages of six months and six years. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall give preference to residential dwellings that house the largest number of children.
4. The residential dwelling serves as a child-occupied facility.
5. The residential dwelling has been prepared for reoccupancy within the past three months.

(3) If the multifamily housing contains 5 or more similar residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may use worst case selection. If using worst case selection, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall use Table 2 to determine the number of residential dwellings to test. If the multifamily housing has fewer than 5 similar dwellings, all residential dwellings shall be tested.

(4) The following standards shall be used to determine the extent of lead-based paint hazards throughout multifamily housing that is sampled by random selection, targeted selection, or worst case selection:

1. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall calculate the arithmetic mean of the dust-lead levels for carpeted floors, uncarpeted floors, interior windowsills, and window troughs. If the arithmetic mean is greater than or equal to the level defined as a dust-lead hazard for the component, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust-lead hazard has been identified on the component throughout the multifamily housing. If the arithmetic mean is less than the level defined as a dust-lead hazard for the component, but some of the individual components have dust-lead levels that are greater than or equal to the level defined as a dust-lead hazard, then the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall determine that a dust-lead hazard has been identified on the individual components and on all other similar components throughout the multifamily housing.

2. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall evaluate the results of paint sampling by component and location. If all components at a given location are determined to be painted with lead-based paint or are determined not to be painted with lead-based paint, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor may assume this condition is true for all similar residential dwellings. The certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall not assume that the multifamily housing is free of lead-based paint. If a component at a given location is found to be painted with lead-based paint in some residential dwellings and not painted with lead-based paint in other residential dwellings, the certified lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor shall assume that the component is a lead-based paint hazard in all similar residential dwellings.

m. If reevaluation is conducted, the first reevaluation shall be conducted no later than two years from completion of lead abatement, interim controls, or standard treatments. Subsequent reevaluation shall be conducted at intervals of two years, plus or minus 60 days. To be exempt from additional reevaluation, a residential dwelling or child-occupied facility shall have at least two consecutive passing reevaluations conducted at such two-year intervals. If, however, a reevaluation fails, at least two more consecutive reevaluations conducted at such two-year intervals must be conducted.

n. A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall prepare a written report for each residential dwelling or child-occupied facility where a reevaluation is conducted. No later than three weeks after the receipt of laboratory results, the certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall send a copy of the report to the property owner and to the person requesting the reevaluation, if different. A certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall maintain a copy of the report for no less than three years. The report shall include, at least:

(1) Date of each reevaluation;

(2) Address of building;

(3) Date of construction;

(4) Apartment numbers (if applicable);

(5) The name, address, and telephone number of the owner or owners of each residential dwelling or child-occupied facility;

(6) Name, signature, and certification number of each certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor conducting the reevaluation;

(7) Name and certification number of the certified firm(s) conducting the reevaluation;

(8) All of the information gathered for the review as outlined in 70.6(10)*"a"*;

(9) Results of the visual inspection including details of any newly identified lead-based paint hazards, the status of past lead hazard control measures, and repair options for any lead-based paint hazards identified during the reevaluation;

(10) An indication of whether or not the property passed or failed the reevaluation;

(11) An indication of when the next reevaluation, if any, should occur;

(12) The results of any environmental samples taken, including all XRF readings, all laboratory analyses and clearance testing results, if necessary;

(13) Name, address, and telephone number of each recognized laboratory conducting an analysis of collected samples, including the identification number for each such laboratory recognized by EPA under Section 405(b) of the Toxic Substances Control Act (15 U.S.C. 2685(b));

(14) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745;

(15) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation found in 641—Chapter 70; and

(16) The report shall contain the following statement:

"The location and nature of this inspection are required to be reported to the Iowa Department of Public Health for tracking purposes. The Iowa Department of Public Health may review this report for compliance purposes. It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a sampling technician, lead inspector/risk assessor or elevated blood lead (EBL) inspector/risk assessor certified according to Iowa Administrative Code 641—70.3(135) and 70.5(135)."

70.6(11) All renovations performed in target housing and child-occupied facilities, except for emergency renovations and minor repair and maintenance activities, shall be performed according to the work practice standards in 70.6(11). Renovation activities conducted in housing or on surfaces determined to be free of lead-based paint by a certified lead inspector/risk assessor or certified elevated blood lead (EBL) inspector/risk assessor shall be exempt from all work practice standards except record keeping. All renovations shall be performed by a certified firm under the supervision of a certified lead abatement contractor or a certified lead abatement worker who completes initial certification on or after January 13, 2010, or if certified prior to January 13, 2010, completes a lead abatement worker, lead abatement contractor, or lead-safe renovator refresher course on or after January 13, 2010, or shall be performed by a certified lead-safe renovator in accordance with the requirements below.

a. A firm shall assign at least one certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator to each individual renovation project. The certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator assigned to each individual renovation project shall ensure the following:

(1) A certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator must be on site during all worksite preparation and during the cleanup of work areas. At all other times when renovation is being conducted, a certified lead abatement contractor, a certified lead abatement worker, or a certified lead-safe renovator shall be on site or available by telephone, pager, or answering service and be able to be present at the worksite in no more than two hours.

(2) Signs are posted and readable. All signs must be posted before the renovation begins and must remain in place until the postrenovation cleaning verification has been completed.

1. To the extent practicable, all signage must be posted in the occupants' primary language.
2. The signs must clearly define the work area.
3. The signs must warn occupants and other persons not involved with the renovation activity to remain outside the work area.
4. The signs must be posted at the entrance(s) to all work areas.

(3) The work area must be effectively contained before the renovation is begun. To be effective, containment must:

1. Isolate the work area so that no dust or debris leaves the work area while the renovation is being performed.
2. Be monitored and maintained so that any plastic or other impermeable materials are not torn or displaced.
3. Be installed in such a manner that it does not interfere with occupant and worker egress in an emergency.

(4) For interior renovations, containment shall include:

1. The removal or covering of all objects from the work area, including but not limited to furniture, rugs, and window coverings. Objects that are not removed from the work area must be covered with plastic sheeting or other impermeable material with all seams and edges taped or otherwise sealed.

2. Closing and covering all duct openings in the work area. Ducts must be covered with plastic sheeting or other impermeable material that is taped down.

3. Closing windows and doors in the work area. Doors must be covered with plastic sheeting or other impermeable material. Doors used as an entrance to the work area must be covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

4. Covering the floor surface, including installed carpet, with taped-down plastic sheeting or other impermeable material in the work area six feet beyond the perimeter of the surfaces undergoing renovation or a sufficient distance to contain the dust, whichever is greater.

5. Ensuring that all personnel, tools, and other items, including the exteriors of containers of waste, are free of dust and debris before leaving or being removed from the work area.

(5) For exterior renovations, containment shall include:

1. Closing all doors and windows within 20 feet of the renovation. On multistory buildings, all doors and windows within 20 feet of the renovation on the same story as the renovation shall be closed, and all doors and windows on all stories below the renovation that are the same horizontal distance from the renovation shall be closed.

2. Ensuring that doors within the work areas that will be used while the renovation is being performed are covered with plastic sheeting or other impermeable material in a manner that allows workers to pass through while confining dust and debris to the work area.

3. Covering the ground with plastic sheeting or other disposable impermeable material extending 10 feet beyond the perimeter of surfaces undergoing renovation or a sufficient distance to collect falling paint debris, whichever is greater, unless the property line prevents 10 feet of such ground cover. Exterior ground cover shall include anchors or weights to ensure the covering remains effective even during weather conditions such as high wind.

4. Vertical containment. In certain situations, such as where other buildings are in close proximity to the work area, when conditions are windy, or where the work area abuts a property line, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall erect a system of vertical containment designed to prevent dust and debris from migrating to adjacent property or contaminating the ground, other buildings, or any object beyond the work area.

(6) Prohibited practices are not used during the renovation. Prohibited practices include:

1. Open-flame burning or torching of paint.

2. Machine sanding or grinding or abrasive blasting or sandblasting of paint unless used with high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at 99.97 percent or greater efficiency.

3. Uncontained water blasting of paint.

4. Dry scraping or dry sanding of paint except in conjunction with the use of a heat gun or around electrical outlets.

5. Operating a heat gun at a temperature at or above 1100 degrees Fahrenheit.

(7) All workers that are not certified lead abatement contractors, certified lead abatement workers, or certified lead-safe renovators must have on-the-job training as required by 70.6(11)*"d."* However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR 35.1340.

(8) If desired, perform all testing with recognized test kits in accordance with 70.6(11)*"e."*

(9) Perform the postrenovation cleaning verification as outlined in 70.6(11)*"b."*

(10) All waste generated during renovation activities is contained to prevent the release of dust and debris before the waste is removed from the work area for storage or disposal. Any chutes used to remove waste from the work area shall be covered.

1. At the conclusion of each workday and at the conclusion of the renovation, waste that has been collected from renovation activities must be stored under containment, in an enclosure, or behind

a barrier that prevents release of dust and debris out of the work area and prevents access to dust and debris.

2. All waste from renovation activities must be contained during transportation so that no dust or debris is released.

(11) The work area shall be cleaned so that no dust, debris, or residue remains after the renovation. Cleaning shall include:

1. The collection of all paint chips and debris and, without dispersing the paint chips and debris, the sealing of the materials in heavy-duty bags.

2. The removal of the protective sheeting used as required in this subrule. The sheeting shall be misted, then the sheeting shall be folded dirty side inward. All sheeting shall be taped shut or otherwise sealed inside heavy-duty bags. Sheeting used to separate work areas from non-work areas must remain in place until after the cleaning and removal of other sheeting. All sheeting shall be disposed of as waste.

3. For interior renovations, all objects and surfaces in the work area and within two feet of the work area must be cleaned from high to low in the following manner:

- Walls must either be vacuumed with a HEPA vacuum or wiped with a wet cloth, beginning at the ceiling and working toward the floor.
- All remaining surfaces including objects and fixtures must be thoroughly vacuumed with a HEPA vacuum. For carpeted floors and rugs, the HEPA vacuum must be equipped with a beater bar.
- All remaining surfaces, except for carpeted or upholstered surfaces, must also be wiped with a damp cloth. Uncarpeted floors must be thoroughly mopped using a method that keeps the wash water separate from the rinse water, such as the two-bucket mopping method, or using a wet mopping system.

b. Postrenovation cleaning verification. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall use the following procedure for conducting postrenovation cleaning verification. In lieu of postrenovation cleaning verification, clearance testing as outlined in 70.6(8) can be performed. If the work is done in response to an elevated blood lead (EBL) inspection, clearance testing shall be performed by a certified elevated blood lead (EBL) inspector/risk assessor in lieu of postrenovation cleaning verification. Warning signs may be removed after all of the work areas in a renovation project have been adequately cleaned and verified or passed clearance testing.

(1) For interior renovations, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall perform a visual inspection to determine whether dust, debris, or residue is still present. If dust, debris, or residue is still present, these conditions must be removed by recleaning, and another visual inspection must be performed. Following a successful visual inspection, a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator must:

1. Verify that each windowsill and window trough in the work area has been adequately cleaned, using the following procedure:

- Wipe the windowsill and window trough with a wet disposable cleaning cloth that is damp to the touch. If the cloth matches or is lighter than the cleaning verification card, the windowsill has been adequately cleaned.
- If the cloth does not match and is darker than the cleaning verification card, reclean the windowsill or window trough as directed in 70.6(11)*"a"*(11). Then wipe the windowsill or window trough again, using a new cloth or the same cloth folded in such a way that an unused surface is exposed. If the cloth matches or is lighter than the cleaning verification card, that windowsill has been adequately cleaned.
- If the cloth does not match and is darker than the cleaning verification card, wait for one hour or until the surface has dried completely, whichever is longer.
- After waiting for the windowsill or window trough to dry, wipe the windowsill or window trough with a dry disposable cleaning cloth. After this wipe, that windowsill or window trough has been adequately cleaned.

2. Verify that uncarpeted floors and countertops in the work area have been adequately cleaned, using the following procedure. If the surface within the work area is greater than 40 square feet, the

surface within the work area must be divided into roughly equal sections that are each less than 40 square feet.

- Wipe uncarpeted floors and countertops within the work area with a wet disposable cleaning cloth. Floors must be wiped using an application device with a long handle and a head to which the cloth is attached. The cloth must remain damp at all times while it is being used to wipe the surface for postrenovation cleaning verification. Wipe each such section separately with a new wet disposable cleaning cloth. If the cloth used to wipe each section of the surface within the work area matches or is lighter than the cleaning verification card, the surface has been adequately cleaned.
- If the cloth does not match and is darker than the cleaning verification card, reclean the surface as in 70.6(11)*"a"*(11). Then wipe the floor or countertop again, using a new cloth. If the cloth matches or is lighter than the cleaning verification card, that surface has been adequately cleaned.
- If the cloth does not match and is darker than the cleaning verification card, wait for one hour or until the surface has dried completely, whichever is longer.
- After waiting for the surface to dry, wipe each section of the surface that has not yet achieved the postrenovation cleaning verification with a dry disposable cleaning cloth. After this wipe, that surface has been adequately cleaned.

(2) For exterior renovations, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall perform a visual inspection to determine whether dust, debris, or residue is still present on surfaces in and below the work area, including windowsills and the ground. If dust, debris, or residue is present, these conditions must be eliminated and another visual inspection must be performed. When the area passes the visual inspection, the exterior has been adequately cleaned.

(3) A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall only use cleaning verification cards that are approved by the U.S. Environmental Protection Agency (EPA).

(4) A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall not use cleaning verification cards that have expired.

c. Clearance testing. Postrenovation cleaning verification is not required if the contract between the renovation firm and the person contracting for the renovation or another federal, state, territorial, tribal, or local law or regulation requires the renovation firm to perform clearance testing at the conclusion of a renovation covered by this chapter.

(1) The dust samples must be collected by a certified lead inspector/risk assessor, certified elevated blood lead (EBL) inspector/risk assessor, or certified sampling technician. If the work is done in response to an elevated blood lead (EBL) inspection, the dust samples must be collected by a certified elevated blood lead (EBL) inspector/risk assessor.

(2) The firm conducting the renovation is required to reclean the work area until the dust clearance sample results are below the clearance standards in subrule 70.6(8).

d. On-the-job training. The certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator assigned to the renovation project shall ensure that each noncertified individual conducting renovation activities has been or is currently being trained on how to safely conduct renovation activities. However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR Part 35.

(1) All on-the-job training shall be conducted by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator.

(2) Each noncertified individual shall be trained by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator who is employed by the same certified firm. A certified firm shall not accept on-the-job training that was performed by another firm. On-the-job training does not meet the requirement for work conducted pursuant to 24 CFR Part 35.

(3) On-the-job training shall be specific for the type of work the noncertified individual is performing and must include at least the following topics:

1. An overview of the requirements described in this chapter.
2. An overview of the health effects of lead poisoning.

3. Methods to prevent taking lead dust home from the worksite.
4. How and why to properly set up a work area for lead-safe renovations.
5. How and where to properly post signage.
6. Personal protection.
7. How and why to properly set up containment.
8. How and why to minimize dust and debris.
9. Proper cleaning techniques and time lines for cleaning in renovation activities.
10. How to properly handle and control waste generated from renovation activities.
11. An overview of the postrenovation cleaning verification and clearance testing.
12. An overview of the prerenovation notification requirements found in 641—Chapter 69.
13. Prohibited work practices.

e. Recognized test kits. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator may use recognized test kits to determine whether surfaces to be affected by renovation activities are painted with lead-based paint. The result from each individual test performed applies only to the individual surface tested. Surfaces which are determined by proper use of a recognized test kit to be free of lead-based paint are exempt from the requirements of 70.6(11)*"a"* through *"d."* Results obtained from recognized test kits are only valid if the testing was performed according to the manufacturer's directions. Any results from test kits which are not recognized shall be invalid. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall not discard a valid result from a recognized test kit.

f. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator must complete a written report when conducting a renovation. The report shall include the results of any testing performed with a recognized test kit, information regarding the work practices used in the renovation and, if applicable, a copy of the clearance testing report. When the final invoice for the renovation is delivered or within 30 days after the renovation activity is complete, whichever is earlier, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to the owner of the building. If the renovation took place within a residential dwelling, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to an adult occupant of the residential dwelling and to the person requesting the renovation, if different from the owner. If the renovation took place within a child-occupied facility, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall send a copy of the report to an adult representative of the child-occupied facility and to the person requesting the renovation, if different from the owner. If the renovation took place within common areas of multifamily target housing, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall post in areas where it is likely to be seen by the occupants of all of the affected units the report required by this paragraph or instructions on how interested occupants can obtain a copy of this report at no charge. If the renovation took place within a child-occupied facility, the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall post in areas where it is likely to be seen by the parents or guardians of children frequenting the child-occupied facility the report required by this paragraph or instructions on how interested parents or guardians of children frequenting the child-occupied facility can obtain a copy of this report at no charge. A certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator shall maintain a copy of the report for no less than three years. The report shall include, at least:

(1) The date(s) of the renovation.

(2) Address of the building, including apartment numbers, if applicable.

(3) The name, address, and telephone number of the owner(s) of the address(es) where the renovation took place.

(4) The name, address, signature, certification number, and telephone number of the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator who performed the renovation.

(5) The name and certification number of the certified firm performing the renovation.

(6) If testing was performed with a recognized test kit, the location of each test. The location shall be specific to the room and component.

(7) The results of testing. The results shall be classified as either positive for lead-based paint or negative for lead-based paint.

(8) The name and manufacturer of the recognized test kit(s) used, the expiration date, and the EPA approval number.

(9) The work practices used in the renovation, including the location(s) where each work practice was used. The location shall be specific to the room and component.

(10) If applicable, a copy of the clearance report.

(11) Information regarding the owner's obligations to disclose known lead-based paint and lead-based paint hazards upon sale or lease of residential property as required by Subpart H of 24 CFR Part 35 and Subpart I of 40 CFR Part 745.

(12) Information regarding Iowa's prerenovation notification requirements found in 641—Chapter 69; and information regarding Iowa's regulations for renovation, remodeling and repainting found in 641—Chapter 70.

g. Record keeping. Records shall be kept for each renovation project that involves target housing or child-occupied facilities. The records for each renovation shall include:

(1) The name and certification number of the certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator responsible for the renovation.

(2) The name and certification number of the certified firm that performed the renovation.

(3) The address(es) of the property where the renovation activity was performed.

(4) The name, address, and telephone number of the property owner where the renovation activity was performed.

(5) Renovations considered emergency pursuant to 641—70.2(135) shall contain a description of the circumstances explaining why the renovations were immediately required and which work practice standards were not followed as a result.

(6) Any reports or documentation completed by a certified lead professional concerning the renovation project, including documentation from certified lead inspector/risk assessors or certified elevated blood lead (EBL) lead inspector/risk assessors regarding housing, components, or surfaces that have been determined to be free of lead-based paint and clearance reports from clearance testing performed in lieu of postrenovation cleaning verification.

(7) Documentation that each noncertified individual working on the renovation project had, or was receiving, the appropriate on-the-job training outlined in 70.6(11)*"d."* The documentation must include the names of all of the noncertified individuals who worked on the renovation. However, on-the-job training does not meet the training requirement for work conducted pursuant to 24 CFR 35.1340.

(8) Documentation that the certified lead-safe renovator followed the work practices for renovation activities outlined in 70.6(11). This shall include documentation that the following work practices were followed:

1. Signs were posted at the entrance to the work area.
2. The work area was contained.
3. All objects in the work area were covered or removed.
4. All HVAC ducts in the work area were closed and covered.
5. All windows in the work area were closed, and all windows within 20 feet of exterior work areas were closed.
6. All doors not used to enter the work area were closed and sealed, and all doors within 20 feet of exterior work areas were closed and sealed.
7. All doors used as an entrance to the work area had containment in place to prevent the spread of dust and debris.
8. All floors in the work area were covered for a sufficient distance to contain the dust and debris from the renovation.
9. Adequate ground cover was in place to contain the dust and debris for exterior renovations.

10. Adequate vertical containment was in place to contain the dust and debris for exterior renovations.

11. All waste generated during the renovations was contained throughout the renovation and the transportation to disposal.

(9) Documentation that the renovation work area was cleaned and passed the postrenovation cleaning verification procedures outlined in 70.6(11)*"b,"* including the expiration date of the cleaning verification cards used.

(10) Documentation regarding the use of any recognized test kits outlined in 70.6(11)*"e."* The documentation shall include a copy of the written report required by 70.6(11)*"f."*

h. Emergency renovations.

(1) Renovation activities that are deemed to be an emergency are exempt from the certification requirements and all of the work practice standards, except for the cleaning requirements, postrenovation cleaning verification, and the written report required by 70.6(11)*"f."* All postrenovation cleaning must take place under the direction of a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator. The postrenovation cleaning verification after an emergency renovation must be performed by a certified lead abatement contractor, certified lead abatement worker, or certified lead-safe renovator.

(2) Emergency renovations that are required as a result of an elevated blood lead (EBL) inspection are initially exempt from the certification requirements. The work practice standards found in 70.6(11)*"a"* shall apply. All individuals who perform emergency renovations in response to an elevated blood lead (EBL) inspection are required to obtain certification as a lead-safe renovator, lead abatement contractor, or lead abatement worker within six months from the date the elevated blood lead (EBL) inspection report was issued. Renovations and interim controls performed in response to an elevated blood lead (EBL) inspection are required to pass clearance testing that is performed by a certified elevated blood lead (EBL) inspector/risk assessor.

70.6(12) A certified elevated blood lead (EBL) inspection agency shall maintain for a period of at least 10 years the written records for all elevated blood lead (EBL) inspections conducted by persons that the agency employs or contracts with to provide elevated blood lead (EBL) inspections in the agency's service area.

70.6(13) A person may be certified as a lead inspector/risk assessor, sampling technician, or elevated blood lead (EBL) inspector/risk assessor and as a lead abatement contractor or lead abatement worker. Except as specified by paragraph 70.6(6)*"k"* and paragraph 70.6(8)*"f,"* a person who is certified both as a lead inspector/risk assessor, sampling technician, or elevated blood lead (EBL) inspector/risk assessor and as a lead abatement contractor or lead abatement worker shall not provide both lead inspection or visual risk assessment and lead abatement services at the same site unless a written consent or waiver, following full disclosure by the person, is obtained from the owner or manager of the site.

70.6(14) Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in subrules 70.6(1) to 70.6(6) and 70.6(9) shall be collected by persons certified as a lead inspector/risk assessor or an elevated blood lead (EBL) inspector/risk assessor. Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in subrule 70.6(8) for clearance testing following lead abatement shall be collected by persons certified as a lead inspector/risk assessor or an elevated blood lead (EBL) inspector/risk assessor. Any dust or soil samples collected pursuant to the work practice standards contained in subrule 70.6(8) for clearance testing after renovation or interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, and rehabilitation pursuant to 24 CFR Part 35 shall be collected only by certified sampling technicians, certified lead inspector/risk assessors, or certified elevated blood lead (EBL) inspector/risk assessors. Any paint chip, dust, or soil samples collected pursuant to the work practice standards contained in 641—70.6(135) shall be analyzed by a recognized laboratory.

70.6(15) Composite dust sampling shall be conducted only in the situations specified in subrules 70.6(4) to 70.6(6) and 70.6(8). If composite sampling is conducted, it shall meet the following requirements:

a. Composite dust samples shall consist of at least two subsamples.

b. Every component that is being tested shall be included in the sampling.

c. Composite dust samples shall not consist of subsamples from more than one type of component.

d. The results of composite dust samples shall be evaluated by comparing the residual lead level as determined by the laboratory analysis from each composite dust sample with applicable single-surface dust-lead hazard or clearance levels for lead in dust on floors, interior windowsills, and window troughs divided by half the number of subsamples in the composite sample. For example, the applicable clearance level for a composite window trough sample consisting of three subsamples would be 267 micrograms per square foot (400/1.5).

70.6(16) Reporting lead-based paint activities. A certified sampling technician, lead inspector risk/assessor, and elevated blood lead (EBL) inspector risk/assessor shall report to the department quarterly all lead-based paint activities that they perform. Lead-based paint activities include: lead-free inspections, lead inspections, risk assessments, lead hazard screens, visual risk assessments, and clearance testing.

a. Each certified sampling technician, lead inspector risk/assessor, and elevated blood lead (EBL) inspector/risk assessor shall provide the following information to the department electronically in a format specified by the department:

(1) Name and certification number of the certified sampling technician, lead inspector/risk assessor, or elevated blood lead (EBL) inspector/risk assessor who performed the lead-based paint activity.

(2) Name, address, telephone number, and certification number of the certified firm that performed the lead-based paint activity.

(3) Address where the activity took place. For each address, the report shall specify:

1. The type of activity.
2. Whether or not lead-based paint was identified, including paint assumed to be lead-based paint.
3. Whether or not lead-based paint hazards were identified, including assumed hazards.
4. Whether or not the address was free of lead-based paint pursuant to the requirements outlined in subrule 70.6(1).

b. Reports shall be due on January 15, April 15, July 15, and October 15 of each year.

[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.7(135) Firms. All firms that perform or offer to perform lead-based paint activities must be certified by the department. Firms shall employ only appropriately certified employees to conduct lead-based paint activities, and the firm and its employees shall follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities. A firm must employ at least one certified individual in order to receive or maintain firm certification. Beginning April 22, 2010, firms that perform or offer to perform renovation must be certified by the department.

70.7(1) A firm wishing to be certified shall apply on forms supplied by the department. The firm must submit:

a. A completed application form.

b. Documentation that the firm will employ only appropriately certified lead professionals to perform lead-based paint activities. In addition, the firm must document that the agency and its employees or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.

c. The certified firm must maintain all records required by 641—70.6(135), with the exception of elevated blood lead (EBL) inspection reports, for three years. Certified firms that are also certified as elevated blood lead (EBL) inspection agencies must maintain elevated blood lead (EBL) inspection reports for at least 10 years.

70.7(2) Firms must be recertified each year. To be recertified, the firm must submit the following:

a. A completed application form.

b. Documentation that the firm will employ only appropriately certified lead professionals to perform lead-based paint activities. In addition, the firm must document that the firm and its employees

or contractors will follow the work practice standards in 641—70.6(135) for conducting lead-based paint activities.
[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.8(135) Lead-safe work practices training program approval and lead-safe work practices contractor registration. Rescinded IAB 2/10/10, effective 1/13/10.

641—70.9(135) Compliance inspections.

70.9(1) The department may enter premises or facilities where violations of the provisions regarding lead-based paint activities may occur for the purpose of conducting compliance inspections.

70.9(2) The department may enter premises or facilities where training programs conduct business.

70.9(3) The department may take samples and review records as part of the lead-based paint activities compliance inspection process.

70.9(4) The department may review all reports involving lead-based paint activities.

70.9(5) The department may issue subpoenas pursuant to 641—Chapter 173, Iowa Administrative Code, for the purposes of determining compliance.
[**ARC 8502B**, IAB 2/10/10, effective 1/13/10]

641—70.10(135) Denial, suspension, or revocation of certification; denial, suspension, revocation, or modification of course approval; and imposition of penalties.

70.10(1) When the department finds that the applicant, certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm has committed any of the following acts, the department may deny an application for certification, may suspend or revoke a certification, may prohibit specific work practices, may require a project conducted by persons or firms that are not certified or a project where prohibited work practices are being used to be halted, may require the cleanup of lead hazards created by the use of prohibited work practices, may impose a civil penalty, may place on probation, may require additional education, may require reexamination of the state certification examination, may issue a warning, may refer the case to the office of the county attorney for possible criminal penalties pursuant to Iowa Code section 135.38, or may impose other sanctions allowed by law as may be appropriate.

a. Failure or refusal to comply with any requirements of this chapter.

b. Failure or refusal to establish, maintain, provide, copy, or permit access to records or reports as required by rules 641—70.3(135) to 70.7(135).

c. Failure or refusal to permit entry or inspection as described in subrules 70.9(1) to 70.9(3).

d. Obtaining certification through fraudulent representation.

e. Failure to obtain certification from the department and performing work requiring certification.

f. Fraudulently obtaining certification and engaging in any lead-based paint activities requiring certification.

g. Conducting any part of a lead-based paint activity that requires certification without being certified or with a certification that has lapsed.

h. Obtained documentation of training through fraudulent means.

i. Gained admission to an accredited training program through misrepresentation of admission requirements.

j. Obtained certification through misrepresentation of certification requirements or related documents pertaining to education, training, professional registration, or experience.

k. Performed work requiring certification at a job site without having proof of current certification.

l. Permitted the duplication or use of the individual's or firm's own certificate by another.

m. Failed to follow the standards of conduct required by 641—70.6(135).

n. Failed to comply with federal, state, or local lead-based paint statutes and regulations, including the requirements of this chapter.

o. Performed work for which certification is required with employees or persons under the control of the certified elevated blood lead (EBL) inspection agency or certified firm who were not appropriately certified.

p. Knowingly made misleading, deceptive, untrue, or fraudulent representations in the practice of lead professional activities or engaged in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.

q. Used untruthful or improbable statements in advertisements. This includes, but is not limited to, an action by a lead professional making information or intention known to the public that is false, deceptive, misleading, or promoted through fraud or misrepresentation.

r. Falsified reports and records required by this chapter.

s. Accepted any fee by fraud or misrepresentation.

t. Negligence by the firm or individual in the practice of lead professional activities. This includes a failure to exercise due care, including negligent delegation of duties or supervision of employees or other individuals, whether or not injury results; or any conduct, practice, or conditions that impair the ability of the firm or individual to safely and skillfully practice the profession.

u. Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the records of the board.

v. Failed to comply with the terms of a department order or the terms of a settlement agreement or consent order.

w. Representation by a firm or individual that the firm or individual is certified when the certification has been suspended or revoked or has not been renewed.

x. Failed to respond within 20 days of receipt of communication from the department that was sent by registered or certified mail.

y. Engaged in any conduct that subverts or attempts to subvert a department investigation.

z. Failed to comply with a subpoena issued by the department or failure to cooperate with a department investigation.

aa. Failed to pay costs assessed in any disciplinary action.

ab. Been convicted of a felony or misdemeanor related to lead professional activities or the conviction of any felony or misdemeanor that would affect the ability of the firm or individual to perform lead professional activities. A copy of the record of conviction or plea of guilty shall be conclusive evidence.

ac. Unethical conduct. This includes, but is not limited to, the following:

(1) Verbally or physically abusing a client or coworker.

(2) Improper sexual conduct with or making suggestive, lewd, lascivious, or improper remarks or advances to a client or coworker.

(3) Engaging in a professional conflict of interest.

(4) Mental or physical inability reasonably related to and adversely affecting the ability of the firm or individual to practice in a safe and competent manner.

(5) Being adjudged mentally incompetent by a court of competent jurisdiction.

(6) Habitual intoxication or addiction to drugs.

1. The inability of a lead professional to practice with reasonable skill and safety by reason of the excessive use of alcohol on a continuing basis.

2. The excessive use of drugs which may impair a lead professional's ability to practice with reasonable skill or safety.

3. Obtaining, possessing, attempting to obtain or possess, or administering controlled substances without lawful authority.

70.10(2) Reserved.

70.10(3) The department may deny, suspend, revoke, or modify the approval for a course, or may place on probation, or impose other sanctions allowed by law as may be appropriate, or may impose a civil penalty or may refer the case to the office of the county attorney for possible criminal penalties

pursuant to Iowa Code section 135.38 when it finds that the training program, training manager, or other person with supervisory authority over the course has committed any of the following acts:

a. Misrepresented the contents of a training course to the department or to the student population.

b. Failed to submit required information or notifications in a timely manner.

c. Failed to maintain required records.

d. Falsified approval records, instructor qualifications, or other information or documentation related to course approval.

e. Failed to comply with the training standards and requirements in 641—70.4(135).

f. Made false or misleading statements to the department in its application for approval or reapproval which the department relied upon in approving the application.

g. Failed to comply with federal, state, or local lead-based paint statutes and regulations, including the requirements of this chapter.

h. Knowingly made misleading, deceptive, untrue, or fraudulent representations in the practice of conducting a training program or engaged in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.

i. Used untruthful or improbable statements in advertisements. This includes, but is not limited to, an action by a training program making information or intention known to the public that is false, deceptive, misleading, or promoted through fraud or misrepresentation.

j. Falsified reports and records required by this chapter.

k. Accepted any fee by fraud or misrepresentation.

l. Revocation, suspension, or other disciplinary action taken by a certification or licensing authority of this state, another state, territory, or country; or failure by the firm or individual to report such action in writing within 30 days of the final action by such certification or licensing authority. A stay by an appellate court shall not negate this requirement; however, if such disciplinary action is overturned or reversed by a court of last resort, the report shall be expunged from the records of the board.

m. Failed to comply with the terms of a department order or the terms of a settlement agreement or consent order.

n. Failed to respond within 20 days of receipt of communication from the department that was sent by registered or certified mail.

o. Engaged in any conduct that subverts or attempts to subvert a department investigation.

p. Failed to comply with a subpoena issued by the department or failure to cooperate with a department investigation.

q. Failed to pay costs assessed in any disciplinary action.

70.10(4) Complaints and other requests for action under this rule. Complaints regarding a certified lead professional, a certified elevated blood lead (EBL) inspection agency, a certified firm, or an approved course shall be submitted in writing to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075. The complainant shall provide:

a. The name of the certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm and the specific details of the action(s) by the certified lead professional, certified elevated blood lead (EBL) inspection agency, or certified firm that did not comply with the rules; or

b. The name of the lead professional or firm that conducted lead professional activities without the appropriate certification or approval as required by the rules; or

c. The name of the sponsoring person or organization of an approved course and the specific way(s) that an approved course did not comply with the rules; or

d. The name of the sponsoring person or organization that provided a course without the approval required by these rules.

70.10(5) Civil penalties.

a. Before instituting any proceeding to impose a civil penalty under Iowa Code section 135.105A, the department shall serve a written notice of violation upon the person charged. The notice of violation shall specify the date or dates, facts, and the nature of the alleged act or omission with which the person is charged and shall identify specifically the particular provision or provisions of the law, rule, regulation,

certification, approval, or cease and desist order involved in the alleged violation and must state the amount of each proposed penalty. The notice of violation shall also advise the person charged that the civil penalty may be paid in the amount specified therein, or the proposed imposition of the civil penalty may be protested in its entirety or in part, by a written answer, either denying the violation or showing extenuating circumstances. The notice of violation shall advise the person charged that upon failure to pay a civil penalty subsequently determined by the department, if any, unless compromised, remitted, or mitigated, the fee shall be collected by civil action, pursuant to Iowa Code section 135.105A.

b. Within 20 days of the date of a notice of violation or other time specified in the notice, the person charged may either pay the penalty in the amount proposed or answer the notice of violation. The answer to the notice of violation shall state any facts, explanations, and arguments denying the charges of violation, or demonstrating any extenuating circumstances, error in the notice of violation, or other reason why the penalty should not be imposed and may request remission or mitigation of the penalty.

c. If the person charged with violation fails to answer within the time specified in paragraph 70.10(5)*"b,"* an order may be issued imposing the civil penalty in the amount set forth in the notice of violation described in paragraph 70.10(5)*"a."*

d. If the person charged with violation files an answer to the notice of violation, the department, upon consideration of the answer, will issue an order dismissing the proceeding or imposing, mitigating, or remitting the civil penalty. The person charged may, within 20 days of the date of the order or other time specified in the order, request a hearing.

e. If the person charged with violation requests a hearing, the department will issue an order designating the time and place of hearing. The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

f. If a hearing is held, an order will be issued after the hearing by the presiding officer or the department dismissing the proceeding or imposing, mitigating, or remitting the civil penalty.

g. The department may compromise any civil penalty. If the civil penalty is not compromised, or is not remitted by the presiding officer or the department, and if payment is not made within ten days following either the service of the order described in paragraph 70.10(5)*"c"* or *"f,"* or the expiration of the time for requesting a hearing described in paragraph 70.10(5)*"d,"* the department may refer the matter to the attorney general for collection.

h. Except when payment is made after compromise or mitigation by the department of justice or as ordered by a court of the state, following reference of the matter to the attorney general for collection, payment of civil penalties imposed under Iowa Code section 135.105A shall be made by check, draft, or money order payable to the Iowa Department of Public Health.

70.10(6) Appeals.

a. Notice of denial, suspension or revocation of certification, or denial, suspension, revocation, or modification of course approval shall be sent to the affected individual or organization by restricted certified mail, return receipt requested, or by personal service. The affected individual or organization shall have a right to appeal the denial, suspension or revocation.

b. An appeal of a denial, suspension or revocation or other disciplinary action shall be submitted by certified mail, return receipt requested, within 20 days of the receipt of the department's notice to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075. If such a request is made within the 20-day time period, the notice of denial, suspension or revocation or other disciplinary action shall be deemed to be suspended. Prior to or at the hearing, the department may rescind the notice upon satisfaction that the reason for the denial, suspension or revocation or other disciplinary action has been or will be removed. After the hearing, or upon default of the applicant or alleged violator, the administrative law judge shall affirm, modify or set aside the denial, suspension or revocation or other disciplinary action. If no appeal is submitted within 20 days, the denial, suspension or revocation or other disciplinary action shall become the department's final agency action.

c. Upon receipt of an appeal that meets contested case status, the appeal shall be transmitted to the department of inspections and appeals within five working days of receipt pursuant to the rules adopted

by that agency regarding the transmission of contested cases. The information upon which the denial, suspension or revocation is based shall be provided to the department of inspections and appeals.

d. The hearing shall be conducted according to the procedural rules of the department of inspections and appeals found in 481—Chapter 10, Iowa Administrative Code.

e. When the administrative law judge makes a proposed decision and order, it shall be served by restricted certified mail, return receipt requested, or delivered by personal service. The proposed decision and order then becomes the department's final agency action without further proceedings ten days after it is received by the aggrieved party unless an appeal to the director is taken as provided in paragraph 70.10(6)*"f."*

f. Any appeal to the director for review of the proposed decision and order of the administrative law judge shall be filed in writing and mailed to the director by certified mail, return receipt requested, or delivered by personal service within ten days after the receipt of the administrative law judge's proposed decision and order by the aggrieved party. A copy of the appeal shall also be mailed to the administrative law judge. Any request for appeal shall state the reason for appeal.

g. Upon receipt of an appeal request, the administrative law judge shall prepare the record of the hearing or submission to the director. The record shall include the following:

(1) All pleadings, motions, and rulings.
(2) All evidence received or considered and all other submissions by recording or transcript.
(3) A statement of all matters officially noticed.
(4) All questions and offers of proof, objection, and rulings thereon.
(5) All proposed findings and exceptions.
(6) The proposed findings and order of the administrative law judge.

h. The decision and order of the director becomes the department's final agency action upon receipt by the aggrieved party and shall be delivered by restricted certified mail, return receipt requested, or by personal service.

i. It is not necessary to file an application for a rehearing to exhaust administrative remedies when appealing to the director or the district court as provided in Iowa Code section 17A.19. The aggrieved party to the final agency action of the department who has exhausted all administrative remedies may petition for judicial review of that action pursuant to Iowa Code chapter 17A.

j. Any petition for judicial review of a decision and order shall be filed in the district court within 20 days after the decision and order becomes final. A copy of the notice of appeal shall be sent to the department by certified mail, return receipt requested, or by personal service to the Iowa Department of Public Health, Lead Poisoning Prevention Program, 321 East 12th Street, Des Moines, Iowa 50319-0075.

k. The party who appeals a final agency action to the district court shall pay the cost of the preparation of a transcript of the contested case hearing for the district court.

70.10(7) Public notification.

a. The public shall be notified of the suspension, revocation, modification, or reinstatement of course approval through appropriate mechanisms.

b. The department shall maintain a list of courses for which the approval has been suspended, revoked, modified, or reinstated.

c. The public shall be notified of the suspension or revocation of the certification of a lead professional or firm.

d. The department shall maintain a list of lead professionals and firms for which certification has been suspended or revoked.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
USER QUESTIONNAIRE

This questionnaire has been developed for the User of the Phase I Environmental Site Assessment. The "User" is generally the party seeking to use the Phase I ESA pursuant to the Practice E 1527-13 (ASTM E 1527-13) and may include, without limitation, a prospective purchaser or prospective tenant of the property, an owner of the property, a lender, or a property manager.

The User must provide information, if available, to the environmental professional performing the Phase I ESA in the form of responses to the following questions to qualify for Landowner Liability Protections (LLPS) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001. Failure to provide this information, if available, could result in a determination that "all appropriate inquiry" is not complete.

Interviewees are requested to answer the following questions in good faith and to the best of their actual knowledge. The property for which the Phase I ESA is being performed may be referred to as the property or site within this questionnaire.

Project Information

Site Name:

Site Address: 413 10th Ave South

Interviewer:_____

Date of Interview (or date questionnaire completed by Interviewee):_____

Interviewee Information

Interviewee: Tammy S. Johnson

Title: Code Enforcement officer

Company: City of Clinton

Association to Site:
(Check those that apply)

- ☐ Client
- ☐ Site Manager
- ☐ Occupant
- ☑ Government Official
- ☐ Other (define) _____

QUESTIONS FOR THE USER (CLIENT)

Please write your answer indicating yes or no to the following questions, and provide additional detail for "yes" responses.

1) What is the reason why the Phase I ESA is required?
   To Ensure The city has a full overview of The Enviromental issues @ This property

2) What is the current and propose future use of the property?
   Property is currently being used for Storage future would be To have This entire Block Demolished & market For Developemnt

3) Have you engaged a title company or professional to review recorded land title records and lien records? If yes, also describe the review and the results.
   NO

4) Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?
   NO

5) Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?
   NO

6) As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?
   NO

7) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?
   NA

8) Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

(a.) Do you know the past uses of the *property*?

NO

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

NO

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

NO

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

NO

9) As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

NO

CALIFORNIA ALL-PURPOSE ACKNOWLEDGMENT

State of California

County of Contra Costa

On 4-3-08 (Date) before me, Manuel Ramirez, Notary public, (Here Insert Name and Title of the Officer)

personally appeared Donna M Huntley and Jeffrey Roberts Huntley (Name(s) of Signer(s))

who proved to me on the basis of satisfactory evidence to be the person(s) whose name(s) is/are subscribed to the within instrument and acknowledged to me that he/she/they executed the same in his/her/their authorized capacity(ies), and that by his/her/their signature(s) on the instrument the person(s), or the entity upon behalf of which the person(s) acted, executed the instrument.

I certify under PENALTY OF PERJURY under the laws of the State of California that the foregoing paragraph is true and correct.

WITNESS my hand and official seal.

1.0 EXECUTIVE SUMMARY

1.1 Property Description

Impact7G, Inc. (Impact7G) was retained by City of Clinton (User) to conduct a Phase I Environmental Site Assessment (ESA), in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312)) for the property located at 1000-1004 S. 4th Street, Clinton, Clinton County, Iowa 52732 (Property). Any exceptions to, or deletions from, this practice are described in Sections 2.4, 6.1 and 12.0 of this report.

The Property is currently owned by Daniel and Margaret Keis (1000 S. 4th Street), JP Rental Development LLC (1002 S. 4th Street), and SAP Rentals LLC Series 1 (1004 S. 4th Street). The Property is located in a primarily residential/commercial area of Clinton, Iowa (Figure 2, Appendix A). The building at 1000 S. 4th St. consists of an approximate 4,140 square foot commercial building (calculated as two-story building) situated on approximately 0.12 acres of land. The existing structure was originally constructed circa 1864. The building at 1002 S. 4th St. consists of an approximate 5,130 square foot vacant/abandoned commercial building (calculated as two-story building) situated on approximately 0.06 acres of land. The existing structure was originally constructed circa 1868. The building at 1004 S. 4th St. consists of an approximate 4,676 square foot commercial building (calculated as three-story building) situated on approximately 0.05 acres of land. The existing structure was originally constructed circa 1900.

The Property is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' to POB	Commercial
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

The adjacent properties consist of the following:

Direction From Property	Description(s)
North	10th Ave. S. and commercial development
East	S 4th St. followed by undeveloped land
South	Unoccupied commercial building (1006 S. 4th St.) followed by alley, followed by commercial development
West	Alley followed by commercial development and residential development

1.2 Findings/Conclusions

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-13 as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment*."

- One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

- A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a REC to the Property.

- According to historic documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain place subject to the implementation of required controls*."

- Clinton Car Company, identified by Leak #9LTI80, is located 0.041 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2003. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- City of Clinton Property #2, identified by Leak #9LTL91, is located 0.076 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2007. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Public Works Street Division, identified by Leak #8LTB45, is located 0.096 miles east off the Property in a down-gradient location. The site has a regulatory status of "No Further Action" in 1990. Based on the regulatory status and down-gradient location, this LUST

site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hy-Vee Gas, identified by Leak #8LTA62, is located 0.112 miles east-northeast of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2014. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hair-Itage Designs & Raufsenberger Apartments LLC, identified by Leak #9LTL89, is located 0.118 miles south-southwest of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2016. According to the NFA Certificate, residual free product remains onsite. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-13 as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the [P]roperty and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the [P]roperty to any required controls*."

- No HRECs were identified as part of this Phase I ESA.

De Minimis Conditions are defined by the ASTM Standard Practice E1527-13 as "*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies*."

- No De Minimis Conditions were identified as part of this Phase I ESA

Non-Scope ASTM Considerations are described by the ASTM Standard Practice E1527-13 as "*environmental issues or conditions at a Property that parties may wish to assess in connection with commercial real estate that are outside the scope of [ASTM Standard Practice E1527-13].*"

- Two Non-Scope ASTM Considerations were included as part of this Phase I ESA. Impact7G believes, based on the 1864-1900 construction dates of the buildings located on the Property, the risk of Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) exposure is possible. Therefore, further ACM and LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

1.3 Professional Opinion

Based on data gathered during this Phase I ESA, Impact7G believes that further investigation is warranted for the Property at this time. Soil and/or groundwater sampling should be conducted to determine the presence of chemicals of concern, including but not limited to, volatile organic compounds (VOCs), Resource Conservation & Recovery Act (RCRA) Metals, semi-volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), and petroleum contaminates. Additionally, ACM and LBP sampling and testing should be conducted for the structures on the Property if renovation (ACM and LBP) or demolition (ACM) activities are

expected. Please refer to Figure 2 in Appendix A for the location of the identified RECs.

2.0 INTRODUCTION

Impact7G was retained by City of Clinton (User) to conduct a Phase I ESA, in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for AAI (40 CFR Part 312) for the Property located at 1000-1004 S. 4th Street, Clinton, Clinton County, Iowa 52732 (Property). Three addresses/buildings are associated with the Property.

According to the Clinton County Assessor's website, the Property's legal description is as follows:

(1000 S. 4th St) SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB

(1002 S. 4th St.) SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG

(1004 S. 4th St.) SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19

2.1 Scope of Services

The purpose of this assessment is to identify potential environmental liabilities in association with hazardous substances and/or petroleum products at or in the vicinity of the Property. The User contracted with Impact7G to conduct a Phase I ESA for the Property. Impact7G performed or attempted to perform the following services:

- Visual inspection of the Property and adjoining properties
- Interviews with past and present owners, operators, and occupants
- Reviews of historical sources
- Reviews of federal, state, tribal, and local government records
- Vapor Encroachment Screen of the Property

2.2 Significant Assumptions

The following assumption was used in the determination of potential RECs at the Property:

- The Mississippi River is located 0.42 miles east of the Property and flows to the south. Therefore, groundwater at the Property and adjacent properties is assumed to flow east-southeast in the general direction of the Mississippi River and topographically lower elevations.

2.3 Limitations and Exceptions

Any conclusions regarding potential environmental risks or particular events and practices are limited by the quality and quantity of information provided by available historical documents; the visual inspection; available government databases; and interviews with Property owners, Property operators, former Property owners and residents.

Pursuant to Section 13.1.5 of ASTM Standard Practice E1527-13, the following is a list of non-scope considerations that the User may want to assess in connection with commercial real estate transactions. No implication is intended as to the relative importance of inquiry into such non-scope considerations, and this list is not intended to be all-inclusive:

- Asbestos Containing Materials
- Industrial Hygiene

- Biological Agents
- Cultural and Historic Resources
- Ecological Resources
- Endangered Species
- Health and Safety
- Indoor Air Quality
- Property Condition Assessment
- Archeological Review
- Lead-Based Paint
- Lead in Drinking Water
- Mold
- Radon
- Regulatory Compliance
- Wetlands
- Floodplains
- Architectural Review

The information and conclusions presented in this report are based solely on the observations made during the site assessment evaluation and on data provided by others (individuals – entities). Thus, the accuracy of the resulting reporting and conclusions drawn from this information is inherently based on the accuracy of the information that was obtained and provided. The conclusions and opinions stated herein do not represent or warrant that the Property is free from contamination, pollution, or environmental problems. In summary, there is always a possibility that some contamination may be present on the Property of interest which was not discovered or noted during the Phase I ESA activities (walkover inspection, records review) conducted by Impact7G. Therefore, no guarantees or warranties as to the condition of the Property of interest or suitability of Property use for any particular purpose are made or implied by Impact7G.

2.4 Special Terms and Conditions

Contractual terms, conditions, and liability limitations are specified in the contract between the User and Impact7G.

Information used to prepare this report was provided by a number of parties including government agencies, third party vendors, and persons familiar with the site. All information reviewed was not independently verified unless actual knowledge of Property conditions or history indicated obvious inconsistencies or errors.

2.5 User Reliance

This report has been prepared on behalf of and for the exclusive use of City of Clinton (User) solely for use in evaluating the potential “recognized environmental conditions” and is not intended for any other purpose nor the benefit or use of any other person. This report and the findings contained herein shall not in whole or in part, be disseminated or conveyed to any other party, nor used by any other person, in whole or in part, without the prior written consent of Impact7G, except that the report may be conveyed to persons or groups of persons within the government of the City of Clinton.

3.0 PROPERTY DESCRIPTION

3.1 Location and Legal Description

The Property consists of three adjoining parcels with different addresses, legal locations, and ownership.

The parcel located at 1000 S. 4th St. is currently owned by Daniel and Margaret Keis. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 4,140 square foot commercial building (calculated as two-stories) situated on approximately 0.12 acres of land. The existing structure

located on the parcel was originally constructed circa 1864.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB	Commercial

The parcel is grouped with an adjacent property at 413 10th Avenue South by the Clinton County Assessor. The Property is on a distinct lot and the building does not physically connect to the building at 413 10th Avenue South

The parcel located at 1002 S. 4th St. is currently owned by JP Rental Development LLC. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 5,130 square foot commercial building (calculated as two-stories) situated on approximately 0.06 acres of land. The existing structure located on the parcel was originally constructed circa 1868.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential

The parcel located at 1004 S. 4th St. is currently owned by SAP Rentals LLC Series 1. The parcel is located in a primarily mixed residential/commercial/undeveloped area of Clinton, Iowa (Figure 2, Appendix A), and consists of an approximate 4,676 square foot commercial building (calculated as two-stories) situated on approximately 0.05 acres of land. The existing structure located on the parcel was originally constructed circa 1900.

The parcel is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

The Property is located within the NE ¼ of the SW ¼ of Section 7, Township 81 North, Range 7 East in Clinton County, Iowa and is further located at approximately 41° 50' 6.30" North latitude and 90° 11' 36.66" West longitude. Refer to the Property Vicinity Map included in Figure 1, in Appendix A for Property location.

3.2 Current Description(s) of the Property

The Property consists of three commercial buildings (see Photograph 1 in Appendix B). Each building has its own interior character. The building at 1000 S. 4th St. is currently used for siding storage and has some debris and old equipment. The building at 1002 S. 4th St. could not be accessed during this investigation. The building at 1004 S. 4th St. is currently used as a construction company office, a storage area of construction supplies, and residential housing. The buildings have on-street parking to the east and north and a gravel alley to the west.

3.3 Current Description(s) of the Adjoining Properties

The adjacent properties consist of commercial buildings, roads, undeveloped grassland, an alley and residential development. The following table summarizes current uses of the parcels adjoining the Property.

Direction From Property	Description(s)
North	10th Ave. S. and commercial properties
East	S. 4th Street followed by undeveloped land
South	Vacant commercial property followed by an alley followed by commercial properties
West	Alley followed by commercial property followed by residential properties

According to Sanborn fire insurance maps and city directories, an auto body/auto dealership was located adjacent to the Property in a cross-gradient location at 413 10th Avenue South, approximately 70-feet west of the Property. This building currently houses Central Siding Supply. This auto body/auto dealership lasted from circa 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

4.0 USER PROVIDED AND REASONABLY ASCERTAINABLE INFORMATION

Information provided by City of Clinton (User) is reviewed as part of the Phase I ESA process to identify potential RECs associated with the Property. If such information is not provided by the User, Impact7G attempts to review all readily available and easily accessible information. The User Questionnaire is included in Appendix F.

4.1 Title Records

Copies of title documents for the Property were not provided by the User. An online search of the Iowa Land Record website produced a Warranty Deed, Quit Claim Deeds, and a Real Estate Transfer-Groundwater Hazard Statements for the Property which are included in Appendix H. Additional Property information was obtained from the Clinton County Assessor's Office website.

SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' TO POB

SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG

SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 0 BLK 19

4.2 Environmental Liens or Activity and Use Limitations

Environmental liens or activity and use limitations were not provided by the User. An online search of the Iowa Land Records website revealed no environmental liens or activity use limitations.

4.3 Specialized Knowledge

According to the User, no specialized knowledge of the Property or surrounding area was brought forward.

4.4 Valuation Reduction for Environmental Issues

The User is unaware of any valuation reductions for environmental issues, and none have been reported to Impact7G.

4.5 Owner, Property Manager, and Occupant Information

The Property is currently owned by Daniel and Margaret Keis, JP Rental Development LLC, and SAP Rentals LLC Series 1. The Property currently consists of three commercial buildings. These buildings have no managers. Two upstairs apartments at 1002 S. 4th St. are occupied by tenants.

4.6 Reason for Performing Phase I ESA

The User is currently involved in the U.S. EPA Brownfields Assessment Grant Program. This economic redevelopment initiative includes evaluation of abandoned, idle, or under-used commercial and industrial properties where real or perceived contamination is inhibiting the expansion of existing facilities or redevelopment of idle property. The User is evaluating the Property as part of the local need to address brownfields as well as the broader regional redevelopment initiative targeted by the City of Clinton.

4.7 Other

Impact7G reviewed correspondence and reports from the IDNR in regards to the Clinton Car Company LTANK site (also referred to as Time and Tricia Tague), Leak #9LTI80, located at 1100 S. 4th St. in Clinton, Iowa. According to a No Further Action letter dated June 20, 2003, the following was found and recommended:

- Contaminated soil was removed by soil over excavation.
- A “No Action Required” classification was recommended.

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to City of Clinton Property #2 LTANK site, Leak #9LTL91, located at 1101-1105 S 4th St., Clinton, Iowa. According to a No Further Action letter dated February 20, 1007, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports for the IDNR in regards to the Public Works Street Division LTANK site, Leak #8LTB45, located at 920 S. 3rd St. in Clinton, Iowa. According to a No Further Action letter dated December 12, 1990, the following was found and recommended:

- Concentrations of soil gas vapors were below action levels
- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to the Hari-Itage Designs & Raufsenerger Apartments LLC LTANK site, Leak #9LTL89, located at 412 12th Avenue S in Clinton, Iowa. According to a No Further Action letter dated April 25, 2016, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional Information is available in Appendix H.

Impact7G reviewed correspondence and reports from the IDNR in regards to the Hy-Vee Gas LTANK site, Leak #8LTA62, located at 901 S. 4th St. in Clinton, Iowa. According to a No Further Action letter dated September 19, 2014, the following was found and recommended:

- A “No Action Required” classification was recommended

Due to the site status (No Further Action) and cross-gradient location, this LUST site is considered a CREC and is not expected to pose an environmental concern to the Property at this time. Additional information is available in Appendix H.

Impact7G reviewed a Phase I Environmental Site Assessment (ESA) for 1006 S. 4th St., Clinton, Iowa dated February 3, 2017 prepared by Impact7G on behalf of East Central Iowa Intergovernmental Association. According to this report, the following was found and recommended:

- There were four LUST sites located near the Property. These sites included the Clinton Car Company (Leak #9LTI80), Public Works Street Division (Leak #8LTB45), Hair-Itage Designs and Raufsenberger Apartments LLC (Leak #9LTL89), and Hy-Vee Gas (Leak #8LTA62). All four of these sites had recommendations of “No Further Action” and they were considered CRECs that represented no environmental risk to the Property.

- No additional investigations were recommended for the 1006 S. 4th St. property. It was noted, however, that there was potential for Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) given the age of the building.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

The purpose of the records search is to obtain and review data and information that would aid in identifying RECs, CRECs, HRECs, and/or De Minimis Conditions on or in the vicinity of the

Property. Federal, state, and tribal environmental record sources were obtained from Environmental Data Resources Inc (EDR) to at least the minimum search distances established in ASTM Standard Practice E1527-13. Impact7G has reviewed the information from the environmental record sources, and has summarized the information from the federal, state, and tribal environmental record sources search in the following sections. The complete environmental records report is included in Appendix D.

Environmental Records Report Summary						
DATABASE	**RADIUS** (Miles)	**PROPERTY LISTED**	**SITES**	**REC**	**VEC**	**FURTHER ACTION**
Federal Environmental Record Sources:						
NPL	1.00	No	0	No	No	No

5.1.1 Federal NPL Sites

No National Priority List (NPL) sites were identified within the specified search radius.

5.1.2 Federal NPL Delisted Sites

No NPL Delisted sites were identified within the specified search radius.

5.1.3 Federal CERCLIS Sites

No Federal Comprehensive Environmental Response, Compensation, and Liability

Information System (CERCLIS) sites were identified within the specified search radius.

5.1.4 Federal NFRAP Sites

The Environmental Protection Agency (EPA) maintains the CERCLIS No Further Remedial Action Planned (NFRAP) archived sites. Sites identified as NFRAP indicate that, to the best of EPA's knowledge, assessment activities have been completed and no further steps will be taken to list these sites on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later date. This decision does not mean that there is no hazard associated with a given site, but based upon available information, the site is not judged to be a potential NPL site. EDR identified two (2) NFRAP sites within the specified search radius. However, due to insufficient address information, these sites were unable to be located. The NFRAP sites are discussed further in Section 5.1.22.

5.1.5 Federal RCRA COR ACT Sites

No Federal Resource Conservation and Recovery Act (RCRA) Corrective Action (COR ACT) sites were identified within the specified search radius.

5.1.6 Federal RCRA TSD Sites

No Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) sites were identified within the specified search radius.

5.1.7 Federal RCRA GEN Sites

The Environmental Protection Agency (EPA) maintains the Resource Conservation and Recovery Act (RCRA) Info systems, which provides access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HWSA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous wastes as defined by the RCRA. While sites listed within this database represent some form of hazardous waste activity, they have a higher associated risk if determined to be out of compliance or to have violations. Hazardous waste generating (GEN) facilities are categorized based on the quantity of waste they produce: Large Quantity Generator (LQG), Small Quantity Generator (SQG), and Conditionally Exempt Small Quantity Generator (CESQG). EDR identified one (1) GEN site within the specified search radius.

Automotive Finishes, identified by EPA ID IAR000007617, is located 0.08 miles south-southeast of the Property in a cross-gradient location. This site has a regulatory status of "no violations found". Based on the cross-gradient location and regulatory status, the listed GEN site is not considered an environmental concern to the Property at this time.

5.1.8 Federal IC/EC Sites

No Federal Institutional Control/Engineering Control (IC/EC) sites were identified within the specified search radius.

5.1.9 Federal ERNS Sites

No Emergency Response Notification System (ERNS) sites were identified within the specified search radius.

5.1.10 State/Tribal CERCLIS Sites

No State/Tribal CERCLIS sites were identified within the specified search radius.

5.1.11 State/Tribal SWL Sites

The Department of Natural Resources maintains an inventory of Solid Waste Landfill (SWL) sites within the State of Iowa. These sites may be active or inactive facilities, or open dumps that fail to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. Inventoried sites are categorized as: Permitted Solid Waste Disposal Facilities (SWF/LF), Closed Landfills Priority List (LCP), or Unpermitted Facilities (UNPERM LF). EDR identified two (2) SWL sites within the specified search radius.

City of Clinton HRLAP, identified by Facility ID: 23-SDP-06-90, is located 0.347 miles north-northeast of the Property in a cross-gradient location. Impact7G searched the Iowa Department of Natural Resources (IDNR) Contaminated Sites for additional information but no additional information was available. Based on cross-gradient location and distance from the Property, this SWL site is not considered an environmental concern to the Property at this time.

Hawkeye Disposal Services Transfer Station, identified by Facility ID: 23-SDP-09-93, is located 0.377 miles southwest of the Property in a cross-gradient location. The site has a regulatory status of “closed”. Impact7G searched the IDNR Contaminated Sites for additional information but no additional information was available. Based on cross-gradient location and distance from the Property, this SWL site is not considered an environmental concern to the Property at this time.

5.1.12 State/Tribal LTANKS Sites

The Department of Natural Resources maintains a database inventorying Leaking Tanks (LTANKS) sites. Review of this environmental record source includes Leaking Underground Storage Tank (LUST) records and any available records regarding Leaking Aboveground Storage Tanks (LAST). EDR identified fourteen (14) LUST and one (1) LAST sites within the specified search radius.

LTANKS Site Information						
Property Name	**Leak ID**	**Distance (Mi.)**	**Dir.**	**Elev. Diff.**	**Gradient**	**Status**
CLINTON CAR COMPANY	9LT180	0.041	SSE	-1	Cross	NAR
CITY OF CLINTON PROPERTY #2	9LTL91	0.076	SSE	-2	Cross	NAR
PUBLIC WORKS STREET DIVISION	8LTB45	0.097	ESE	-4	Down	NAR

CASEY'S GENERAL STORE #2030	8LTG91	0.453	SW	9	Cross	NAR

NAR= No Action Required

Due to the proximity of sites to the Property, additional information was requested through the IDNR for Clinton Car Company, City of Clinton Property #2, Public Works Street Division, Hair-Itage Design & Raufsenberger Apartments LLC, and Hy-Vee Gas. Based on the additional records review, regulatory status, gradient location, and/or plume maps, these sites are considered to represent CRECs for the Property. These sites are discussed in Section 4.7.

Based on regulatory status, gradient location, and/or distance from the Property, the remaining LTANK sites are not considered an environmental concern to the Property at this time.

5.1.13 State/Tribal Tanks Sites

The Department of Natural Resources maintains a database of registered Underground Storage Tanks (Tanks). Tanks are regulated under RCRA Subtitle I and must be registered with the Department of Natural Resources. EDR identified eleven (11) Tanks sites within the specified search radius.

TANKS Site Information						
Property Name	**Registration ID**	**Distance (Mi.)**	**Dir.**	**Elev. Diff.**	**Gradient**	**Status**
DILLONS ONE STOP	198811393	0.015	NE	0	Cross	Removed (6)

CLINTON GAS & MART	198607955	0.201	N	2	Cross	Removed (6)/ Active (5)
FORMER CLARK AND FORMER WI NORTH	198606997	0.202	WSW	4	Cross	Removed (6)
GO-TANE SERVICE STATIONS INC	198608763	0.205	NNE	-3	Cross	Removed (4)

Clinton Car Company, Public Works Street Division, Hy-Vee Gas, ADM Corn Processing (Former Pillsbury Co Site), Former Clark and Former Wi North, Clinton Gas & Mart, and Go-Tane Service Stations Inc are all identified in Section 5.5.12 and are not considered to represent recognized environmental conditions for the property at this time.

Based on cross/down gradient location, regulatory status, no associated LUST listings, and/or distance from the Property, these Tanks sites are not considered an environmental concern to the Property at this time.

5.1.14 State/Tribal IC/EC Sites

No State/Tribal Institutional Control/Engineering Control (IC/EC) sites were identified within the specified search radius.

5.1.15 State/Tribal VCP Sites

The Iowa Department of Natural Resources (DNR) maintains a list of sites that are participating in a Voluntary Cleanup Program (VCP). EDR identified two (2) VCP sites within the specified search radius.

Benson Oil Company, Former, identified by Facility ID #1277, is located 0.346 miles southwest of the Property in a cross-gradient location. Based on the cross-gradient location and distance from the Property, this VCP site is not considered an environmental concern to the Property at this time.

Jetter Hauling Service/Hawkeye Disposal, identified by Facility ID #787, is located 0.428 miles southwest of the Property in a cross-gradient location. Based on cross-gradient location and distance, this VCP site is not considered an environmental concern to the Property at this time.

5.1.16 State/Tribal Brownfields Sites

The Iowa Department of Natural Resources (DNR) maintains a list of those sites considered to be State/Tribal Brownfields. These sites include properties believed to have contamination, which is hindering their purchase, expansion, or redevelopment. The status of these sites is tracked according to their involvement within the program through assessment, cleanup, or redevelopment. EDR identified one (1) State/Tribal Brownfields site within the specified search radius.

Leland Thompson Properties, identified by EPA ID #803, is located 0.127 miles south-southwest of the Property in a cross-gradient location. Based on the regulatory status of “closed” and cross-gradient location, this State/Tribal Brownfields site is not considered an environmental concern to the Property at this time.

5.1.17 US Brownfields Sites

The Environmental Protection Agency (EPA) maintains a database of EPA Brownfields grant recipients (US Brownfields). The Assessment, Cleanup and Redevelopment Exchange System (ACRES) database tracks information regarding US Brownfields sites and their assessment and cleanup. EDR identified twenty-nine (29) US Brownfields sites within the specified search radius.

US Brownfields Site Information						
Property Name	**Acres ID**	**Distance (Mi.)**	**Dir.**	**Elev. Diff.**	**Gradient**	**Status**
CHARLES AND BARBARA WESTBROOK PROPERTY	15376	0.047	SSE	-1	Cross	Assessment
DELBERT AND COLLEEN TEMPLE PROPERTIES	15377	0.055	S	0	Cross	Assessment
411 & 415 11TH AVENUE SOUTH	15378	0.055	S	0	Cross	Assessment
LIPHARDT PROPERTY	30001	0.061	SSE	-2	Cross	Assessment
FORMER RAIL DEPOT	122744	0.061	SSE	-2	Cross	Assessment
DAIRY QUEEN PROPERTY	15374	0.071	SSW	0	Cross	Assessment
BOSSEN PROPERTIES	15379	0.077	SSW	0	Cross	Assessment

1704 SOUTH 5TH STREET	15384	0.495	SSW	-6	Cross	Assessment

Based on cross-gradient location, regulatory status of “assessment”, and/or distance

from the Property, these US Brownfields sites are not considered an environmental concern to the property at this time.

5.1.18 Other Haz Sites

No Other Hazardous sites were identified within the specified search radius.

5.1.19 Local Land Records

No Local land records sites were identified within the specified search radius.

5.1.20 Spills Sites

No Spills sites were identified within the specified search radius.

5.1.21 Other Sites

The Environmental Protection Agency (EPA) maintains 15 additional databases, which are consolidated within the Other sites environmental record. A comprehensive list of these databases is included within the EDR report in Appendix D. EDR identified two (2) Other sites within the specified search radius.

Clinton IA – Bridge Realignment – Johnson Warehouse, identified as EDR ID #IAR000519553, is a RCRA Non-GEN site located 0.105 miles west-southwest of the Property in a cross-gradient location. Based on the regulatory status and cross-gradient location, the listed site is not considered an environmental concern to the Property at this time.

National Petroleum Inc, identified at EDR #IAR000001388, is a RCRA Non-GEN site located 0.202 miles west-southwest of the Property in a cross-gradient location. Based on the regulatory status and cross-gradient location, the listed site is not considered an environmental concern to the Property at this time.

5.1.22 Unmapped Sites

EDR found two (2) sites within the designated radial distance recommended for investigation under ASTM Standard Practice E1527-13 that were non-geocoded (unmapped). The unmapped sites consists of two (2) SEMS/PRP sites. Further investigation by Impact7G indentified the approximate locations of the sties and respective distances from the Property.

SCHICK (EX) GENERAL HOSPITAL was identified in the SEMS-ARCHIVE database as ID 0703371. This site is positioned approximately 2.75 miles north of the Property in a cross-gradient locaiton. The status of this property is unknown.

AGRICO CHEMICAL COMPANY was identified in the SEMS-ARCHIVE database as ID 0500378. This site is positioned approximately 2.25 miles northeast of the Property in a cross-gradient location. The status of this property is unknown.

Both of the unmmaped sites are located outside the radial distance recommended for investigation under ASTM Standard Practice E1527-13; therefore, given the distance and cross-gradient location, the unmapped sites are not considered an environmental concern to the Property at this time.

5.2 Additional Environmental Record Sources

Additional environmental record sources are potentially used to enhance and supplement the

standard environmental record sources. The following summarizes information obtained from additional sources.

5.2.1 Other Information Reviewed

- Iowa Department of Natural Resources records department
- NRCS Web Soil Survey
- Iowa Department of Natural Resources County Well Index
- Clinton County Assessor's website
- Clinton County Emergency Management records

5.2.2 Public Well Information

The Iowa Department of Natural Resources database was searched by Impact7G. Seven (7) private wells were identified within the 1,000-foot radius of the Property in the Private Well Tracking System. Location accuracy is unknown, but locations are assumed to be ± 55.77 feet. Additional information on the well search is included in Appendix H.

Private Well Site Information					
Well Number	**Distance (Mi.)**	**Dir.**	**Well Depth (ft)**	**Gradient**	**Status**
266339	0.160	SW	19	Cross	Plugged
266340	0.151	SW	16	Cross	Plugged
266342	0.176	SW	16	Cross	Plugged
359720	0.178	WNW	90	Cross	Active
266336	0.165	SW	16	Cross	Plugged
266337	0.162	SW	16	Cross	Plugged
266338	0.138	SW	12	Cross	Plugged

No previously documented wells are present on the Property. Based on the cross-gradient locations and/or distances from the Property, these wells are not considered an environmental concern to the Property at this time.

5.3 Historical Use of Property and Surrounding Area

Historical information for the Property and surrounding area was based on review of reasonably ascertainable historic records. Available historic documentation is included in Appendix C. This information is summarized in the following table:

Approximate Date(s)	Property Description(s)	Surrounding Area Description(s)
1885-1897	Fire insurance maps, USGS topographic maps	**Property:** Commercial **North:** 10th Ave. S. followed by commercial development **East:** S. 4th St. followed by residential development **South:** Commercial development **West:** Residential development
1902-1925	Fire insurance maps, USGS topographic maps	**Property:** Same as above **North:** Same as above **East:** Same as above **South:** Same as above **West:** Mixed commercial and residential development

Approximate Date(s)	Property Description(s)	Surrounding Area Description(s)
1950 -1972	Historic aerial photographs, fire insurance maps, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Same as above **North:** Same as above **East:** S. 4th St. followed by commercial/residential development **South:** Same as above **West:** Residential development
1977-1987	Historic aerial photographs, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Commercial property **North:** Same as above **East:** Same as above **South:** Same as above **West:** Mixed commercial and residential development
1992-2014	Historic aerial photographs, USGS topographic maps, city directories, assessor's information, and interviews	**Property:** Unknown **North:** Same as above **East:** S. 4th St. followed by mixed commercial and residential development **South:** Same as above **West:** Same as above

Based on the review of the above historical records and assessor data, it appears the existing structure located on the Property was constructed circa 1868. According to Sanborn fire insurance maps and city directories, an auto body/auto dealership was located adjacent to the Property in a cross-gradient location at 413 10th Avenue South, approximately 70-feet west of the Property. This auto body/auto dealership lasted from circa 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

5.3.1 Aerial Photographs Information

Impact7G reviewed the following available aerial photographs of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1937 1939 1956 1966 1976 1983	Commercial development	**North:** 10th Ave. S. followed by mixed residential/commercial development **East:** S. 4th St. followed by residential development **South:** Commercial development followed by alley followed by commercial development **West:** Residential development
1994 2005 2008 2011 2015	Same as above	**North:** Same as above **East:** S. 4th St. followed by vacant grass-covered land **South:** Same as above **West:** Commercial development followed by residential development

5.3.2 Fire Insurance Maps Information

A search for fire insurance maps was completed of The Sanborn Library's collection, which includes records from the Library of Congress, University Publications of America, and EDR's Private Collection. Impact7G reviewed the following available fire insurance maps of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1885	Grocer, hardware store, dry goods store	**North:** 10th Ave. S. followed by commercial **East:** S. 4th St. followed by residential **South:** Vacant commercial followed by alley followed by commercial **West:** Alley followed by residential
1890	Grover, warehouse, dry goods store	**North:** Same as above **East:** Same as above **South:** Hardware store/Stauber Mfg. Co. Clothing Factory followed by alley followed by commercial **West:** Same as above
1897	Grocer, hardware store and tin shop, grocery storage	**North:** Same as above **East:** Same as above **South:** Vacant, followed by hardware store and tin shop followed by alley followed by commercial property **West:** Alley followed by vacant parcel followed by residential property
1902	Grocer, hardware store and tin shop, meat market	**North:** Same as above **East:** Same as above **South:** Harness/leather works, followed by hardware store, followed by alley and commercial property **West:** Alley followed by grocer followed by residential property
1909	Saloon, hardware store and tin shop, barber	**North:** Same as above **East:** Same as above **South**: Restaurant followed by hardware store followed by alley and commercial property **West:** Alley followed by hardware store followed by residential property
1917	Grocer/warehouse, hardware store and tin shop, vacant	**North:** Same as above **East:** Same as above **South:** Restaurant and button sorting company followed by alley followed by commercial property **West:** Same as above
1925	Warehouse, commercial and tin shop, commercial	**North:** Same as above **East:** Same as above **South:** Commercial property followed by alley and commercial property **West:** Same as above
1950	Same as above	**North:** Same as above **East:** S. 4th St. followed by filling station **South:** Commercial property followed by alley followed by commercial with

Date(s)	Property Description(s)	Surrounding Area Description(s)
		filling station **West:** Vacant property followed by residential property
1967	Same as above	**North:** Same as above **East:** Same as above **South:** Furniture store/storage followed by commercial property followed by alley followed by commercial with car repair **West:** Same as above

5.3.3 USGS Topographic Maps Information

Impact7G reviewed the following available topographic maps of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1891 1894	Developed land	**North:** Developed land followed by railroad tracks (potential mapping error) **East:** Developed land **South:** Developed land **West:** Developed land followed by railroad tracks (potential mapping error)
1899 1976 1991 2013	Same as above	**North:** Developed land **East:** Developed land followed by railroad tracks **South:** Developed land followed by railroad tracks **West:** Developed land

5.3.4 City Directories Information

Impact7G reviewed the following available city directories of the Property and surrounding area:

Date(s)	Property Description(s)	Surrounding Area Description(s)
1957	Vacant, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Commercial and residential **East:** Phil's Conoco Service Station, insufficient data **South:** Commercial and residential property **West:** Residential property
1961	Easy Wash Laundromat, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Phil's Sinclair Service Station, commercial and residential property **East:** Vacant, insufficient data **South:** Arlo's Friendly Service Gas Station, commercial **West:** Same as above
1967	Easy Wash Laundromat, Calnan and Son Hardware, Rasmussen Beer Distributors	**North:** Sinclair gas station, commercial and residential **East:** Western Oil and Fuel Gas Station, followed by residential property **South:** Commercial property **West:** Same as above
1972	Easy Wash Laundromat,	**North:** Randy's Body Shop, commercial and

Date(s)	Property Description(s)	Surrounding Area Description(s)
	vacant, Unknown	residential property **East:** Western Oil and Fuel Gas Station **South:** Commercial and residential property **West:** Same as above
1977	Easy Wash Laundromat, Calnan and Son Hardware, vacant	**North:** Same as above **East:** Western Division of Continental Oil Gas Station **South:** Same as above **West:** Commercial and residential property
1982	Easy Wash Laundromat, Insufficient data, Turner's Barber Shop	**North:** Same as above **East:** Restaurant **South:** Same as above **West:** Same as above
1987	Insufficient data, apartment above, vacant with apartments above	**North:** Marty's Auto Clinic Auto Repair, commercial and residential **East:** Same as above **South:** Same as above **West:** R & R Limited Auto Sales followed by commercial and residential property
1992	Insufficient data, 123 FixIt Shop and Gary's Barber Shop	**North:** 4th Street Auto Sales, commercial and residential **East:** Restaurant and residential property **South:** Same as above **West:** Quality Auto Body and Sales and residential property
1995	Insufficient data	**North:** Classic Auto Sales and commercial/ residential property **East:** Insufficient data **South:** Commercial property **West:** Commercial and residential property

2005	Insufficient data, Clinton Fellowship Club and Open Door Mission	**North:** Commercial and residential property **East:** Same as above **South:** Same as above **West:** Commercial and residential property
2010	Insufficient data, Tony's Pawn Shop	**North:** Same as above **East:** Same as above **South:** Same as above **West:** Same as above
2014	Insufficient data, apartments above	**North:** Residential property **East:** Same as above **South:** Commercial and residential property **West:** Same as above

According to historical documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. This property was known as R & R Limited Auto Sales and Quality Auto Body and Sales. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and

solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

According to historical documents including Sanborn fire insurance maps and City Directories, an auto repair/gas station/auto sales shop was located approximately 500-feet north of the Property in a cross-gradient location at 927 S. 4th Street from 1961-1995. This property was known as Phil's Sinclair Service, Sinclair Gas Station, Randy's Body Shop, Marty's Auto Clinic Auto Repair, 4th Street Auto Sales, and Classic Auto Sales. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. The site is reported in the LUST database as Hy-Vee Gas, identified by Leak #8LTA62 and is further discussed in Section 1.2.

According to historical documents including Sanborn fire insurance maps and City Directories, an auto service station shop was located approximately 150-feet northeast of the Property in a down-gradient location at 1001 S. 4th Street from 1950-1977. This property was known as Phil's Conoco Service Station, Western Oil Fuel Gas Station, and Western Division of Continental Oil Gas Station. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. The site is also reported in the LUST database as Hy-Vee Gas, identified by Leak #8LTA62 and is further discussed in Section 1.2.

5.3.5 Assessors' Information

The Property is described by the Clinton County Assessor's Office website as:

Parcel #	Location	Description(s)
80-59700000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' W 60' S 12' W 30' N 36' TH E 90' to POB	Commercial
80-59730000	SOUTH CLINTON PRT OF LOTS 9 & 10 BLK 19 COM NE COR LOT 10 TH S 24' TO PT OF BEG TH S 35' W 90' N 23' E 30' N 12' TH E 6; TO PL OF BEG	Commercial, Multi-Residential
80-59740000	SOUTH CLINTON N 25' OF S 81' OF E 40' OF LOT 9 & N 25' OF S 81' OF LOT 10 BLK 19	Commercial

6.0 PROPERTY RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The Property reconnaissance was performed on February 14, 2018 by Impact7G. Based on the developed nature of the Property with three commercial buildings on the parcels, the reconnaissance consisted of a room-by-room inspection. Permission to enter 1002 South 4th Street was not granted, and the interior of the building was not inspected. Buildings and an alley covered the property. These factors, and the presence of snow cover, limited observations of the ground. Investigators also had no access to the roof. There were no additional limiting conditions for the Property or surrounding area during the visit.

6.2 General and Physical Source(s) Setting

Physical setting sources provide information about the geologic, hydrogeologic, hydrologic, and topographic characteristics of the Property. Impact7G reviewed a current *USGS 7.5 Minute Topographic Map* of the Property to assess the approximate migration of any potential RECs, CRECs, or HRECs. Based on observations made during reconnaissance, the Property is generally flat (1-2% slope) with the Property gently sloping to the east-southeast. The Property is located at an approximate elevation of 598 feet above msl. Information on the topographic gradient is also included in Figure 1 of Appendix A.

The Mississippi River is located 0.42 miles east of the Property and flows to the south. Therefore, groundwater at the Property and adjacent properties is assumed to flow east-southeast in the general direction of the Mississippi River and topographically lower elevations.

Impact7G also reviewed web soil survey information through the Natural Resources Conservation Service to obtain a depiction of soil at the Property. The survey indicated the majority of the Property is underlain by Downs silt loam, 5 to 9 percent slopes. The Property consists of three existing commercial buildings on approximately 0.23 acres of land.

The current use of the surrounding area was also observed.

Direction From Property	Description(s)
North	10th Avenue South followed by commercial development
East	South 4th Street followed by undeveloped land
South	Vacant commercial building followed by an alley followed by commercial development
West	Alley followed by a commercial building followed by residential development

Impact7G did not identify any evidence of the Property's or surrounding areas past use(s) during the reconnaissance. Historic city directories indicate that the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. This property was known as R & R Limited Auto Sales and Quality Auto Body and Sales. Currently, it is Central Siding Supply.

6.3 Descriptions of Structures, Roads, Other Improvements on the Property

6.3.1 Descriptions of Structures

The Property is improved with a two-story commercial building that totals approximately 4,140 square feet at 1000 South 4th Street, a two-story commercial building that totals approximately 5,130 square feet at 1002 South 4th Street, and a three-story commercial building that totals 4,676 square feet at 1004 South 4th Street. Both 1000 and 1004 South 4th Street have basements. County Assessor data indicate that 1002 South 4th Street has a basement. Assessor records indicate the buildings were constructed circa 1864, 1868, and 1900 (from north to south). Historic Sanborn maps indicate buildings at this location as early as 1885.

6.3.2 Descriptions of Roads

South 4th Street is located east of the Property. 10th Avenue South is positioned north of the Property. A gravel alley is present west of the Property.

6.3.3 Heating/Cooling System

The building located at 1000 South 4th Street appears to have been heated with a gas heating system, and because of exposed piping, a fuel oil system in the past. The building was not heated at the time of investigation.

The building located at 1002 South 4th Street was not entered due to an inability to get permission to access the building. Therefore, the heating/cooling system is unknown at this building.

The building located at 1004 South 4th Street is heated primarily with a forced air heating system fed by natural gas. Some apartments have electric baseboard heat as well. No cooling systems were identified.

6.3.4 Sewage Disposal

Based on its urban location, the Property is/was assumed to be connected to the city sanitation system. Sewer is connected at 1004 South 4th Street. Sewer is disconnected at 1000 South 4th Street. The status of 1002 South 4th Street is unknown.

6.3.5 Source of Potable Water

Based on its urban location, the Property is/was assumed to be connected to the city potable water system. Water is connected at 1004 South 4th Street. Water is disconnected at 1000 South 4th Street. The status at 1002 South 4th Street is unknown.

6.3.6 Additional Utilities

Based on its urban location, the Property is assumed to be connected to utility systems including electric, city water, city sewer, and natural gas. Gas and water utility access points are located on the west side of the buildings. Electricity is delivered overhead on the west side of the building. Utility connections are adjacent to the buildings.

6.4 Interior and/or Exterior Observations at Property

6.4.1 Hazardous Substances or Petroleum Products In Connection With Identified Uses

No hazardous substances or petroleum products were identified at 1000 South 4th Street during reconnaissance, and no additional information was provided by the User or current owner.

One (1) 5-gallon metal container of mineral spirits was identified in the basement of 1004 South 4th Street. The container is rusting, but no evidence of spills or releases was observed. Based on the nature of the product and the small quality observed, the presence of this chemical is not expected to represent an environmental concern to the Property.

Two (2) 5-gallon plastic containers of floor adhesive was observed in the basement of 1004 South 4th Street. No evidence of spills or releases was observed. Based on the nature of the product and the small quantity observed, the presence of this chemical is not expected to represent an environmental concern to the Property.

Various 1-gallon or less metal and plastic containers of adhesive, paint thinner, lacquer, and epoxy floor coating was observed on the first floor at 1004 South 4th Street. No evidence of spills or releases was observed. Based on the nature of the product and the

small quantity observed, the presences of these chemicals is not expected to represent an environmental concern to the Property.

No other hazardous substances or petroleum products were observed on the Property.

6.4.2 Storage Tanks

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property use, the UST was presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a recognized environmental condition (REC).

6.4.3 Odors

No unusual odors were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.4 Pools of Liquid

No pools of liquid, not attributed to a recent rain event, were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.5 Drums

One (1) 55-gallon metal drum was identified in the basement at 1004 South 4th Street. The drum was empty and in good condition. Because it was empty and in good condition, the drum poses no environmental concerns to the property at this time. No additional information was provided by the User or current owners.

6.4.6 Hazardous Substances or Petroleum Products Containers (Not Necessarily in Connection With Identified Uses)

No hazardous substances or petroleum product containers were observed on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.7 Unidentified Substance Containers

No unidentified substance containers were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.8 Polychlorinated Biphenyls (PCBs)

Impact7G identified numerous fluorescent light ballasts throughout 1004 South 4th Street. Observed ballasts show no evidence of corrosion, damage, or leaks. Therefore, the fluorescent light ballasts are not considered an environmental concern to the Property at this time. No other evidence of equipment likely to contain PCBs, including pole or pad-mounted transformers were observed on the Property or adjacent properties during reconnaissance and no additional information was provided by the User or current owners.

6.4.9 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.10 Stained Soil or Pavement

No stained soil or pavement was observed on the Property during reconnaissance, and no additional information was provided by the User or current owners. Snow cover limited surface examinations of areas around the buildings at the Property.

6.4.11 Stressed Vegetation

No stressed vegetation was found on the Property during reconnaissance, and no additional information was provided by the User or current owners. Snow cover limited surface examinations of areas around the buildings at the Property.

6.4.12 Solid Waste

Dumpsters and trash receptacles for solid waste management were observed on the Property. Dumpsters were located on the west side of the property and consisted of one (1) 4-cubic yard dumpster. Solid waste consisting of metal and general trash was identified at the west side of 1002 South 4th Street during reconnaissance. The specific types of refuse were indeterminate because of snow cover. The observed materials are not considered to represent evidence of a recognized environmental condition. However, the materials outside of dumpsters represent a housekeeping concern and should be removed from the property. No other solid waste was identified on the Property during reconnaissance and no additional information was provided by the User or current owners.

6.4.13 Waste Water

No evidence of waste water was identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.14 Wells

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a recognized environmental concern (REC) to the Property.

Impact7G recommends that any on-site wells be properly decommissioned. No other wells were observed on the Property.

6.4.15 Septic Systems

No evidence of septic systems was identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.16 Stains and Corrosion

No areas of stains or corrosion were identified on the Property during reconnaissance, and no additional information was provided by the User or current owners.

6.4.17 Drains and Sumps

A sump pump was observed along the north wall in the basement of 1004 South 4th Street. It is unclear when the sump pump was installed. According to Mr. Steines, the property owner, this sump pump discharges into the city sewer system. No hazardous substances or petroleum products were noted in the vicinity of the sump pump. Based on the use of the sump pump for storm water runoff, the presence of this sump is not expected to represent a significant environmental concern to the property at this time.

No other drains or sumps were observed at the Property during reconnaissance and no additional information was provided by the User or current owners.

7.0 VAPOR ENCROACHMENT SCREEN

The goal of conducting a Vapor Encroachment Screen (VES) is to determine if a Vapor Encroachment Condition (VEC) on the Property caused by a release of vapors from contaminated soil or groundwater either on or near the Property. A VES is conducted in general conformance with the scope and limitations of ASTM Standard Practice E2600-10. A VES is not a Vapor Intrusion Assessment, which evaluates whether vapors are intruding into and accumulating in buildings and structures, posing a potential risk to human health. A VES evaluates the potential for vapors to encroach upon the Property. A VES is used to determine whether a vapor intrusion assessment is warranted.

7.1 Vapor Encroachment Screen Process

A VES is conducted in two Tiers. A Tier 1 Screening is used to determine if a VEC exists on the Property using information gathered during this Phase I ESA. If the Tier 1 Screen cannot rule out the possibility of a VEC on the Property, then a Tier 2 Screen can be conducted. A Tier 2 Screen reviews reasonably ascertainable soil, soil gas, and/or groundwater data from previously conducted Phase I, Phase II, and other reports to determine whether a VEC on the Property can be ruled out.

7.2 Vapor Encroachment Screening Decision Models

The VES Decision Model (Appendix E) is a tool used by Impact7G to assist in investigating the likelihood a VEC exists on the Property. In addition to the step-by-step process for both a Tier 1 and a Tier 2 Screen, definitions and typical chemicals of concern are listed. The VES Decision Models are provided in Appendix E.

7.3 Vapor Encroachment Screen Conclusions

In conjunction with Practice E1527-13, Impact7G conducted the Vapor Encroachment Screen in accordance with ASTM Standard Practice E2600-10 for the Property located at 1000-1004 South 4th Street, Clinton, Clinton County, Iowa 52732.

This VES has revealed that a Vapor Encroachment Condition (VEC) can be ruled out because a VEC does not or is not likely to exist on the Property.

8.0 INTERVIEWS

8.1 Interviews with Owner

Impact7G spoke with Mr. Dan Keis and Mrs. Margaret (Peg) Keis, owners of 1000 South 4th Street, for additional information regarding the Property. Mr. and Mrs. Keis were unaware of any

environmental concerns with the Property at this time. Contact information for Mr. and Mrs. Keis is available in Appendix F.

The building at 1002 South 4th Street is owned by JP Rental Development LLC. Impact7G was unable to make contact with the property owner. According to the City Engineer, Jason Craft, access to the building was not granted.

Impact7G spoke with Mr. Paul Steines, owner of 1004 South 4th Street, for additional information regarding the Property. Mr. Steines indicated that the sump pump in the basement is connected to the City sewer. Additionally, Mr. Steines indicated that he is unaware of fuel oil tanks existing on the property and found only one potential pipe associated with fuel oil heating during renovations. Mr. Steines is unaware of any environmental concerns with the Property at this time. Contact information for Mr. Steines is available in Appendix F.

8.2 Interviews with Previous Owners
Contact information for previous owners was not reasonably ascertainable by Impact7G.

8.3 Interviews with Managers
There were no managers associated with the Property.

8.4 Interviews with Occupants
No occupants were interviewed at this Property.

8.5 Interviews with State and Local Government Officials
Impact7G contacted Mr. Chance Kness with Clinton County Emergency Management for additional information regarding the Property. Mr. Kness stated that Clinton County Emergency Management is unaware of any pollution, hazardous waste generating activities, violations, remediation efforts, soil/water sampling efforts, well permits, septic tank permits, or septic system and leach field discharges on the Property. Additionally, Mr. Kness found no records of emergency responses within the Clinton County Emergency Management Office. Contact information for Mr. Kness is included in Appendix F.

Impact7G attempted to contact Battalion Chief Jeff Chapman of the Clinton Fire Department to obtain additional information regarding the Property. At the time of this report's completion, a response from the city fire department has not been received. Upon receipt of information that might weigh on this report's findings, Impact7G will issue an addendum. Contact information for Mr. Chapman is included in Appendix F.

8.6 Interviews with Others
There were no other interviews associated with the Property.

9.0 FINDINGS
Based on the available information obtained and reviewed, the findings of this report are as follows:

The following RECs were identified as part of this Phase I ESA:

- One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port is capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or use of the UST was located. Based on the nature of property uses, the UST was

presumably utilized for the storage of heating oil. No documentation of the removal of the UST was found. Based on the lack of information regarding the UST removal, it is possible that a release of heating oil from the UST has resulted in an impact to the subsurface of the Property. It is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

- A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site. However, this basement also contains evidence for an underground storage tank. The combination of a well/cistern and an underground storage tank constitutes a REC to the Property.

- According to historic documents including city directories, the adjacent property to the west was occupied by an auto repair/auto sales shop. This automotive sales and body shop was located approximately 70-feet west of the Property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. This site was not listed on the governmental database report. Therefore, the historic use of this property as an auto sales and body shop represent an REC to the Property.

The following CRECs were identified as part of this Phase I ESA:

- Clinton Car Company, identified by Leak #9LTI80, is located 0.041 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2003. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- City of Clinton Property #2, identified by Leak #9LTL91, is located 0.076 miles south-southeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2007. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Public Works Street Division, identified by Leak #8LTB45, is located 0.096 miles east off the Property in a down-gradient location. The site has a regulatory status of “No Further Action” in 1990. Based on the regulatory status and down-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hy-Vee Gas, identified by Leak #8LTA62, is located 0.112 miles east-northeast of the Property in a cross-gradient location. The site has a regulatory status of “No Further Action” issued in 2014. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- Hair-Itage Designs & Raufsenberger Apartments LLC, identified by Leak #9LTL89, is located 0.118 miles south-southwest of the Property in a cross-gradient location. The site has a regulatory status of "No Further Action" issued in 2016. According to the NFA Certificate, residual free product remains onsite. Based on the regulatory status and cross-gradient location, this LUST site should not pose an environmental concern to the Property at this time and is considered a CREC.

- No HRECs were identified as part of this Phase I ESA.

- No De Minimis Conditions were identified as part of this Phase I ESA.

The following Non-Scope ASTM Considerations were included as part of this Phase I ESA:

- Two Non-Scope ASTM Considerations were included as part of this Phase I ESA. Impact7G believes, based on the circa 1884-1900 construction dates of the structures located on the Property, the risk of Asbestos Containing Materials (ACM) and Lead-Based Paint (LBP) exposure is possible. Therefore, further ACM and LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

10.0 OPINION

It is the opinion of the environmental professionals that information obtained from the historic research of the Property and surrounding Property uses, government databases, the Property reconnaissance, and interviews indicates that presently there are three (3) RECs associated with the property. RECs include the presence of a well/cistern and potential underground storage tank in the basement of 1000 South 4th Street and the use of an adjacent property for an auto body/repair shop and auto sales location. There are two (2) Non-Scope ASTM Considerations associated with the property, including potential for asbestos containing materials (ACMs) and Lead-Based Paint (LBP). The scope, type, and/or extent of these RECs represent an environmental impact and/or potential risk to the Property, which warrants additional investigation to detect the potential presence of hazardous substances or petroleum products.

11.0 CONCLUSIONS

Impact7G has performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 of 1000-1004 South 4th Street, Clinton, Clinton County, Iowa 52732, also identified as Local Parcel Numbers 80-59700000, 80-59730000, and 80-59740000, the Property. Any exceptions to, or deletions from, this practice are described in Sections 2.4, 6.1 and 12.0 of this report. This assessment has revealed evidence of the following RECs in connection with the Property:

- Three (3) RECs at the Property
- Five (5) CREC's near the Property
- Two (2) Non-Scope Considerations were identified on the Property

Based on data gathered during this Phase I ESA, Impact7G believes that further investigation is warranted for the Property at this time. Soil and/or groundwater sampling should be conducted to determine the presence of chemicals of concern, including but not limited to, volatile organic compounds (VOCs), Resource Conservation and Recovery Act (RCRA) Metals, semi-volatile

organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), and petroleum contaminants. Additionally, ACM and LBP testing should be conducted for the buildings on the Property if renovation (ACM and LBP) or demolition (ACM) are expected.

12.0 DEVIATIONS

12.1 Data Failure

As defined by the ASTM Standard Practice E1527-13, a data failure is "*a failure to achieve the historical research objectives…even after reviewing the standard historical sources…that are reasonably ascertainable and likely to be useful."* Impact7G encountered the following data failures while completing this Phase I ESA:

- Not able to acquire historical records prior to 1885 or first developed use.
- Greater than 5-year interval between historical records between years 1925-1950.

12.2 Data Gap

As defined by the ASTM Standard Practice E1527-13, a data gap is "*a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information."* Impact7G encountered the following data gaps while completing this Phase I ESA:

- Access was not granted to the interior of the building located at 1002 South 4th Street at the time this report was completed.
- Roof was inaccessible during site reconnaissance.
- Snow cover inhibited surface visibility surrounding the Property.
- Impact7G was unable to obtain contact information for JP Rental Development LLC regarding the 1002 South 4th Street property. Upon receipt of any pertinent information, Impact7G will issue an addendum.

Overall, the above data failure, data gaps, and deviations are not expected to alter the opinion of this report.

13.0 NON-SCOPE CONSIDERATIONS

As part of the agreed upon Scope of Work with the User, Impact7G completed the following Non-Scope ASTM Considerations:

Consideration:	Y	N	Consideration:	Y	N
Asbestos Containing Materials	X		Lead-Based Paint	X	

13.1 Lead Based Paint

This information is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state or local regulations in regards to lead-containing paints. Structures constructed after 1979 are unlikely to have LBP present. Structures built after 1979, while not expected to, may still contain LBP.

As part of a non-scope ASTM service, Impact7G believes, based on the circa 1864-1900 construction date of the buildings located on the Property, the risk of LBP exposure is

possible. Therefore, further LBP investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

13.2 Asbestos

The information below is for general purposes and does not constitute an asbestos containing materials (ACM) survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM. Although the cutoff date of 1981 is generally accepted for estimating the likelihood that a building contains ACMs, building materials manufactured after 1981, while not expected to, may still contain asbestos.

As part of a non-scope ASTM service, Impact7G believes, based on the circa 1864-1900 construction date of the buildings located on the Property, the presence of ACM is likely. Therefore, further ACM investigation of this Property is warranted if building materials and/or painted surfaces are to be disturbed or renovated.

Property Description: The property contained both industrial and residential development from approximately 1897 to 1909. The industrial use included a coal shed and a wood storage yard. A railroad constructed a passanger rail depot in 1915. Use of the structure as a depot continuted until approximately 1970. Subsequent owners have used the building for commercial-retail purposes since 1970. Melvin L. Liphardt currently owns the property.

Property Description: The site is generally located on the southeast side of the intersection of Liberty Avenue and South 5th Street. The site historically contained various industrial developments including a lumberyard from approximately 1897 to 1902, an engineering company from 1925-1967, an automotive parts company from 1970 to 1980, a metal crafter business from 1985 to 1995 and a metal fabrication shop in 1999. Historical Sanborn maps and an interview with the property owner

SOURCE: US Environmental Protection Agency

indicated the site had a foundry associated with the engine block manufacturers from approximately 1925 until 1980. Additionally, historical Sanborn maps indentify a railroad siding located on the property from 1897 to 1950. The site reconnaissance located the railroad siding but the property owner indicated it had not been used since he purchased the site around 1980. The site reconnaissance identified a large pit associated with the former foundry and numerous unlabeled 55-gallon drums throughout the facility, some of which were bulging.

Past Use: Multistory Not reported
Property Description: The site is generally located on the southeast side of the intersection of Liberty Avenue and South 5th Street. The site historically contained various industrial developments including a lumberyard from approximately 1897 to 1902, an engineering company from 1925-1967, an automotive parts company from 1970 to 1980, a metal crafter business from 1985 to 1995 and a metal fabrication shop in 1999. Historical Sanborn maps and an interview with the property owner indicated the site had a foundry associated with the engine block manufacturers from approximately 1925 until 1980. Additionally, historical Sanborn maps indentify a railroad siding located on the property from 1897 to 1950. The site reconnaissance located the railroad siding but the property owner indicated it had not been used since he purchased the site around 1980. The site reconnaissance identified a large pit associated with the former foundry and numerous unlabeled 55-gallon drums throughout the facility, some of which were bulging.

Track Memo: 03/17/05: ILO participation ltr sent. Response = 5/24/05 (vks).06/28/05: DW snds ltr to Gifford & Rausenberger re both are RP. Share costs for T2. T2 = 10-5. RPs to contac DW by 7-11-05.07/05/05: Tel call from Cindy Gifford to DW stating Rausenberger has said he would split costs 50/50 of Tier 2. DW instructed her to get Seneca proposal approved by both parties and have Seneca advise DNR so we can place on schedule. DW07/06/05: Rec'd letter from Rausenberger Atty, Jim Bruhn, 563 242 6162, acknowledging general agreement to share costs. Also,l states Rausenbergers onl recall one UST removed on their property in 1986, tank empty. No recollection of any USTS removed in 1995 as reported by Seneca based on their conversation with Rausenberger. DW08/01/05: E-mail from Seneca - Rausenberger signed contract. Gifford in contract

Property Description: The parcel totals approximately 0.42 acres with one commercial structure and a parking lot. The structure is used as office space for New Age Builders, Inc., a general contractor, and Mel Foster Company, a realty agency. The structure was previously a Kentucky Fried Chicken (KFC) restaurant. The property was first identified as a residence from circa 1909 through circa 1956. Circa 1960 a restaurant identified as the Golden Point Drive-In occupied the site. The KFC restaurant

Property Description: Property operated as a Petroleum Bulk Storage and distribution facility from 1890s ~ 2003. The property was purchased by Troy Pucket at a tax sale and used as a pallet recycling facility and for automotive repairs. A July 2005 fire distroyed the building and contents. The fire department pushed in the building to prevent collapse. The property has remained unoccupied since that time and became an area dumping ground for tires, chemical containers and unwanted furniture.

Property Description: The property was used for pallet manufacturing for ten years prior to its purchase by Mr. Puckett and prior to that it was a Skelly Oil Company bulk oil station with aboveground storage tanks for oil and diesel and oil storage inside the building in 55-gallon drums. The property has been vacant since July 29, 2005 due to a fire in the site building that resulted in an emergency demolition of the site building immediately thereafter.

Property Description: This is the site of a 6-story office/commercial building, built in 1914. Located in downtown Clinton, the building has been underutilized, and mostly vacant, for the last 20 years. Costs for renovation, including asbestos inspection and abatement to facilitate remodeling, have hindered most purchasers. The non-profit "Rock Island Economic Growth Corporation" seeks to acquire the building, renovate the interior, and market the building for lease as a 28-unit apartment

building, with ground-floor commercial space. As pre-purchase environmental due diligence costs were a large undertaking to begin reviewing the feasibility of renovation investment, 128(a) funds were used to assist the non-profit applicant with this early stage of project review. The non-profit anticipates acquiring the site in late 2014, and upon investment of their own funds, and state and federal tax credit program awards, they will begin renovation in mid-2015.

Property Description: This is the site of a 6-story office/commercial building, built in 1914. Located in downtown Clinton, the building has been underutilized, and mostly vacant, for the last 20 years. Costs for renovation, including asbestos inspection and abatement to facilitate remodeling, have hindered most purchasers. The non-profit "Rock Island Economic Growth Corporation" seeks to acquire the building, renovate the interior, and market the building for lease as a 28-unit apartment building, with ground-floor commercial space. As pre-purchase environmental due diligence costs were a large undertaking to begin reviewing the feasibility of renovation investment, 128(a) funds were used to assist the non-profit applicant with this early stage of project review. The non-profit anticipates acquiring the site in late 2014, and upon investment of their own funds, and state and federal tax credit program awards, they will begin renovation in mid-2015.

Property Description: Residentially developed (c. 1897) with dwelling and automobile garage.
Circa 1917, a coal storage structure was constructed along the south side of the property where the garage was previously occupied. An office for an adjacent coal company was located on the property in 1950. In 1967, an office, storage warehouse and metal contractor storage area was located on the property.

Property Description: Residentially developed (c. 1897) with dwelling and automobile garage. Circa 1917, a coal storage structure was constructed along the south side of the property where the garage was previously occupied. An office for an adjacent coal company was located on the property in 1950. In 1967, an office, storage warehouse and metal contractor storage area was located on the property.

Database Descriptions

NPL: NPL National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices. NPL - National Priority List Proposed NPL - Proposed National Priority List Sites.

NPL Delisted: Delisted NPL The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Delisted NPL - National Priority List Deletions

CERCLIS: SEMS SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. SEMS - Superfund Enterprise Management System

NFRAP: SEMS-ARCHIVE SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site. SEMS-ARCHIVE - Superfund Enterprise Management System Archive

RCRA COR ACT: CORRACTS CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. CORRACTS - Corrective Action Report

RCRA TSD: RCRA-TSDF RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste. RCRA-TSDF - RCRA - Treatment, Storage and Disposal

RCRA GEN: RCRA-LQG RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. RCRA-LQG - RCRA - Large Quantity Generators RCRA-SQG - RCRA - Small Quantity Generators. RCRA-CESQG - RCRA - Conditionally Exempt Small Quantity Generators.

Federal IC / EC: US ENG CONTROLS A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. US ENG CONTROLS - Engineering Controls Sites List US INST CONTROL - Sites with Institutional Controls.

Database Descriptions

ERNS: ERNS Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances. ERNS - Emergency Response Notification System

State/Tribal CERCLIS: SHWS State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state. SHWS - Registry of Hazardous Waste or Hazardous Substance Disposal Sites

State/Tribal SWL: SWF/LF Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites. SWF/LF - Permitted Solid Waste Management Facilities

State/Tribal LTANKS: LUST LAST - Leaking Aboveground Storage Tank Sites. A listing of leaking aboveground storage tank sites. LAST - Leaking Aboveground Storage Tank Sites INDIAN LUST R8 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R10 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R6 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R9 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R4 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R7 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R5 - Leaking Underground Storage Tanks on Indian Land. INDIAN LUST R1 - Leaking Underground Storage Tanks on Indian Land.

State/Tribal Tanks: UST Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program. UST - Underground Storage Tank Data AST - Aboveground Storage Tank Sites. INDIAN UST R5 - Underground Storage Tanks on Indian Land. INDIAN UST R9 - Underground Storage Tanks on Indian Land. INDIAN UST R10 - Underground Storage Tanks on Indian Land. INDIAN UST R4 - Underground Storage Tanks on Indian Land. INDIAN UST R8 - Underground Storage Tanks on Indian Land. INDIAN UST R6 - Underground Storage Tanks on Indian Land. INDIAN UST R1 - Underground Storage Tanks on Indian Land. INDIAN UST R7 - Underground Storage Tanks on Indian Land.

State/Tribal IC / EC: INST CONTROL Sites currently enrolled in the Land Recycling Program that have Institutional Controls. INST CONTROL - Sites with Institutional Controls

State/Tribal VCP: VCP Sites currently enrolled in the Land Recycling Program. VCP - Land Recycling Program Sites

ST/Tribal Brownfields: BROWNFIELDS Brownfields are abandoned, idled, or under-used industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. BROWNFIELDS - Brownfields Site Listing

US Brownfields: US BROWNFIELDS Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs. US BROWNFIELDS - A Listing of Brownfields Sites

Other Haz Sites: US CDL A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. US CDL - Clandestine Drug Labs

Database Descriptions

Local Land Records: LIENS A listing of liens filed with the Iowa Comprehensive Petroleum Underground Storage Tank Fund. LIENS - Liens Filed Listing

Spills: HMIRS Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT. HMIRS - Hazardous Materials Information Reporting System SPILLS - Spills Database. SPILLS 90 - SPILLS90 data from FirstSearch.

Other: RCRA NonGen / NLR RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste. RCRA NonGen / NLR - RCRA - Non Generators / No Longer Regulated FEDLAND - Federal and Indian Lands. TSCA - Toxic Substances Control Act. TRIS - Toxic Chemical Release Inventory System. SSTS - Section 7 Tracking Systems. RAATS - RCRA Administrative Action Tracking System. PRP - Potentially Responsible Parties. PADS - PCB Activity Database System. ICIS - Integrated Compliance Information System. FTTS - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). FTTS INSP - FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act). MLTS - Material Licensing Tracking System. RADINFO - Radiation Information Database. BRS - Biennial Reporting System. INDIAN RESERV - Indian Reservations. US AIRS (AFS) - Aerometric Information Retrieval System Facility Subsystem (AFS). US AIRS MINOR - Air Facility System Data. FINDS - Facility Index System/Facility Registry System.

APPENDIX E

VAPOR ENCROACHMENT SCREEN MODEL WORKSHEETS

Vapor Encroachment Decision Model

Tier 1

Examples of Mitigating Factors

Soil Characteristics = Silty-Clay low permeability soil

Hydraulic barrier = River, wetlands, lake, clean water lens

Physical barriers = Perched water table, impermeable soil layer

Building design = Utility corridor, fractured bedrock, fractured clay

Definitions

TP – Target Property

VEC – Vapor Encroachment Condition – the presence or likely presence of vapors from chemicals of concern (COC) in the surface of the Target Property caused by the release of vapors on or near the Target Property.

AOC – Area of Concern - Petroleum Hydrocarbons = 0.10 or 1/10 of a mile or All other COCs = 0.33 or 1/3 of a mile

COC - Chemical of Concern – chemical that is present in the subsurface environment that can potentially migrate as a vapor into the subsurface of the Target Property.

Vapor Encroachment Decision Model

Tier 2

START

A VEC can be ruled out because a VEC does not or is not likely to exist on the TP.

The release was down-gradient of the Target Property. | The release was cross-gradient of the Target Property. | The release was up-gradient of the Target Property.

YES → A VEC can NOT be ruled out on the TP. **Additional Investigation Warranted**

NO

YES YES

Are any sites within the Critical Distance of the TP?

YES

Conduct an Invasive screening with data collection.

The potential for contamination exists on the Target Property and is considered a REC.

Phase II is Warranted.

NO ← Is there evidence (**previous reports and/or regulatory records**) to indicate the status, size and movement of the contaminant plume and amount of COC concentrations present?

YES

Conduct Non-Invasive data collection
Perform Plume Test

Is the number equal to or greater than the critical distance?

YES → A VEC can be ruled out because a VEC does not or is not likely to exist on the TP.

NO → A VEC can **NOT** be ruled out on the TP. **Additional Investigation Warranted**

Plume Test

Calculate the **lineal distance** from the nearest edge of the plume to the Target Property line.

Lineal distance $= X^2 + Y^2$

X = depth to groundwater
Y = distance from sampling location to the Target Property line.

Critical Distance Calculations

Petroleum Hydrocarbons

Gasoline, Diesel, Oil, or Jet Fuel

30 feet – for dissolved petroleum hydrocarbons.

100 feet – for free product = LNAPL (Light non-aqueous phase liquids)

All other COC's

Chlorinated Solvents, PCB's, or Fuel Oxygenates

100 feet

X6. Typical COC for the Vapor Encroachment Screen

Acenaphthene	Carbon tetrachloride	Dichlorodifluoromethane	Hexane	N-Nitroso-di-n-butlyamine	Trichloroethylene
Acetaldehyde	Chlordane	1,1-Dichloroethane	Hydrogen cuanide	n-Propylbenzene	Trichlorofluromethane
Acetone	2-Chloro-1,3 butadiene(chloroprene)	1,2-Dichloroethane	Isobutanol	o-Nitrotoluene	1,2,3-Trichloropropane
Acetonitrile	Chlorobenzene	1,1-Dichlorethylene	Mercury (elemental)	o-Xylene	1,2,4-Trimetheylbenzene
Acetophenone	Chlorodibromomethane	1,2-Dichloropropane	Methylacylonitrile	p-Xylene	1,3,5-Trimethylbenzene
Acrolein	Clorodifluoromethane	1,3-Dichloropropane	Methoxychlor	Polychloroinated biphenyls (PCB's)	Vinyl acetate
Acrylonitrile	Chloroethane (ethyl chloride)	Dieldrin	Methyl acetate	Pyrene	Vinyl chloride (chloroethene)
Aldrin	Chloroform	Endosulfan	Methyl acrylate	sec-Butlybenzene	
Alpha-HCH (alphaBCH	2-Chlorophenol	Epichlorohydrin	Methyl bromide	Styrene	
Benzaldahyde	2-Chloropropane	Ethyl ether	Methyl chloride (chloromethane)	tert-Butylbenzene	
Benzene	Chrysene	Ethylacetate	Mehtylcyclohexane	1,1,1,2-Tetrachloroethane	
Benzo(b)fluoranthene	Cis-1,2-Dichloroethylene	Ethylbenzene	Methylene bromide	1,1,2,2-Tetrachloroethane	
Benzylchloride	Crotonaldehyde (2-butenal_	Ethylene oxide	Methylene chloride	Tetrachloroethylene (perchloroethylene)	
Beta-Chloronaphthale	Cumene	Ethylmethacrylate	Methylethylketone (2-butanane)	Toluene	
Biphenyl	DDE	Fluorene	Methylisobutylketone	Trans-1,2-Dichloroethylene	
Bis(2-chloroethyl)ether	Dibenzofuran	Furan	Methylmethacrylate	1,1,2-Trichloro-1,2,2,-trifluoroethane	
Bis(2-chloroisopropyl)ether	1,2-Dibromo-3-chloropropane	Gamma-HCH (Lindane)	MTBE	1,2,4-Trichlorobenzene	
Bis(chloromethyl)ether	1,2-Dibromoethane (ethylene	Heptachlor	m-Xylene	1,1,2-Trichloroethane	
Bromodichloromethane	dibromide	Hexachloro-1,3-butadiene	Maphthalene	trifluoroethane	
Bromoform	1,3-Dichlorobenzene	Hexachlorobenzene	n-Butylbenzene	1,2,4-Trichlorobenzene	
1,3-Butadiene	1,2-Dichlorobenzene	Hexachlorocyclopentadiene	Nitrobenzene	1,1,2-Trichloroethane	
Carbon disulfide	1,4-Dichlorobenzene	Hexachloroethane	2-Nitropropane	1,1,1,-Trichloroethane	

APPENDIX F

INTERVIEW DOCUMENTATION

Interview Documentation —1000-1004 South 4th Street, Clinton, IA

Mr. Dan Keis and Mrs. Margaret (Peg) Keis — Owners, 1000 South 4th Street
Phone — (563) 243-4402
Contacted by telephone on February 13, 2018 by Mr. Branden Scott.

Mr. Paul Steines — Owner, 1004 South 4th Street
Phone — (563) 249-3243
Contacted by telephone on February 13, 2018 by Mr. Branden Scott.

Mr. Jeff Chapman, Battalion Chief — Clinton Fire Department
Phone — (563) 242-0125
Email — jchapman@clintonfd.us
Attempted to contact by email on February 9, 2018 by Mr. Branden Scott. Attempted to contact by email again on February 19, 2018 by Mr. Branden Scott. Attempted to contact by telephone on February 20, 2018 by Mr. Branden Scott and left a voice message. Mr. Chapman responded on February 20, 2018 indicating that he would look into the properties. Mr. Scott again contacted Mr. Chapman on February 26, 2018. At the time of this report's completion, a response from the city fire department has not been received. Upon receipt of information that might weigh on this report's findings, Impact7G will issue an addendum.

Mr. Chance Kness, Coordinator — Clinton County Emergency Management
Phone — (563) 242-5712
Email — kness@clintoncounty-ia.gov
Contacted by email on February 9, 2018 by Mr. Branden Scott; response received on February 9, 2018.

JP Rental Development LLC — Owner, 1002 South 4th Street
Contact information for this property owner could not be located. According to the City Engineer, Jason Craft, access to the building could not be arranged.

Phase I Environmental Site Assessment
User Questionnaire
(From Appendix X.3 of ASTM E 1527-13)

In order to qualify for one of the *Landowner Liability Protections (LLP)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries:

Please include any lengthy responses on a separate sheet and refer to the number or letter of the item from this page.

1. Did a search of *recorded land title records* (or judicial records where appropriate) identify any type of environmental liens filed or recorded against the Property under federal, tribal, state or local law? (*Environmental cleanup liens that are filed or recorded against the Property [40 CFR 312.25]*)

   No

2. Did a search of *recorded land title records* (or judicial records where appropriate) identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the Property and/or have been filed or recorded against the Property under federal, tribal, state or local law? (*Activity and use limitations that are in place on the Property or that have been filed or recorded against the Property [40 CFR 312.26(a)(1)(v) and (vi)]*)

   No

3. As the User of this Environmental Site Assessment (ESA), do you have any specialized knowledge or experience related to the Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Property or adjoining properties so that you would have specialized knowledge of the chemicals and processes used by this type of business? (*Specialized knowledge or experience of the person seeking to qualify for the LLP [40 CFR 312.28]*)

   No

4. Does the purchase price being paid for this Property reasonably reflect the fair market value of the Property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Property? (*Relationship of the purchase price to the fair market value of the Property if it were not contaminated [40 CFR 312.29]*)

   No

5. Are you aware of commonly known or reasonably ascertainable information about the Property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

   (a.) Do you know the past uses of the Property? Yes

   (b.) Do you know of specific chemicals that are present or once were present at the Property? No

   (c.) Do you know of spills or other chemicals that have taken place at the Property? No

   (d.) Do you know of any environmental cleanups that have taken place at the Property? No

   (*Commonly known or reasonably ascertainable information about the Property [40 CFR 312.30]*)

6. As the User of this ESA, based on your knowledge and experience related to the Property, are there any obvious indicators that point to the presence or likely presence of contamination at the Property? (*The degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation [40 CFR 312.31]*)

   No

APPENDIX G

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Branden Scott – Environmental Specialist

Mr. Branden Scott is an Environmental Scientist with experience with environmental permitting, Section 106 compliance projects, environmental permitting, and Phase I environmental site assessments in accordance with ASTM 1527-13 standards. Mr. Scott has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, completed interviews, and prepared Phase I ESA reports. He also has significant experience in archaeological/architectural documentation, historic property research, and utilizing surveying equipment including GPS and total stations for field mapping.

Eric Lindeen – Environmental Specialist

Mr. Eric Lindeen is an Environmental Specialist with experience on a variety of environmental projects involving the National Environmental Policy Act (NEPA) process, environmental permitting, wetland delineations, and Phase I environmental site assessments in accordance with ASTM 1527-13 standards. Mr. Lindeen has experience completing site inspection; local, state, and federal environmental database review; historical information review; and conducting interviews. Mr. Lindeen holds a B.A. in Geography from the University of Northern Iowa.

Michael Fisher, REM – Vice Presient/Principal

As Vice President of Impact7G, Mike is responsible for business development, client management, project management, contracts review, and working with the other principals to facilitate change as Impact7G grows in service offerings and client base in the coming years. Mike has 25 years of consulting experience including environmental and energy business line management as well as Board of Director responsibilities at an Engineering News Record (ENR) top 200 engineering design firm. Mike also applies his long-running technical expertise in the renewable energy, brownfields redevelopment, and environmental planning market areas. His environmental experience includes extensive experience with the National Environmental Policy Act (NEPA) and brownfields redevelopment. He is also a multi-media environmental compliance expert. Mike spent much of the last decade continuing to work on environmental projects while also facilitating development of multi-megawatts of distributed wind and solar projects. Consistent with Impact7G's mission, Mike's objective is to foster utilization of our natural resources in a manner that supports a sustainable future for generations ahead.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Clinton County, Iowa
Survey Area Data: Version 23, Sep 26, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 3, 2011—Jul 20, 2016

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
162C2	Downs silt loam, 5 to 9 percent slopes, moderately eroded	0.3	100.0%
Totals for Area of Interest		**0.3**	**100.0%**

Clinton County, Iowa

162C2—Downs silt loam, 5 to 9 percent slopes, moderately eroded

Map Unit Setting

National map unit symbol: 2tc4v
Elevation: 560 to 1,740 feet
Mean annual precipitation: 31 to 39 inches
Mean annual air temperature: 41 to 50 degrees F
Frost-free period: 120 to 190 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Downs, moderately eroded, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Downs, Moderately Eroded

Setting

Landform: Hillslopes
Landform position (two-dimensional): Shoulder, backslope, summit
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Loess

Typical profile

Ap - 0 to 8 inches: silt loam
BE - 8 to 17 inches: silt loam
Bt1, Bt2 - 17 to 33 inches: silty clay loam
Bt3 - 33 to 39 inches: silt loam
BC - 39 to 48 inches: silt loam
C - 48 to 79 inches: silt loam

Properties and qualities

Slope: 5 to 9 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.14 to 1.42 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 11.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Nasset, moderately eroded

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Newvienna, moderately eroded

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Downs

Percent of map unit: 5 percent
Landform: Hillslopes
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

RE: Certificate of No Further Action for a Leaking Underground Storage Tank (LUST) Remediation
Registration Number: 199017193
[redacted]

Dear Mr & Mrs Tague:

Attached to this letter is your No Further Action certificate applicable to the above-referenced underground storage tank (UST) site.

This certificate is valid only for the site referenced on the face of the certificate. This certificate may be filed with the Recorder of the county in which the USTs are located as provided in Iowa Code Section 455B.474(1)(h).

The issuance of this certificate does not prevent the Department from requiring further corrective action at the site if a new petroleum release occurs or if a previously unknown or unforeseen risk condition should arise. The Department is prevented by law from requiring a property owner or responsible party from conducting further corrective action if the only reason is a change in action levels. See Iowa Code section 455B.474 (1)(h)(3).

Property owners who are not owners of USTs at the site and have not been responsible for a new release or aggravation of the historical contamination would not generally be considered responsible for taking corrective action if regulation of the site is reopened in the future. In addition, a state fund has been created which provides discretionary funds for the Department to use if further corrective action is required at the site in the future. See Iowa Code 455G.9(1)(k), as amended by 2000 Iowa Acts, S.F. 2433, Section 15.

This certificate should not be relied upon as a warranty or representation the site is for all purposes and under all circumstances environmentally clean. Residual concentrations of soil or groundwater contamination may remain at the site. Public files are available which better describes the contaminated conditions documented at the site.

If you have any additional questions concerning this certification, please contact the Underground Storage Tank Section of the Iowa Department of Natural Resources at the address given below or you may call 515/281-8941.

Sincerely,

JAMES R. HUMESTON, SUPERVISOR
UNDERGROUND STORAGE TANK SECTION

TAMMY VANDER BLOEMEN 502 E 9th Street, Des Moines, IA 50319 515-281-8957

IOWA DEPARTMENT OF NATURAL RESOURCES

CERTIFICATE OF NO FURTHER ACTION

This document certifies that the referenced underground storage tank site has been classified by the Iowa Department of Natural Resources (IDNR) as "no further action" as provided in 1995 Iowa Code Section 455B.474(1)(h), as amended by 1995 Iowa Acts, H F 508 Section 10. This certificate may be recorded as provided by law.

Owner/Operator of Tank(s):	TIM AND TRICIA TAGUE	
Date of Issuance:	June 20, 2003	
IDNR File References:	Registration Number	199017193
	LUST Number	9LTI80

Legal Description of Underground Storage Tank Site

LOT 8 AND THE NORTH 46 FEET AND 8 INCHES OF LOTS 9 AND 10 IN BLOCK 20 IN SOUTH CLINTON, WITHIN CLINTON, IOWA LOT 8, BLOCK 20, SOUTH CLINTON, WITHIN THE CITY OF CLINTON, IOWA LOTS 7 AND 8 AND THE NORTH 114-2/3RDS' OF LOTS 9 AND 10, IN BLOCK 20 (EXCEPT A PIECE IN THE NE CORNER OF BLOCK 20), IN SOUTH CLINTON WITHIN CLINTON, IOWA

Issuance of this certificate does not preclude the IDNR from requiring further corrective action due to new releases or releases from unknown sources and is based on the information available to date. The department is precluded from requiring additional corrective action solely because government action standards are changed. See Iowa Code Section 455B.474(1)(h), as amended by Iowa Acts, H F 508 Section 10.

This certificate does not constitute a warranty or representation of any kind to any person as to the environmental condition, marketability or value of the above referenced property other than that certification required by 1995 Iowa Acts, H F 508 Section 10.

1.0 EXECUTIVE SUMMARY

The East Central Intergovernmental Association (ECIA) contracted with Impact7G to perform a Phase II Environmental Site Assessment (Phase II ESA) for 1000-1006 South 4th Street in Clinton, Iowa (Property). The objective of this Phase II ESA was to evaluate recognized environmental conditions identified in the February 28, 2018 Phase I Environmental Site Assessment (ESA) completed by Impact7G in conformance with the scope and limitations of ASTM Practice E 1527-13. Recognized Environmental Conditions (RECs) identified in the Phase I ESA requiring additional assessment included:

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port was capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or the date of removal use of the UST was found. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil.. Based on the lack of information regarding the UST removal, a release of heating oil from the UST that has resulted in an impact to the subsurface of the Property cannot be ruled out. Furthermore, it is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site.

According to city directories, an auto repair/auto sales shop was located approximately 70-feet west on the adjacent property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals.. Therefore, the historic use of this property as an auto sales and body shop represent a REC to the Property.

Impact7G's conclusions are rendered in accordance with generally accepted professional standards but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

2.0 INTRODUCTION

2.1 Purpose

The ECIA contracted with Impact7G to perform a Phase II ESA for the Property located at 1000-1006 South 4th Street in Clinton, Iowa (Property). The objective of this Phase II ESA was to evaluate recognized environmental conditions identified in the February 28, 2018 Phase I ESA completed by Impact7G in conformance with the scope and limitations of ASTM Practice E 1527-13. RECs were identified in the Phase I ESA requiring additional assessment. The data gathered during this limited investigation has been compared to the risk-based standards outlined in Iowa Administrative Code (IAC) 567 *Chapter 137: Iowa Land Recycling Program (ILRP) and Response Action Standards.*

2.2 Problem Statement

The RECs identified in the Phase I ESA requiring additional assessment included:

One (1) vent pipe and fill port characteristic of an underground storage tank (UST) was observed in the basement of 1000 South 4th Street. The fill port was capped with a metal fitting on the west wall of the basement. No information regarding the date of installation or the date of removal use of the UST was found. Based on the nature of property uses, the UST was presumably utilized for the storage of heating oil. Based on the lack of information regarding the UST removal, a release of heating oil from the UST that has resulted in an impact to the subsurface of the Property cannot be ruled out. Furthermore, it is possible that the UST remains in place. Based on this information, the former/continued presence of the UST on the subject property represents a REC.

A brick-lined well or cistern was observed in the basement at 1000 South 4th Street. The depth of the well/cistern is unknown, and it is filled with historic debris. The presence of the well/cistern is considered an environmental issue because wells represent a conduit to the subsurface. Historic use of the building suggests that few hazardous chemicals were stored on-site.

According to city directories, an auto repair/auto sales shop was located approximately 70-feet west on the adjacent property in a cross-gradient location at 413 10th Avenue South from 1987-1992. Auto repair shop operations typically involve the use of oils and solvents, and generate waste consisting of used oils and solvents, some of which could contain heavy metals. Therefore, the historic use of this property as an auto sales and body shop represent a REC to the Property.

3.0 BACKGROUND

The Property is located within the SE ¼, NW ¼, SW ¼ Section 6, Township 81 North, Range 7 East and is further located at approximately 41º 50’ 06” North latitude and 90º11’ 36.36” West longitude (see Figure 1, Appendix B).

3.1 Site Characteristics

The Property is located at 1000-1006 South 4th Street in Clinton, Iowa. The Property parcel number, owners, location and description are presented on the following Table 1.

Table 1 – Site Characteristics

Parcel # & Owner	Location	Description(s)
80-59700000, Keis Daniel H & Margaret	413 10 Ave. South	2,160 square ft^2 brick warehouse structure constructed in 1864 (0.05 acres)
80-59730000 JP Rental Development LLC	1002 South 4th Street	2,808 ft^2 two-story brick structure constructed in 1868 (0.064 acres)
80-59740000 Sap Rentals LLC	1004 South 4th Street	5,028 ft^2 three-story brick structure constructed in 1900 (0.052 acres)
8059750000 Series 1 and Widener Donald G	1006 South 4th Street	11,700 ft^2 three-story brick warehouse constructed in 1900 (0.116 acres)

3.2 Principal User

The principal end user of project information is ECIA. Further reliance by others is beyond the scope of this project.

4.0 INVESTIGATION ACTIVITIES

The intent of this Phase II ESA is to evaluate RECs identified in the February 28, 2018 Phase I ESA for the Property. The sampling plan was detailed in a proposal provided to ECIA on October 1, 2018. The proposal recommended advancing three (3) soil borings on the Property for the collection of soil and groundwater samples. Given the site constraints, including a concrete basement floor and sump pit located in the basement 1000 South 4th Street, soil samples were not collected from the area of the fuel oil UST and sump pit. On October 29, 2018, five (5) soil borings SB-1, SB-2, SB-3, SB-4 and SB-5 were advanced to a maximum dept of 12-feetbgs using a track mounted, direct push Geoprobe® drill rig. SB-1 was advanced near the Property boundary; SB-3 was advanced on the southwest corner of the Property; SB-3 was advanced on the southwest corner of the Property; SB-4 was advanced on the east side of the Property; and SB-5 was advanced near the northeast corner of the Property (See Figure 2 in Appendix B).

Soil samples were collected using a direct-push Geoprobe® with acetate liners. Soil samples were collected, bagged and screened in two-foot intervals for volatile organic compounds (VOCs) using a photoionization detector (PID). PID readings were used to select the sample intervals to be submitted for laboratory analysis. The interval with the highest PID reading was sampled and submitted for laboratory analysis. For VOCs analyses, if there are no PID readings above ppm, or there are no obvious visual indicators of contamination, the soil samples were collected just above the perceived groundwater table. Surface soil samples from each soil boring location were collected from 0 to 2-feet bgs and submitted for laboratory analysis of Resource Conservation and Recovery Act

(RCRA) metals using EPA Methods 6010C and 7471B/6020A and 7470A. Soil samples were collected at the depth of the perceived groundwater table from 7 to 9-feet bgs from soil boring locations SB-2 through SB-5 for analysis of VOCs by EPA Method 8260C, semi-volatile organic compounds (SVOCs) by EPA Method 8270D and total extractable hydrocarbons (TEHs) by Iowa Method OA-2. Groundwater was not detected in SB-1 and therefore a soil sample from the 7 to 9-feet bgs interval was not collected.

Following the completion of soil sampling, each soil boring was converted into temporary monitoring wells utilizing 1-inch diameter polyvinyl chloride (PVC) screen and riser. Enough volumes of groundwater for collection did not recharge into any of the temporary groundwater monitoring wells constructed at the Property during the October 29, 2018 investigation, thus groundwater was collected as part of this assessment. Each of the well casings were removed from each soil boring location and were then subsequently backfilled with granular bentonite.

4.1 Soil Assessment

Subsurface conditions generally consisted of fine to course alluvial sand with silt underlain with dolomitic limestone between 10 and 12-feet bgs. Groundwater was detected in fine to course sand and gravel alluvial deposits located between 7 and 8-feet bgs. No petroleum odors were detected, and no visible petroleum staining was observed in any of the soil borings. In addition, all PID measurements registered 0.0 ppmv by volume. Soil boring logs are included in Appendix D. The following table summarizes those analytical constituents detected above their respective laboratory reporting limits. The detected concentrations were below the most restrictive ILRP SWS for soil. Complete laboratory analytical reports are included in Appendix C.

Table 2 – Soil – RCRA Metals (mg/Kg)

Constituent	SB-1 0-2-feet	SB-2 0-2-feet	SB-3 0-2-feet	SB-4 0-2-feet	SB-5 0-2-feet	Protected Statewide Standard For Soil
RCRA Metals						
Arsenic	<11.3	**13.3**	<3.48	<7.98	<3.46	**17**
Barium	**54.6**	**149**	**52.5**	**28**	**59.8**	**15,000**
Cadmium	<2.81	2.27	<0.871	<1.99	<0.864	**70**
Chromium	**9.46**	**13.8**	**11.8**	**8.25**	**12.7**	**190**
Lead	**89.2**	**242**	**5.20**	<9.97	**26.6**	**400**
Mercury	**0.165**	**0.843**	<0.0186	0.0593	**0.158**	**23**

Bold results indicate analytical results greater than laboratory's method of detection and/or reporting limit.
Shaded results indicate analytical results that exceed the Protected Statewide Standard
NE = Not Established
NT=Not Tested

4.2 Groundwater Assessment

Upon completion of soil sampling activities, each soil boring was converted into temporary groundwater monitoring wells completed with a 1-inch inside diameter (ID) PVC riser and 1" ID 0.01" slotted PVC pipe screen. Moist sand with silt was encountered between 7 and 8-feet below grade; however, enough volumes of groundwater for collection did not recharge into any of the temporary groundwater monitoring wells constructed at the

Property during the October 29, 2018 investigation, thus groundwater was collected as part of this assessment.

5.0 DEVIATIONS FROM SCOPE

Site constraints including a concrete basement floor and sump pit located in the basement 1000 South 4th Street, soil samples were not collected from the area of the fuel oil AST and sump pit.

6.0 FINDINGS AND CONCLUSIONS

The detected RCRA metals concentrations from soil samples collected at the Property were below the most restrictive DNR ILRP SWS for soil or below laboratory reporting limits.

7.0 RECOMMENDATIONS

Based on the findings and conclusions resultant of data collected during this Phase II ESA, no further action is recommended apart from additional investigation in the Property basement to further evaluate the presence of a suspected UST. Impact7G's conclusions are rendered in accordance with generally accepted professional standard but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

APPENDIX A

Qualifications

Project Qualifications

Michael Fisher, REM – *Principal*

As Vice President of Impact7G, Mike is responsible for business development, client management, project management, contracts review, and working with the other principals to facilitate change as Impact7G grows in service offerings and client base in the coming years. Mike has 25 years of consulting experience including environmental and energy business line management as well as Board of Director responsibilities at an Engineering News Record (ENR) top 200 engineering design firm. Mike also applies his long-running technical expertise in the renewable energy, brownfields redevelopment, and environmental planning market areas. His environmental experience includes extensive experience with the National Environmental Policy Act (NEPA) and brownfields redevelopment. He is also a multi-media environmental compliance expert. Mike spent much of the last decade continuing to work on environmental projects while also facilitating development of multi-megawatts of distributed wind and solar projects. Consistent with Impact7G's mission, Mike's objective is to foster utilization of our natural resources in a manner that supports a sustainable future for generations ahead.

Amber Haukedahl – *Environmental Specialist*

Amber is an Environmental Specialist with experience on a variety of environmental projects including, but not limited to, Phase 1 Environmental Site Assessments, assisting in sampling for Phase II projects, wetland delineations, cultural surveys, and conducting avian and plant surveys. Mrs. Haukedahl holds an M.S. degree in Conservation Biology with many years of extensive field experience. Mrs. Haukedahl has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, and completed interviews. Mrs. Haukedahl is certified as a Lead Risk Assessor in Minnesota and Iowa.

James Goodrich - Senior Environmental Specialist

Mr. Goodrich has 18 years of consulting experience in the environmental industry and has worked on a variety of projects including Phase I Environmental Site Assessments, Phase II Environmental Site Assessments, asbestos inspections and reporting, lead based paint inspections, wetland delineation and mitigation planning, threatened and endangered species assessments, contaminant risk based corrective action assessments, environmental reconnaissance and permitting, and petroleum spill mitigation management services. Mr. Goodrich has facilitated multiple remedial investigations and environmental permitting projects, with specific responsibilities in budget preparation and review, project reporting, acting as liaison between regulatory agencies and the client, and conducting quality review and assurance.

Detection Summary

Client: Impact7G, Inc
Project/Site: 1000-1006 South 4th Street

TestAmerica Job ID: 310-142789-1

Client Sample ID: SB-1 0-2 — Lab Sample ID: 310-142789-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	54.6		2.81		mg/Kg	3	☼	6010C	Total/NA
Chromium	9.46		2.81		mg/Kg	3	☼	6010C	Total/NA
Lead	89.2		14.1		mg/Kg	3	☼	6010C	Total/NA
Mercury	0.165		0.0195		mg/Kg	1	☼	7471B	Total/NA

Client Sample ID: SB-2 0-2 — Lab Sample ID: 310-142789-3

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	13.3		7.36		mg/Kg	2	☼	6010C	Total/NA
Barium	149		1.84		mg/Kg	2	☼	6010C	Total/NA
Cadmium	2.27		1.84		mg/Kg	2	☼	6010C	Total/NA
Chromium	13.8		1.84		mg/Kg	2	☼	6010C	Total/NA
Lead	242		9.20		mg/Kg	2	☼	6010C	Total/NA
Mercury	0.843		0.254		mg/Kg	10	☼	7471B	Total/NA

Client Sample ID: SB-2 7-9 — Lab Sample ID: 310-142789-5

No Detections.

Client Sample ID: SB-3 0-2 — Lab Sample ID: 310-142789-6

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	52.5		0.871		mg/Kg	1	☼	6010C	Total/NA
Chromium	11.8		0.871		mg/Kg	1	☼	6010C	Total/NA
Lead	5.20		4.35		mg/Kg	1	☼	6010C	Total/NA

Client Sample ID: SB-3 7-9 — Lab Sample ID: 310-142789-8

No Detections.

Client Sample ID: SB-4 0-2 — Lab Sample ID: 310-142789-9

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	28.0		1.99		mg/Kg	2	☼	6010C	Total/NA
Chromium	8.25		1.99		mg/Kg	2	☼	6010C	Total/NA
Mercury	0.0593		0.0195		mg/Kg	1	☼	7471B	Total/NA

Client Sample ID: SB-4 7-9 — Lab Sample ID: 310-142789-11

No Detections.

Client Sample ID: SB-5 0-2 — Lab Sample ID: 310-142789-12

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	59.8		0.864		mg/Kg	1	☼	6010C	Total/NA
Chromium	12.7		0.864		mg/Kg	1	☼	6010C	Total/NA
Lead	26.6		4.32		mg/Kg	1	☼	6010C	Total/NA
Mercury	0.158		0.0222		mg/Kg	1	☼	7471B	Total/NA

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Impact7G, Inc
Project/Site: 1000-1006 South 4th Street

TestAmerica Job ID: 310-142789-1

Client Sample ID: SB-5 7-9 — Lab Sample ID: 310-142789-14

No Detections.

Client Sample ID: Duplicate — Lab Sample ID: 310-142789-15

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Barium	98.9		2.03		mg/Kg	2	☼	6010C	Total/NA
Cadmium	2.85		2.03		mg/Kg	2	☼	6010C	Total/NA
Chromium	10.7		2.03		mg/Kg	2	☼	6010C	Total/NA
Lead	157		10.1		mg/Kg	2	☼	6010C	Total/NA

This Detection Summary does not include radiochemical test results.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: Impact TG

City/State: Coralville, IA | Project: 1000-1006 South 4th St

Receipt Information

Date/Time Received: 1/03/18 1410 | Received By: TO

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee ☐ TA Courier ☐ TA Field Services ☑ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID: 35016

Multiple Coolers? ☐ Yes ☑ No *If yes:* Cooler # ____ of ____

Cooler Custody Seals Present? ☑ Yes ☐ No *If yes:* Cooler custody seals intact? ☑ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☑ No

Trip Blank Present? ☐ Yes ☒ No *If yes:* Which VOA samples are in cooler? ↓

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: N | Correction Factor (°C): 0.0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 1.4 | Corrected Temp (°C): 1.4

• **Sample Container Temperature**

Container type(s) used:

Uncorrected Temp (°C): | Corrected Temp (°C):

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding. If no, proceed with login

Additional Comments

* Sample ID SB-3 0-2, SB-4 0-2, SB-5 0-2 does not match COC. All samples are labled SB-3 1-2 SB-4 1-2 SB-5 1-2

List Source: TestAmerica Cedar Falls

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

APPENDIX D

Borelogs/Monitoring Well Construction Details

Soil Boring Log And Monitoring Well Construction Diagram for: SB-1

Facility Name: 1000-1006 4th Street South	UST Registration No.: NA	LUST No.: NA
Well Contractor Name: Impact7G	Drilling Method**: Direct Push	
Well Contractor Registration Number: 11103	Boring Depth (ft) x Diameter (in): 11 x 3.0	
Logged by: James Goodrich	Ground Surface Elevation (ASL):	
Start Date: 10.29.18 / Finish Date: 10.29.18	Top of Casing Elevation (ASL):	

Depth (feet)	Well Construction Details	Sample No.	Sample Type*	PID / FID PPM	USCS	Sample Descriptions: soil, color, classification, observation Example: Silty clay, dark gray, hard, moist, strong odor
0	Temporary Well 0-1': SCH 40 1" ID PVC 1-11': 0.01" slotted SCH 40 PVC (removed and backfilled with granular bentonite)	1	CC	0.0	GM	Crushed limestone surface
1				0.0	SW	Fine to course sand with trace gravel, loose, dry
2				0.0	SW	
3				0.0	SW	
4				0.0	SM	Fine sand with silt, medium dense, dark brown, dry
5				0.0	SM	
6				0.0	SM	
7				0.0	SM	
8				0.0	SM	
9				0.0	SM	
10				0.0	SM	
11	Probe refusal encountered at 11.1-feet bgs at the Dolomitic limestone bedrock horizon. Groundwater tot encountered while probing.				BR	Yellowish orange dolomitic bedrock rock flour and gravel

* Sample Types:	** Drilling Method Options:	Symbols to Use:
Split Spoon (SS) Continuous Core (CC)	Rotary Auger, Push Probe, Hand Auger, Air drilling, Hollow Stem Auger, Other (Describe)	v – Static Water Level s – sample collected bgs-below ground surface

Observation Date:	10.29.18				
Time	13.20				
Static Water Level (ASL)	Dry				

Soil Boring Log And Monitoring Well Construction Diagram for: SB-2

Facility Name: 1000-1006 4th Street South	UST Registration No.: NA	LUST No.: NA
Well Contractor Name: Impact7G	Drilling Method**: Direct Push	
Well Contractor Registration Number: 11103	Boring Depth (ft) x Diameter (in): 12 x 3.0	
Logged by: James Goodrich	Ground Surface Elevation (ASL):	
Start Date: 10.29.18 / Finish Date: 10.29.18	Top of Casing Elevation (ASL):

APPENDIX E

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS AND ENVIRONMENTAL PROFESSIONAL STATEMENT

ENVIRONMENTAL PROFESSIONAL STATEMENT

I, Krista A. Brodersen, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Krista A. Brodersen
Senior Project Manager

Krista Brodersen

Senior Project Manager, Blackstone Environmental
514 17th Street, Box, 206
Moline, Illinois 61265

EDUCATION
B.S. Environmental Science, Southern Illinois University, 1996

CERTIFICATIONS
- 40-HR HAZWOPER
- 8-HR HAZWOPER Supervisor
- CPR and First Aid

WORK HISTORY
Blackstone Environmental, Senior Project Manager, October 2019 – present

Terracon Consultants, Senior Project Manager, 2013 – 2019

Union Bank, Assistant Vice President, 2010 – 2013

Ninyo & Moore, Senior Project Manager, 2003 – 2010

ATC Associates, Senior Staff Scientist, 2001 – January 2003

American Integrated Services, Assistant Project Manager, March 2001 – July 2001

Ceres Associates, Environmental Specialist, 1999 – 2001

PROFESSIONAL EXPERIENCE

Ms. Brodersen has more than 20 years of environmental consulting experience including Phase I ESAs, Phase II Investigations, environmental cleanups, remediation system installation and monitoring, indoor air quality investigations, NEPA compliance, underground storage tank closures, and RBCA assessments. She has conducted work under the Illinois Environmental Protection Agency (IEPA), Iowa Department of Natural Resources (IDNR), California Underground Storage Tank (UST) Cleanup Fund, the California Regional Water Quality Control Board (CRWQCB), California Department of Toxics and Substances Control (DTSC), the California Integrated Waste Management Board (CIWMB), and various voluntary remediation programs and brownfield programs. She manages and supports projects for public, private, and industrial sector clients.

PROJECT EXPERIENCE

Phase I Environmental Site Assessments: Ms. Brodersen has been responsible for performing and reviewing Phase I ESAs on multiple sites throughout the United States under the provisions of ASTM E-1527-05 and ASTM E-1527-13. The Phase I ESA reports were conducted for various financial institutions, government agencies, land developers, and private buyers. Sites have included residential, commercial, and industrial properties. Ms. Brodersen has completed over 300 hundred Phase I ESAs in Iowa since 2013.

Phase II Investigations: Ms. Brodersen has managed and conducted Phase II subsurface investigations for industrial, commercial, and residential properties utilizing various technologies including hand-auger, hollow-stem and direct-push drilling methods. She has experience pertaining to soil and groundwater impacted by various contaminants including petroleum hydrocarbons, chlorinated and non-chlorinated solvents, pesticides, polychlorinated bi-phenyls (PCBs), and Resource Conservation and Recovery Act (RCRA) metals. The investigations have included sampling and profiling of excavated contaminated soil for off-site disposal at licensed facilities. Ms. Brodersen has completed over a hundred Phase II Investigations in Iowa since 2013.

Phase II Investigation, Davenport, IA: A Phase II investigation was conducted to assess a former manufacturing/gasoline station property in Davenport, Iowa. The Phase II included conducting a geophysical survey and collection of soil, groundwater, and soil vapor samples from in and outside of the site buildings. The investigation identified lead and semi-volatile organics in soil and volatile organics in the soil vapor. The overall proposed remedial alternatives included excavation of impacted soil and vapor mitigation at the site buildings.

Voluntary Cleanup Programs: Ms. Brodersen has worked on several Site Remediation Program (SRP) projects for private clients In Illinois. These projects have included all aspects of the SRP program including preparing applications, completing Phase I ESAs, preparing work plans, completing site investigation field activities and reporting, contaminant modeling, preparing risk-based corrective action reports, and IEPA coordination.

Risk-based Clean Up: Managed the investigation and remediation of a former gasoline station property in Moline, Illinois. The site was impacted by petroleum hydrocarbons and metals from the former gasoline station and buried garbage found on the site. Excavated and removed approximately 700 tons of impacted soil and buried garbage, sampling of clean import backfill to 25 feet, and soil confirmation sampling. Prepared Site Investigation Report, Remedial Action Report, Remedial Action Plan, and Remedial Action Completion Report that were approved by the IEPA. Obtained site closure from the IEPA.

Environmental Site Closure and Remediation: Managed oversight of Remedial Action Plan (RAP) implementation at a six-acre property identified by the Los Angeles Unified School District as a potential future school site. The site was impacted with elevated levels of tetrachloroethene (PCE) in soil vapor. The project consisted of oversight and monitoring of the excavation of approximately 75,000 tons of impacted soil, sampling of excavated material, sampling of clean import backfill to 25 feet, soil and soil vapor confirmation sampling, dust monitoring, risk assessment, installation of sixteen vapor cutoff wells between the school and the upgradient adjacent PCE source, and appropriate waste characterization based on sample results. During RAP implementation, three USTs, two pressure vessels, a buried 55-gallon drum, clarifier, hydraulic hoist, sump, and soil impacted by organochlorine pesticides were discovered and removed. The property was granted regulatory closure and a school was constructed onsite.

Environmental Remediation: Oversaw soil sampling, soil vapor sampling, the installation and development of numerous groundwater monitoring wells, conducting quarterly groundwater monitoring, and installation and maintenance of a remediation system for a commercial property formerly occupied by two separate gasoline stations. Ms. Brodersen also managing staff during quarterly monitoring of the property, reviewed quarterly reports, and interacted with the State regulatory agencies. The site was under the oversight of the CRWQCB and was included in the in the California UST Cleanup Fund.

Superfund Site: Assisted with the management of the remediation of a pesticide contaminated Superfund Site in Riverside, California. Her duties at the Superfund site included health and safety monitoring, collecting soil samples, preparation of analytical data, coordination of construction workers, client interface, preparation of hazardous waste manifests, coordination of vendors, and preparation of site maps and data tables.

Environmental Assessments (EAs)/HUD Checklists: Performed EAs/HUD Checklists on several properties throughout Iowa. These assessments included determining the effect of additions and new structures on the environment utilizing information from available sources such as, endangered species reports, wetlands determination, FCC regulations, and listed tribal and regulatory databases, State and Federal regulatory agencies.
